

CONTENTS

Contributors	xxi
Foreword	xxix
Preface to the Second Edition	xxxi
Preface to the First Edition	xxxiii
Tissue Engineering in Perspective	xxxv
<i>Eugene Bell</i>	
Origins of Tissue Engineering	xxxv
The Tissue Engineering Triad	xxxv
What Parts of the Body Can Tissue Engineering Replace?	xxxvi
Acellular Prostheses	xxxvii
The Relevance of Developmental Biology	xxxvii
Can Nature Be Imitated?	xxxviii
The Need for Vascularization <i>in Vitro</i> and <i>in Vivo</i>	xxxix
Stem Cells	xxxix
Cell Signaling	xxxix
Looking Forward	xl
References	xl
Introduction to Tissue Engineering	1
1. The History and Scope of Tissue Engineering	3
<i>Joseph P. Vacanti and Charles A. Vacanti</i>	
Introduction	3
Scientific Challenges	4
General Scientific Issues	6
Social Challenges	6
References	7
2. The Challenge of Imitating Nature	9
<i>Robert M. Nerem</i>	
Introduction	9
Cell Technology	10
Construct Technology	12
Integration into the Living System	13
Concluding Discussion	14
References	15
Part I. The Basis of Growth and Differentiation	17
3. Organization of Cells into Higher Ordered Structures	19
<i>Carol A. Erickson</i>	
Introduction	19
Cellular Changes Involved in the EMT	20
Stimuli of the Transformation	24
Conclusion	26
References	27
4. Dynamics of Cell-ECM Interactions	33
<i>Manuela Martins-Green</i>	
Introduction	33
Composition and Diversity of the ECM	34
Receptors for Extracellular Matrix Molecules	34

Cell-ECM Interactions.....	36
Signal Transduction Events during Cell-ECM Interactions.....	42
Relevance for Tissue Engineering	46
References.....	48
5. Matrix Molecules and Their Ligands	57
<i>Björn Reino Olsen</i>	
Introduction	57
Fibrillar Collagens: Major Scaffold Proteins in the ECM.....	58
Elastic Fibers and Microfibrils.....	63
Fibronectin: A Multidomain, Multifunctional Adhesive ECM Glycoprotein	63
Laminins: Large, Adhesive Basement Membrane Molecules	64
Modulators of Cell-Matrix Interactions.....	66
Proteoglycans: Multifunctional ECM and Cell Surface Molecules..	67
Summary	68
References.....	68
6. Inductive Phenomena	73
<i>Matthias Hebrok and Douglas A. Melton</i>	
Introduction	73
Epithelial to Mesenchymal Signaling in Endoderm Development ...	73
Lung Development and Instructive Signaling.....	73
Permissive Signaling during Pancreas Development	75
References	78
7. Morphogenesis and Tissue Engineering	81
<i>A. H. Reddi</i>	
Introduction	81
Bone Morphogenetic Proteins	82
Cartilage-Derived Morphogenetic Proteins	84
Pleiotropy and Thresholds	85
BMPs Bind to Extracellular Matrix	85
BMPs: Actions Beyond Bone	85
BMP Receptors.....	85
Responding Stem Cells	86
Morphogens and Gene Therapy.....	87
Biomimetic Biomaterials.....	87
Tissue Engineering of Bones and Joints.....	88
Future Challenges	88
References	89
8. Cell Determination and Differentiation.....	93
<i>Leon W. Browder</i>	
Introduction	93
Roles of MRFs during Embryogenesis.....	94
Initiation of Skeletal Muscle Development.....	95
References.....	96
Part II: <i>In Vitro</i> Control of Tissue Development	99
9. Mechanical and Chemical Determinants of Tissue Development	101
<i>Donald E. Ingber</i>	
Introduction	101

Extracellular Matrix Structure and Function	101
Pattern Formation through ECM Remodeling.....	104
Mechanochemical Switching between Growth and Differentiation	105
Summary	107
References	108
10. Animal Cell Culture.....	111
<i>Gordon H. Sato and David W. Barnes</i>	
References	116
11. Regulation of Cell Behavior by Matricellular Proteins	119
<i>Amy D. Bradshaw and E. Helene Sage</i>	
Introduction	119
Matricellular Proteins.....	119
Conclusions	124
References	125
12. Growth Factors	129
<i>Thomas F. Deuel and Nan Zhang</i>	
Introduction	129
Wound Healing	130
Role of Basic Fibroblast Growth Factor and Angiogenesis	136
Other Roles of Growth Factors and Cytokines	137
Conclusions	137
References	137
13. Tissue Engineering Bioreactors	143
<i>Lisa E. Freed and Gordana Vunjak-Novakovic</i>	
Introduction	143
Cell-Polymer Constructs	143
Bioreactor Technologies	144
Bioreactor Modulation of Tissue Formation.....	147
Bioreactor Cultivation of Functional Tissues	151
Tissue Engineering Bioreactors: State of the Art	152
Summary and Research Needs	154
References	154
14. Tissue Assembly in Microgravity.....	157
<i>Brian R. Unsworth and Peter I. Lelkes</i>	
Introduction	157
Microgravity as a Novel Tissue Culture Venue.....	158
Vascularization: Overcoming Size Limitations of Tissue Assemblies.....	159
From Single Cells to Tissues in Space	159
<i>In Vitro</i> Embryology	160
Gravitational Sensing	161
Caveats	161
Conclusions	162
References	162

Part III: <i>In Vivo</i> Synthesis of Tissues and Organs	165
15. <i>In Vivo</i> Synthesis of Tissues and Organs	167
<i>Ioannis V. Yannas</i>	
Scale of Functional Deficit: Macromolecule versus Organ.....	167
Basic Parameters of the Living Environment during <i>in Vivo</i>	
Organ Synthesis	168
Fundamental Design Principles for Tissue and Organ	
Regeneration Templates	170
Examples of <i>in Vivo</i> Organ Synthesis	174
Summary	177
References	177
Part IV. Models for Tissue Engineering.....	179
16. Organotypic and Histiotypic Models of Engineered Tissues	181
<i>Eugene Bell</i>	
Introduction	181
The Collagen Gel Model	181
Models of Cell Interactions in Collagen Lattices	182
Other Types of Epithelial–Mesenchymal Models.....	184
Vascular Models	186
Selection of Scaffolds Other Than Gels for Model Systems	188
Cell Signaling and the Enrichment of Scaffolds.....	189
Goals and Uses of Model Tissue and Organ Building.....	190
References	191
17. Quantitative Aspects of Tissue Engineering: Basic Issues	
in Kinetics, Transport, and Mechanics	195
<i>Alan J. Grodzinsky, Roger D. Kamm,</i>	
<i>and Douglas A. Lauffenburger</i>	
Introduction	195
Molecular Interactions with Cells.....	196
Molecular and Cell Transport through Tissue.....	198
Cell and Tissue Mechanics	201
References	205
Part V. Biomaterials in Tissue Engineering	207
18. Patterning of Cells and Their Environment	209
<i>Shuichi Takayama, Robert G. Chapman, Ravi S. Kane,</i>	
<i>and George M. Whitesides</i>	
Introduction	209
Soft Lithography.....	209
Self-Assembled Monolayers.....	210
Microcontact Printing.....	212
Microfluidic Patterning.....	214
Laminar Flow Patterning.....	216
Conclusion and Future Prospects	217
References	218
19. Cell Interactions with Polymers	221
<i>W. Mark Saltzman</i>	
Introduction	221
Methods for Characterizing Cell Interactions with Polymers.....	221

Cell Interaction with Polymer Surfaces.....	224
Cell Interactions with Polymers in Suspension	229
Cell Interactions with Three-Dimensional Polymer Scaffolds and Gels.....	230
References	231
20. Matrix Effects	237
<i>Jeffrey A. Hubbell</i>	
Introduction	237
Extracellular Matrix Proteins and Their Receptors	237
Model Systems for Study of Matrix Interactions.....	242
Cell Pattern Formation by Substrate Patterning	244
Signal Transduction and Functional Regulation via the Extracellular Matrix	244
Translation to Working Biomaterial Systems	246
References	246
21. Polymer Scaffold Processing.....	251
<i>Robert C. Thomson, Albert K. Shung, Michael J. Yaszemski, and Antonios G. Mikos</i>	
Introduction	251
Fiber Bonding.....	252
Solvent Casting and Particulate Leaching.....	253
Membrane Lamination	255
Melt Molding	256
Extrusion	256
Three-Dimensional Printing	257
Gas Foaming.....	257
Freeze Drying	258
Phase Separation	258
Polymer/Ceramic Composite Foams	259
<i>In Situ</i> Polymerization.....	260
Conclusions	261
References.....	261
22. Biodegradable Polymers	263
<i>James M. Pachence and Joachim Kohn</i>	
Introduction	263
Biodegradable Polymer Selection Criteria.....	263
Biologically Derived Bioresorbables.....	264
Experimental Biologically Derived Bioresorbables.....	266
Creating Materials for Tissue-Engineered Products	273
Conclusion	274
References.....	274
Part VI. Transplantation of Engineered Cells and Tissues	279
23. Approaches to Transplanting Engineered Cells and Tissues	281
<i>Janet Hardin-Young, Jeffrey Teumer, Robert N. Ross, and Nancy L. Parenteau</i>	
Introduction	281
Developing Workable Strategies	281
Mode of Action—An Important Design Consideration	283
Role of the Host.....	284

Source of Cells	285
The Immunology of Nonautologous Cells	287
Safety Considerations.....	288
Conclusion	288
References	289
24. Cryopreservation.....	293
<i>Jens O. M. Karlsson and Mehmet Toner</i>	
Introduction	293
Applications of Cryopreservation Technology	
in Tissue Engineering.....	293
Challenges in Cryopreservation Protocol Development.....	294
Cryobiology of Cells	295
Cryobiology of Tissue	302
Summary and Future Directions	304
References	305
25. Immunomodulation.....	309
<i>Denise Faustman</i>	
Introduction	309
Origin of the Designer Tissue Concept	310
Expansion of Research on Designer Tissues.....	311
Mechanisms of Graft Survival after Class I Donor Ablation	
or Antibody Masking.....	314
The Launching of Xenogeneic Human Clinical Trials in	
the United States Using Immunomodulation.....	316
Gene Addition	317
RNA Ablation.....	317
Comment	318
References	318
26. Immunoisolation	321
<i>Beth A. Zielinski and Michael J. Lysaght</i>	
Introduction	321
Technology	321
Clinical	323
Future Directions.....	326
References	328
27. Engineering Challenges in Immunoisolation	
Device Development.....	331
<i>Efstathios S. Avgoustiniatos, Haiyan Wu, and Clark K. Colton</i>	
Introduction	331
Engineering Challenges.....	331
Oxygen-Supply Limitations	336
Theoretical Analysis of <i>in Situ</i> Oxygen Generation	339
Calculations	345
Concluding Remarks	348
References.....	348
Part VII. Fetal Tissue Engineering	351
28. Fetal Tissue Engineering.....	353
<i>Dario O. Fauza</i>	
Introduction	353

General Characteristics of Fetal Cells	354
The Fetus as a Transplantation Host	355
Fetal Tissue Engineering	357
Ethical Considerations	360
Future Perspectives.....	363
References.....	364
29. Pluripotent Stem Cells.....	369
<i>Michael J. Shamblott, Brian E. Edwards, and John D. Gearhart</i>	
Introduction	369
Differentiation <i>in Vitro</i>	371
Examples of <i>in Vitro</i> Differentiation and Markers	374
<i>In Vivo</i> Applications.....	376
Summary and Future Prospects.....	378
References.....	378
Part VIII. Gene Therapy.....	383
30. Gene-Based Therapeutics	385
<i>Lee G. Fradkin, J. Dezz Ropp, and John F. Warner</i>	
Introduction	385
Gene Delivery.....	386
Persistent Gene Expression.....	390
Safety Considerations for Gene-Based Therapeutics	394
Large-Scale Production Issues.....	396
Conclusion	397
References.....	397
Part IX. Breast	407
31. Breast Reconstruction	409
<i>Kuen Yong Lee, Craig R. Halberstadt, Walter D. Holder,</i> <i>and David J. Mooney</i>	
Introduction	409
Cell Types for Soft Tissue Engineering	410
Materials.....	412
Animal Models	417
Strategies to Enhance the Vascularization of Engineered Tissue....	419
Concluding Remarks	420
References.....	420
Part X. Cardiovascular System	425
32. Blood Vessels.....	427
<i>Lian Xue and Howard P. Greisler</i>	
Introduction	427
Graft Healing.....	428
Strategies for the Development of Vascular Grafts	432
References.....	441
33. Small-Diameter Vascular Grafts	447
<i>Susan J. Sullivan and Kelvin G. M. Brockbank</i>	
Introduction	447
Synthetic Grafts	448
<i>In Vitro</i> Blood Vessel Tissue Engineering.....	448

<i>In Vivo</i> Tissue Engineering of Blood Vessels	449
Summary	453
References	453
34. Cardiac Prostheses	455
<i>Jack W. Love</i>	
Introduction	455
A Short History of Tissue Heart Valves	456
The Status of Tissue Valves in 1999	459
The Issue of Whether to Use a Stent	461
The Issue of Repair versus Replacement	463
Speculation about the Future	463
Recent Developments	464
The Ideal Valve Repair or Replacement	465
References	466
Part XI. Cornea.....	469
35. Cornea	471
<i>Vickery Trinkaus-Randall</i>	
Introduction	471
Biology of the Cornea	473
Criteria for Keratoprotheses	477
Development of the Keratoprosthesis.....	478
Evaluation of Intact Devices.....	484
Other Devices Used to Change the Curvature of the Cornea	489
References	489
Part XII. Endocrinology and Metabolism	493
36. Bioartificial Pancreas.....	495
<i>Taylor G. Wang and Robert P. Lanza</i>	
Introduction	495
Theoretical Background.....	497
Experiment	500
Capsule Development.....	501
Discussion	504
References	505
37. Parathyroid	509
<i>C. Hasse, A. Zielke, T. Bohrer, U. Zimmermann, and M. Rothmund</i>	
History of Parathyroid Allotransplantation	509
Hypoparathyroidism	511
Microencapsulation.....	517
Alginates	517
Experimental and Clinical Transplantation of Microencapsulated Parathyroid Tissue.....	518
Alternative Approaches and Perspectives	518
References	519
Part XIII. Gastrointestinal System	523
38. Alimentary Tract.....	525
<i>Gregory M. Organ and Joseph P. Vacanti</i>	
Introduction	525

Enterocyte Isolation	528
Procedural Steps.....	530
Discussion	532
References.....	537
39. Liver	541
<i>Hugo O. Jauregui</i>	
Introduction	541
Anatomy and Function of the Liver	541
Liver Failure: Pathophysiological Classification	544
Mechanisms of HE in Liver Failure.....	545
Medical Need for Liver-Assist Devices	545
Biological Component of Liver-Assist Devices	546
Liver-Assist Device Configurations	548
References.....	550
40. HepatAssist Liver Support System	553
<i>Claudy Mullon and Barry A. Solomon</i>	
Introduction	553
HepatAssist System.....	553
Cell Preparation.....	553
Clinical Study.....	554
Conclusion	557
References.....	557
41. Lineage Biology and Liver.....	559
<i>Arron S. L. Xu, Thomas L. Luntz, Jeffrey M. Macdonald,</i>	
<i>Hiroshi Kubota, Edward Hsu, Robert E. London,</i>	
<i>and Lola M. Reid</i>	
Introduction	559
Liver Organization and Development.....	560
Identification, Isolation, and Sourcing of Cells	
for Tissue Engineering	562
Sourcing of Human Cells for Tissue Engineering.....	569
Microenvironment.....	570
Biodegradable Polymers	576
Designing Bioreactors for Tissue Engineering	583
Technical Aspects of Tissue Engineering.....	585
Future Considerations.....	587
Summary	588
References.....	589
Part XIV. Hematopoietic System.....	599
42. Red Blood Cell Substitutes	601
<i>Thomas Ming Swi Chang</i>	
Introduction	601
Why Do We Have to Modify Hemoglobin?.....	601
Sources of Hemoglobin.....	605
Circulating Time of Modified Hemoglobin	606
Safety of Modified Hemoglobin Blood Substitute	606
Efficacy of Modified Hemoglobin Blood Substitute	607
Present Status and Future Research and Development	607
References.....	608

43. Lymphoid Cells.....	611
<i>Una Chen</i>	
Introduction	611
Lymphocyte Engineering: Reality and Potential	612
Concluding Remarks and Prospects for Lymphocyte Engineering	625
References	626
44. Hematopoietic Stem Cells.....	631
<i>Anne Kessinger and Graham Sharp</i>	
Introduction	631
Overview of Hematopoiesis: Properties and Regulation of Hematopoietic Stem Cells Relevant to Tissue Engineering	632
Organization of the Stem Cell Compartment	633
Stromal Microenvironments	633
References	638
Part XV. Kidney and Genitourinary System	643
45. Renal Replacement Devices	645
<i>H. David Humes</i>	
Introduction	645
Basics of Kidney Function.....	645
Tissue Engineering Approach to Renal Function Replacement.....	646
Summary	652
References	652
46. Genitourinary System	655
<i>Byung-Soo Kim, David J. Mooney, and Anthony Atala</i>	
Introduction	655
Tissue Engineering Strategies in the Genitourinary System	655
Engineering Genitourinary Tissues	656
Future Directions.....	664
References	664
Part XVI. Musculoskeletal System.....	669
47. Structural Tissue Engineering	671
<i>Charles A. Vacanti, Lawrence J. Bonassar, and Joseph P. Vacanti</i>	
Introduction	671
Materials Development	672
Structural Tissues	674
Biomechanics.....	679
Conclusion	680
References	680
48. Bone Regeneration through Cellular Engineering	683
<i>Scott P. Bruder and Arnold I. Caplan</i>	
Introduction	683
Marrow: The Source of Mesenchymal Progenitor Cells	683
Delivery of Osteoprogenitor Cells.....	687
Bone Regeneration by MSCs	689
MSCs and Gene Therapy.....	692
Prevention of Age-Related Bone Loss	693

Conclusion	694
References	694
49. Articular Cartilage Injury.....	697
<i>John M. McPherson and Ross Tubo</i>	
Introduction	697
Autologous Chondrocyte Transplantation	699
Commercialization of Autologous Chondrocyte Implantation	701
Alternative Strategies for the Delivery of Cell-Based Therapies for Cartilage Repair.....	706
Conclusions	707
References	708
50. Tendons and Ligaments	711
<i>Francine Goulet, Denis Rancourt, Réjean Cloutier, Lucie Germain, A. Robin Poole, and François A. Auger</i>	
Introduction	711
The Need for Bioengineered Tendon and Ligament Substitutes	711
Histologic Description of Tendons and Ligaments	712
Production of Bioengineered Tendons and Ligaments	713
A New Living Bioengineered Ligament Model.....	713
Technical Steps to Produce and Analyze Our bACL.....	715
Conclusions	718
Perspectives in Tendon and Ligament Bioengineering	719
References	720
51. Mechanosensory Mechanisms in Bone.....	723
<i>Stephen C. Cowin and Melvin L. Moss</i>	
Introduction	723
The Connected Cellular Network.....	724
Mechanosensation on the CCN	725
Questions for Future Research; Socratic Questions	731
References	732
52. Myoblast Therapy.....	739
<i>Joanne C. Cousins, Jennifer E. Morgan, and Terence A. Partridge</i>	
Introduction	739
Myoblast-Mediated Gene Transfer	739
Therapeutic Myoblast Transplantation for Myopathies	740
References	745
Part XVII. Nervous System	749
53. Protection and Repair of Hearing	751
<i>Richard A. Altschuler, Yehoash Raphael, Jochen Schacht, David J. Anderson, and Josef M. Miller</i>	
Introduction	751
Basis for Interventions.....	751
Methods of Intervention	755
Conclusions	757
References	757
54. Vision Enhancement Systems.....	761
<i>Gislin Dagnelie, Mark S. Humayun, and Robert W. Massof</i>	
Visual System: Architecture and (Dys)Function	761

Possible Approaches to Vision Restoration	763
Current Approaches	763
Applications of Engineered Cells and Tissues: Challenges and Tentative Solutions	768
Toward "2020" Vision	770
References	770
55. Brain Implants	773
<i>Lars U. Wahlberg</i>	
Introduction	773
Naked Cell Implants	773
Encapsulated Cell Implants	777
Controlled-Release Implants	777
Axonal Guidance Implants	778
Disease Targets	778
Surgical Considerations	780
Conclusions	780
References	780
56. Nerve Regeneration	785
<i>Eric G. Fine, Robert F. Valentini, and Patrick Aebischer</i>	
Nerve Regeneration and Neural Tissue Engineering	785
Overview of Neural Regeneration	786
Experimental Use of Guidance Channels	788
Biomaterial-Based Approaches to Nerve Repair	790
Tissue Engineering Approaches to Nerve Repair	794
Specificity of Nerve Reconnections	796
Summary	796
References	796
57. Transplantation Strategies for Treatment of Spinal Cord Dysfunction and Injury	799
<i>Jacqueline Sagen, Mary Bartlett Bunge, and Naomi Kleitman</i>	
Introduction	799
Spinal Implants as Axon Bridges	799
Spinal Implants for Replacement of Specific Cell Populations	805
Spinal Implants for Provision of Neurotransmitters	808
References	813
58. Neural Stem Cells	821
<i>Martin P. Vacanti</i>	
Introduction	821
Background	821
Neural Stem Cell Applications in Tissue Engineering	824
Summary	828
References	828
Part XVIII. Periodontal and Dental Applications	831
59. Periodontal Applications	833
<i>Neal A. Miller, Marie C. Béné, Jacques Penaud, Pascal Ambrosini, and Gilbert C. Faure</i>	
Introduction	833
Guided Tissue Regeneration	834

Bone Substitutes	836
Dental Implants	838
Growth Factors and Plasma Proteins	839
Cell Culture Techniques	843
Conclusion	843
References	843
60. Regeneration of Dentin	847
<i>R. Bruce Rutherford</i>	
Introduction	847
Dentin	847
Bone Morphogenetic Proteins	847
Induction Potential of Dentin	848
Recombinant Human BMPs Induce Dentin Formation	848
Delivery Systems	850
Clinical Considerations	850
Additional Considerations	851
Potential Applications of BMP-Induced Dentinogenesis	851
References	852
Part XIX. Skin	855
61. Wound Repair: Basic Biology to Tissue Engineering	857
<i>Richard A. F. Clark and Adam J. Singer</i>	
Introduction	857
Inflammation	858
Epithelialization	858
Granulation Tissue	862
Wound Contraction and Extracellular Matrix	
Reorganization	868
References	870
62. Skin	879
<i>Nancy L. Parenteau, Janet Hardin-Young, and Robert N. Ross</i>	
Introduction	879
Skin Structure and Function	880
Engineering Skin Tissue	883
Epidermal Regeneration	884
Dermal Replacement	884
Composite Skin Grafts	885
Conclusion	887
References	887
63. Dermal Equivalents	891
<i>Gail K. Naughton</i>	
Introduction	891
Cell Testing and Establishment of Manufacturing	
Cell Banks	891
Manufacturing a Dermal Replacement	891
Clinical Results of Wound Healing	900
Summary	901
References	901

Part XX. Womb	903
64. Artificial Womb	905
<i>Christopher S. Muratore and Jay M. Wilson</i>	
What Does the Field of Tissue Engineering Have to Offer the Premature Infant?.....	906
Prematurity—The Consequences.....	906
The Ideal Artificial Womb	907
State-of-the-Art Artificial Placenta Design	909
Organ Maturation during Maintenance with Artificial Womb	911
Variations of Artificial Womb Technology.....	911
Conclusion	912
References	912
Part XXI. Regulatory Issues	913
65. Regulatory Considerations.....	915
<i>Kiki B. Hellman, Ruth R. Solomon, Claudia Gaffey,</i>	
<i>Charles N. Durfor, and John G. Bishop</i>	
Introduction	915
Legislative Authority/Oversight.....	916
Product Evaluation and the Regulatory Process.....	917
Recent Developments in Product Evaluation	922
Interaction between FDA Headquarters and Field Offices	925
Development of Standards	925
Communications with Industry	926
The FDA and Future Perspectives for Tissue-Engineered Medical Products	927
References	927
Epilogue.....	929
Index.....	931
