<b>1</b>	<b>Chemiosmotic energy transduction</b>	<b>1</b>
1.1	What is "energy transduction"?	1
1.2	The chemiosmotic hypothesis	3
1.3	Energy-transducing organelles	5
1.4	Background to the chemiosmotic hypothesis	12
<b>2</b>	<b>Ion transport across energy-transducing membranes</b>	<b>25</b>
2.1	Introduction	25
2.2	The structure of energy-transducing membranes	25
2.3	Pathways of ion transport	26
2.4	The natural permeability properties of bilayer regions	29
2.5	Ionophore-induced permeability properties of bilayer regions	30
2.6	Protein-catalysed transport	35
2.7	Bulk solute movements across energy-transducing membranes	36
<b>3</b>	<b>Quantitative bioenergetics: the measurement of driving forces</b>	<b>41</b>
3.1	Introduction	41
3.2	Gibbs energy	44
3.3	Oxido-reduction (redox) potentials	49
3.4	Ion electrochemical potential differences	53
3.5	Equilibrium distributions of ions, weak acids and weak bases	56
3.6	Membrane potentials, diffusion potentials, Donnan potentials and surface potentials	58
3.7	Photons	59
3.8	Bioenergetic interconversions	60
3.9	The application of irreversible thermodynamics	62
<b>4</b>	<b>The chemiosmotic proton circuit</b>	<b>65</b>
4.1	Introduction	65
4.2	The measurement of proton electrochemical potential	68
4.3	The stoichiometry of proton extrusion by the respiratory chain	78
4.4	The stoichiometry of proton uptake by the ATP synthetase	82
4.5	Proton current, proton conductance and respiratory control	84
4.6	Non-chemiosmotic parameters of energy-transduction	91
4.7	Reversed electron transfer and the proton circuit driven by ATP hydrolysis	93
4.8	ATP synthesis driven by an artificial proton electrochemical potential	95

<b>5</b>	<b>Respiratory chains</b>	<b>99</b>
5.1	Introduction	99
5.2	Components of the mitochondrial respiratory chain and methods of detection	99
5.3	The linear sequence of redox carriers in the respiratory chain	108
5.4	Proton translocation by the respiratory chain; structural predictions made by "loop" or "conformational pump" models	114
5.5	Fractionation and reconstitution of respiratory chain complexes	115
5.6	Complex I (NADH-UQ oxidoreductase)	117
5.7	Complex II (succinate dehydrogenase); electron-transferring flavoprotein and $\alpha$ -glycerophosphate dehydrogenase	118
5.8	Ubiquinone and complex III ( $bc_1$ -complex or UQ-cyt <i>c</i> oxidoreductase)	119
5.9	Cytochrome <i>c</i> and complex IV (cytochrome <i>c</i> oxidase; ferrocytochrome <i>c</i> -O <sub>2</sub> oxidoreductase)	122
5.10	The nicotinamide nucleotide transhydrogenase	124
5.11	The respiratory chain of plant mitochondria	126
5.12	Bacterial respiratory chains	127
<b>6</b>	<b>Photosynthetic generators of proton electrochemical potential</b>	<b>133</b>
6.1	Introduction	133
6.2	The light reaction of purple bacteria	135
6.3	The generation of $\Delta\mu_{H^+}$ in purple bacteria	138
6.4	The electron-transfer pathway in chloroplasts	142
6.5	The proton circuit in chloroplasts	146
6.6	Bacteriorhodopsin and the purple membrane of halobacteria	147
<b>7</b>	<b>The ATP synthetase</b>	<b>151</b>
7.1	Introduction	151
7.2	The structure of the ATP synthetase	151
7.3	The function of $F_0$	154
7.4	The mechanism of ATP synthesis by $F_1$	155
7.5	The transport of adenine nucleotides and $P_i$ in mitochondria	159
<b>8</b>	<b>The interaction of bioenergetic organelles with their environment</b>	<b>167</b>
8.1	Introduction	167
8.2	Methods of studying metabolic transport	167
8.3	Mitochondrial metabolite carriers	169
8.4	Mitochondrial calcium transport	172
8.5	Bacterial transport	175
