

Contents

<i>Introduction</i>	1
 CHAPTER 1. <i>Life: Knowledge and the Loss of Innocence</i>	11
Life	11
The Cell Universe	15
Genes and Their Function	24
Enzymes	33
Energy	34
Revising the Genetic Blueprint	37
Gene Splicing Is Not Enough	45
Bozo the Clone	46
Of Frogs, Mice, and Men	48
Exploring the Immune System	51
The Search for the Fountain of Youth	55
Genetics and Behavior	59
Genes and Human Disease	62
Cancer	65
 CHAPTER 2. <i>Life: The Technology</i>	69
Science and Technology	69
What Good Is It Anyway?	72
Medicine	74
Vaccines	78
Diagnosis of Disease	79
Human Gene Therapy	80
Agriculture	83
The Environment	86
Better Living through Biochemistry	89
Bioelectronics	92

Biological Warfare	93
The Brave New World	94
The Corporation Biologist	95
Investing in the Future: The View from Wall Street	104
Patents and Trade Secrets	110
The Search for the Truth and the Profit Motive: Can They Coexist?	119
Biotechnology around the World	128
 CHAPTER 3. <i>The Fear and Trembling</i>	141
Is Gene Splicing Hazardous to Your Health	141
The Controversy	150
Fear	160
The U.S. Congress Meets Recombinant DNA	169
 CHAPTER 4. <i>Encounter with Tomorrow</i>	179
Foretelling the Future	179
The Future and Determinism	185
Improving Human Life	188
Forbidden Knowledge	199
Toward an Ethic for Technology	214
Who Decides?	222
Limits	229
Where Do We Go from Here?	238
 <i>Epilogue</i>	247
 <i>Appendix: A Concise History and Current Status of Molecular Biology—Or the Truth about Gene Splicing</i>	249
The First Recombinant DNA	249
The Discovery of Restriction Enzymes— An Exercise in Serendipity	250
Plasmids and Recombinant DNA	257
Isolating Genes	262

Split Genes, Tandem Genes, and Pseudogenes	267
Animal Cloning	270
Building a Better Mouse	272
Adding New Genes to Mammalian Cells	273
The Immune System	274
Hybridomas and Monoclonal Antibodies	275
The Control of Genetic Expression—Prokaryotes	276
The Control of Genetic Expression—Eukaryotes	277
 <i>Notes and References</i>	281
 <i>Index</i>	299
