Preface	ix
1 DNA tumour viruses <i>B. E. Griffin</i>	1
Introduction. Histories of polyoma virus and SV40. Physical description of polyoma virus and SV40 and their DNAs. DNA replication. Transcription in permissive cells. Proteins of polyoma virus and SV40. Genetics. Transformation. Comparison of polyoma virus and SV40. Conclusions.	
2 RNA tumour viruses <i>R. A. Weiss</i>	27
Introduction. Assay methods for oncornaviruses. Structure and replication. Transmission of oncornaviruses. Genetics of oncornaviruses. Oncogenesis. Human RNA tumour viruses.	
3 Control of DNA synthesis and cell division in bacteria <i>R. James</i>	59
A system for studying differentiation. The <i>E. coli</i> cell-division cycle. Regulation of DNA initiation. Regulation of cell septation. Reflection.	
4 The biology of plasmids <i>P. A. Williams</i>	77
Introduction. Characterisation of a function as plasmid-coded. Classes of plasmid. Some important features of plasmid biology. Concluding remarks.	
5 Bacteriocins <i>K. G. Hardy</i>	109
Introduction. Classification and chemistry of colicins. Colicin synthesis. Col plasmids. Effects of colicins on sensitive bacteria. Ecology of colicins. Other bacteriocins: the problem of defining a bacteriocin. Uses of bacteriocins. Summary.	
6 Molecular basis of toxin action <i>J. P. Arbuthnott</i>	127
Scope of chapter. Toxins and pathogenicity. Diversity and special features of toxins. Approaches to the study of mechanism of action. Diphtheria	

toxin. The enterotoxins. The neurotoxins. The cytolytic (membrane-damaging) toxins. Staphylococcal epidermolytic toxin. Lipopolysaccharide endotoxin.	
7 Efficiency of microbial growth <i>D. E. F. Harrison</i>	155
Introduction. Expression and measurement of growth efficiency. Maintenance energy and 'true yield'. Factors affecting growth efficiency. The regulation of growth efficiency. The importance of growth efficiency.	
8 Interactions between microbial populations <i>J. H. Slater and A. T. Bull</i>	181
Introduction. Basic types of interaction. The kinetics of competition. Competition as a mechanism in enzyme evolution. Microbial communities. Conclusions.	
9 Microbial hormones <i>G. W. Gooday</i>	207
Introduction. Autotactic attractants. Sperm attractants. Fungal, algal and protozoal sex hormones. Conclusions.	
10 Morphogenesis in bacteria <i>R. Whittenbury and C. S. Dow</i>	221
Introduction. The aquatic environment and the morphology of microbes. The colonial microbes. Categorisation of cell cycles and related events. 'Budding' bacteria. Varieties of budding bacteria. <i>Escherichia coli</i> —molecular biology of the cell cycle. <i>Arthrobacter crystallopoietes</i> —nutritionally-controlled morphogenesis. <i>Bacillus</i> species—endospore morphogenesis and differentiation; non-obligate differentiation. <i>Caulobacter</i> species—obligate dimorphism. <i>Rhodomicrombium vannielii</i> —summation of microbial diversity. Filamentous cyanobacteria—(multicelled prokaryotes?). Myxobacteria.	
11 Membrane fluidity in microorganisms <i>D. J. Ellar</i>	265
Introduction. Membrane isolation and analysis. Membranes as an asymmetric fluid mosaic. Membrane variability and the role of fluidity. Membrane biosynthesis and the fluid mosaic model.	
12 Transport of organic solutes by bacteria <i>H. Tristram</i>	297
Introduction. Transport of β -galactosides in <i>Escherichia coli</i> . Group translocation. Isolation and characterisation of transport proteins. Transport of amino acids and peptides. Transport of galactose in <i>Escherichia coli</i> . Transport of hexose phosphates. The problem of energy-coupling to transport. Concluding remarks.	
13 Bacterial motility and chemotaxis <i>D. G. Smith</i>	321
Introduction. Flagellar movement. Spirochaetal movement. Gliding movement. Bacterial chemotaxis. Chemotaxis in non-flagellate bacteria. Summary and prospects.	

14	Biological nitrogen fixation <i>J. R. Postgate</i>	343
	Introduction. Biochemistry. Physiology. Ecology. Genetics. Some future prospects.	
15	Bioenergetics of chemolithotrophic bacteria <i>D. P. Kelly</i>	363
	Introduction. The organisms and their substrates. Energy requirements for autotrophic growth and the nature of chemolithotrophic energy generation. The energetic problems facing the chemolithotrophs. Pathways of oxidations in chemolithotrophs. Continuous flow culture as a tool in elucidating chemolithotrophic energy-coupling mechanisms. Concluding remarks.	
16	Photosynthetic endosymbionts of invertebrates <i>D. C. Smith</i>	387
	Introduction. Symbiotic dinoflagellates. Symbiotic <i>Chlorella</i> . <i>Convoluta roscoffensis</i> . Chloroplast symbiosis. Cyanellae. Discussion.	
17	Current problems and developments in medical mycology <i>D. Kerridge</i>	415
	Introduction. Detection. The role of exocellular products in fungal infections. Structural dimorphism. Chemotherapy of fungal infections. Prospects.	
18	Epidemiology and control of protozoal pathogens of man <i>J. R. Baker</i>	431
	Introduction. Classification. Parasites acquired orally. Parasites acquired via the blood. Parasites acquired congenitally. Parasite acquired venereally— <i>Trichomonas vaginalis</i> . Conclusions.	
19	Microbial control of pest insects <i>J. R. Norris</i>	459
	Introduction. History. <i>Bacillus thuringiensis</i> . <i>Bacillus popilliae/Bacillus lentinorbus</i> . Viruses. Safety of microbial insecticides. The development of resistance to microbial control agents. Future prospects.
