LIST OF CONTRIBUTORS	xiii
FOREWORD	xix
Mark Chase	
PREFACE	xxi
Angela Karp, Peter G. Isaac and David S. Ingram	
INTRODUCTION	xxiii
Etienne Magnien EU DGXII	
PART ONE DNA EXTRACTION	1
1 DNA Extraction: widely applicable methods	3
1.1 Isolation of animal cellular total DNA	5
<i>De-Xing Zhang and Godfrey M. Hewitt</i>	
1.2 Plant total DNA extraction	10
<i>Julia Rueda, Rosario Linacero and Ana M. Vázquez</i>	
1.3 Chloroplast DNA extraction procedure for species high in phenolics and polysaccharides	15
<i>Roselyne Lumaret, Henri Michaud, Jean-Philippe Ripoll and Lamjed Toumi</i>	
1.4 Quantification of DNA	18
<i>Rosario Linacero, Julia Rueda and Ana M. Vázquez</i>	
Box 1.1 Miniprep procedures for the isolation of plant DNA	22
<i>Keith J. Edwards</i>	
2 DNA Extraction: methods for difficult species/tissues	25
2.1 Special DNA extraction methods for some animal species	27
<i>De-Xing Zhang and Godfrey M. Hewitt</i>	
A: Extraction of total DNA from soft-body invertebrate species (e.g. aphids, woodlice)	27
B: Extraction of total DNA from tissues or organisms with high nuclease activity	29
2.2 Methods for difficult plant species/tissues	32
<i>Birgit Ziegenhagen and Florian Scholz</i>	
Box 2.1 DNA maxipreparations: A comparison of protocols for rapid extraction of good quality DNA from recalcitrant species	36
<i>Birgit Ziegenhagen and Florian Scholz</i>	

3 Preserved specimens	39
3.1 Isolation of DNA from preserved specimens <i>De-Xing Zhang and Godfrey M. Hewitt</i>	41
A: Chelex DNA extraction method for PCR-based analysis	42
B: Extraction of DNA from paraffin-embedded tissues for PCR analysis	44
Box 3.1 Field collection: animals <i>De-Xing Zhang and Godfrey M. Hewitt</i>	46
Box 3.2 Field collection: plants <i>Roger Hyam</i>	49
4 DNA Extraction using anion-exchange chromatography and silica-gel based membranes	51
4.1 Isolation of nucleic acids using anion-exchange chromatography : qiagen-tip based methods <i>Simone Gauch, Ralf Hermann, Petra Feuser, Uwe Oelmüller and Helge Bastian</i>	54
4.2 Isolation of nucleic acids using silica-gel based membranes: methods based on the use of QIAamp spin columns <i>Simone Gauch, Ralf Hermann, Petra Feuser, Uwe Oelmüller and Helge Bastian</i>	59
A: DNA isolation from animal tissues using QIAamp spin columns	60
B: Isolation from plant tissue with DNeasy spin columns	61
Box 4.1 Isolation of total RNA from animal tissue using anion-exchange chromatography (qiagen-tips) <i>Simone Gauch, Ralf Hermann, Petra Feuser, Uwe Oelmüller and Helge Bastian</i>	64
Box 4.2 Isolation of total RNA using silica-gel based membranes <i>Simone Gauch, Ralf Hermann, Petra Feuser, Uwe Oelmüller and Helge Bastian</i>	67
PART TWO BASIC SCREENING METHODS	71
5 Isozymes <i>Gerhard Müller-Starck</i>	73
6 RFLP analysis <i>Reinhold Brettschneider</i>	83
Box 6.1 Nonradioactive probes <i>Peter G. Isaac</i>	96
7 DNA fingerprinting with VNTR sequences <i>Michael W. Bruford and Ilik J. Saccheri</i>	99

8	Polymerase chain reaction	109
8.1	Polymerase chain reaction <i>Rita Aert, Marleen Voet, Steven Van Campenhout, Jacqueline Vander Stappen and Guido Volckaert</i>	111
8.2	PCR sequencing <i>Guido Volckaert, Rita Aert, Marleen Voet, Steven Van Campenhout and Peter Verhasselt</i>	119
Box 8.1	Routes to DNA sequencing <i>Guido Volckaert</i>	125
8.3	Polymerase chain reaction-restriction fragment length polymorphism (PCR-RFLPs) <i>Keith J. Edwards</i>	131
8.4	TGGE and DGGE <i>Michael Etscheid and Detlev Riesner</i>	135
	A: Temperature gradient gel electrophoresis	138
	B: Denaturing gradient gel electrophoresis	141
Box 8.2	Theoretical aspects of thermal denaturation of nucleic acids <i>Michael Etscheid and Detlev Riesner</i>	144
Box 8.3	Modifications for the improvement of TGGE and DGGE <i>Michael Etscheid and Detlev Riesner</i>	147
Box 8.4	Temporal TGGE <i>Michael Etscheid and Detlev Riesner</i>	149
Box 8.5	TGGE and SSCP <i>Michael Etscheid and Detlev Riesner</i>	150
8.5	Single-strand conformation polymorphism (SSCP) analysis <i>William.C. Jordan, Katherine Foley and Michael Bruford</i>	152
8.6	A rapid screening procedure for detecting mtDNA haplotypes in humpback whales (<i>Megaptera novaeangliae</i>) <i>Anja H. Larsen, Pernille Feddersen and Per J. Palsbøll</i>	157
Box 8.6	Modifications to SSCP analysis conditions <i>William C. Jordan, Katherine Foley and Michael Bruford</i>	164
Box 8.7	Automation and the polymerase chain reaction <i>Richard G. Keightley</i>	165
9	RAPDs	169
9.1	Randomly amplified polymorphic DNAs (RAPDs) <i>Keith J. Edwards</i>	171

Box 9.1	Reproducibility testing of RAPDs by a network of European laboratories <i>C.J. Jones, K.J. Edwards, S. Castiglione, M.O. Winfield, F. Sala, C. Van der Wiel, B.L. Vosman, M. Matthes, A. Daly, R. Brettschneider, P. Bettini, M. Buiatti, E. Maestri, N. Marmioli, R.L. Aert, G. Volckaert, J. Rueda, A. Vazquez and A. Karp</i>	176
10 AFLP		181
10.1	Amplified fragment length polymorphism (AFLP) <i>Michaela C. Matthes, Allan Daly and Keith J. Edwards</i>	183
Box 10.1	Reproducibility testing of AFLPs by a network of European laboratories <i>C.J. Jones, K.J. Edwards, S. Castiglione, M.O. Winfield, F. Sala, C. Van der Wiel, B.L. Vosman, M. Matthes, A. Daly, R. Brettschneider, E. Maestri, N. Marmioli, R.L. Aert, G. Volckaert and A. Karp</i>	191
11 SSRs		193
11.1	Genotyping with microsatellite markers <i>Claudio Ciofi, Stephan M. Funk, Trevor Coote, David J. Cheesman, Robert L. Hammond, Ilik J. Saccheri and Michael W. Bruford</i>	195
Box 11.1	Characteristics of microsatellites <i>Michael W. Bruford, Claudio Ciofi, Stephan M. Funk</i>	202
11.2	PCR analysis of SSR polymorphisms in plants using agarose gels <i>Michele Morgante, Antonella Pfeiffer, Irena Jurman, Gianpaolo Paglia and Angelo M. Oliveiri</i>	206
Box 11.2	Fluorescent labelling of SSRs and automated detection <i>Michele Morgante, Antonella Pfeiffer, Irena Jurman, Gianpaolo Paglia and Angelo M. Oliveiri</i>	208
Box 11.3	Reproducibility testing of SSRs by a network of European laboratories <i>C.J. Jones, K.J. Edwards, C. Van der Wiel, B.L. Vosman, M. Matthes, A. Daly, P. Bettini, M. Buiatti, E. Maestri, N. Marmioli, J. Rueda, A. Vazquez and A. Karp</i>	209
PART THREE SOURCES OF PROBES AND PRIMERS		213
12 Probes		215
12.1	Cloning of random amplified polymorphic DNA (RAPD) to generate codominant genetic markers <i>Christoph Sperisen and Urs Büchler</i>	217
12.2	cpDNA <i>Kornel Burg, Silvia Fluch and Giovanni G. Vendramin</i>	223

12.3	RFLP markers <i>Ahmed Jahoor</i>	229
13	Primers	237
13.1	Nuclear DNA primers <i>Joanne Russell, Gordon Machray and Robbie Waugh</i>	239
13.2	Primers for animal mitochondrial DNA: the importance of species-specific primers <i>Per J. Pasbøll and Peter Arctander</i>	249
13.3	cpDNA and mtDNA primers in plants <i>Rémy J. Petit, Brigitte Demesure and Sylvie Dumolin</i>	256
Box 13.1	Variations on a theme <i>Ben Vosman</i>	262
14	Ribosomal DNA probes and primers <i>Christian Schlötterer</i>	265
15	Probes and primers for simple repeats	277
15.1	Isolation of microsatellite markers in animals <i>Robert L. Hammond, Ilik J. Saccheri, Claudio Ciofi, Trevor Coote, Stephan M. Funk, W. Owen McMillan, Michele K. Bayes, Emma Taylor and Michael W. Bruford</i>	279
Box 15.1	VNTR probes <i>Michael W. Bruford</i>	286
Box 15.2	Designing SSR primer pairs using MacVector Software <i>Michael W. Bruford, Claudio Ciofi, Stephan M. Funk, and Robert L. Hammond</i>	287
15.2	Isolation of microsatellite markers in plants <i>Michele Morgante, Anotella Pfeiffer, Irena Jurman, Gianpaolo Paglia and Angela M. Olivieri</i>	288
PART FOUR	DATA ANALYSIS	297
16	Measures of polymorphism within and among populations	299
16.1	Definitions <i>Antoine Kremer, Rémy J. Petit and Odile Pons</i>	301
16.2	Diversity and differentiation at the allelic level <i>Antoine Kremer, Rémy J. Petit and Odile Pons</i>	303
16.3	Diversity and differentiation at the nucleotide level <i>Antoine Kremer, Rémy J. Petit and Odile Pons</i>	306

17	Distance data	313
17.1	Measuring genetic distance <i>Mark A. Beaumont, Kamal M. Ibrahim, Pierre Boursot and Michael W. Bruford</i>	315
18	Discrete data	327
18.1	Binary data analysis <i>Michael W. Bruford and Mark A. Beaumont</i>	329
18.2	Reading DNA sequences <i>Gitte Petersen</i>	332
18.3	Multiple alignment <i>Jotun Hein</i>	334
Box 18.1	Selected software packages for personal computers <i>Ole Seberg and Gitte Petersen</i>	341
18.4	Constructing phylogenies from discrete data – parsimony methods <i>Ole Seberg and Gitte Petersen</i>	344
18.5	Constructing phylogenies from discrete data – maximum likelihood <i>Ole Seberg and Gitte Petersen</i>	353
19	Molecules vs morphology <i>Gitte Petersen and Ole Seberg</i>	357
Box 19.1	Gene trees vs species trees <i>Gitte Petersen and Ole Seberg</i>	365
PART FIVE	CASE STUDIES	367
20	Accessions and collections	369
20.1	Comparison of molecular marker assays in inbreeding (barley) and outbreeding (potato) species <i>Dan Milbourne, Joanne Russell and Robbie Waugh</i>	371
20.2	The use of molecular markers for the identification of tomato cultivars <i>Ben Vosman</i>	382
20.3	Molecular analysis of variation in <i>Lactuca</i> <i>Clemens van de Wiel and Ben Vosman</i>	388
20.4	Evaluation of the AFLP and RAPD molecular marker technologies with regard to the genetic diversity of commercial wheat cultivars <i>Allan Daly</i>	394
Box 20.1	Screening germplasm collections <i>Gitte Petersen and Ole Seberg</i>	398

21 Populations	401
21.1 PCR-RFLP analysis of chloroplast DNA of various gymnosperms: a rapid tool for assessing genetic variation at the above-species level <i>Birgit Ziegenhagen and Matthias Fladung</i>	403
21.2 Analysis of hypervariable chloroplast microsatellites in <i>Pinus halepensis</i> reveals a dramatic genetic bottleneck <i>Michele Morgante, Nicoletta Felice and Giovanni G. Vendramin</i>	407
21.3 Genetic variation of mitochondrial DNA reveals subdivision of Norway spruce (<i>Picea abies</i> (L.) Karst.) <i>Christoph Sperisen, Urs Büchler and Gábor Mátyás</i>	413
21.4 Diversity in insect species using DNA sequences <i>Godfrey Hewitt</i>	418
21.5 The usefulness of parallel analysis of uni- and bi-parental markers: the North Atlantic humpback whale <i>Per J. Palsbøll, Phil J. Clapham, Hanne Jørgensen, Finn Larsen, David Mattila, Richard Sears, Johann Sigurjonsson and Oswaldo Vasquez</i>	426
21.6 Partitioning of genetic diversity in the house mouse <i>Pierre Boursot</i>	431
22 Classification and phylogeny	435
22.1 Molecular studies on the phylogeny of the genus barley (<i>Hordeum</i> ; Poaceae) <i>Gitte Petersen and Ole Seberg</i>	437
22.2 The genus <i>Rhododendron</i> : a case study to test the value of various molecular techniques as measures of biodiversity <i>David Chamberlain and Roger Hyam</i>	441
22.3 RAPD fingerprinting as a tool for taxonomic studies in the genus <i>Populus</i> <i>Francesco Sala, Gejiao Wang, Stefano Castiglione and Stefano Bisoffi</i>	449
23 Screening for 'useful variation'	457
23.1 Screening for 'useful variation' using RAPD markers <i>Robbie Waugh and Joanne Russell</i>	459
23.2 Application of stress responsive genes RFLP analysis to the evaluation of genetic diversity in plants <i>Nelson Marmioli, Aliosha Malcevski and Elena Maestri</i>	464
23.3 Exploiting genome plasticity for the detection of hypervariable sequences <i>Marcello Buiatti and Paatrizia Bogani</i>	471
Appendix Safety in the molecular laboratory <i>Peter G. Isaac and Keith J. Edwards</i>	485
Index	491
