Acknowledgements	vii
Foreword by Sir Hans Krebs	ix
Preface	xi
Conventions and abbreviations	1
1 Introduction	3
2 Kinetics and thermodynamics in biochemistry	7
1. Macromolecules	43
3 Introduction to macromolecules	45
4 Protein structure	60
5 Protein function I	91
6 Protein function II – the enzymes	109
7 Structure and function of nucleic acids	135
8 Structure and function of polysaccharides and lipids	165
2. Intermediary metabolism	205
9 Introduction to intermediary metabolism	207
10 The cell	213
11 Methods in studying metabolism	225
12 The respiratory chain: oxidative phosphorylation	233
13 The light reaction: photosynthetic phosphorylation	247
14 Glycolysis	256
15 Oxidation of pyruvate: the tricarboxylic acid cycle	270
16 Oxidation of fats	282
17 The pentose phosphate pathway	292
18 Uses of ATP: mechanical and chemi-osmotic work	300
19 Synthesis of carbohydrate	321
20 Synthesis of lipid	340
21 Intracellular compartmentation in carbohydrate and fat metabolism	350
22 Metabolism of amino acids	356
23 Synthesis of other nitrogenous compounds	387

3. Informational macromolecules	399
24 Principles of molecular genetics	401
25 Replication of DNA and synthesis of RNA	427
26 Synthesis of protein	437
27 Evolution of amino-acid sequences	460
4. Regulation	471
28 Control of protein synthesis	473
29 Control of enzyme activity	490
Appendices	509
1 Enzyme kinetics	509
2 Separation of biochemical compounds	521
Further reading	547
Index	551
