

## TABLE OF CONTENTS

### Volume I

|                                                           |     |
|-----------------------------------------------------------|-----|
| Chapter 1                                                 |     |
| Fundamental Concepts of Controlled Release .....          | 1   |
| A. F. Kydonieus                                           |     |
| Chapter 2                                                 |     |
| Monolithic Polymer Devices — Section 1 .....              | 21  |
| T. J. Roseman                                             |     |
| Monolithic Polymer Devices — Section 2 .....              | 55  |
| Nate F. Cardarelli                                        |     |
| Chapter 3                                                 |     |
| Monolithic Elastomeric Materials .....                    | 73  |
| Nate F. Cardarelli                                        |     |
| Chapter 4                                                 |     |
| Membrane Systems .....                                    | 129 |
| W. P. O'Neill                                             |     |
| Chapter 5                                                 |     |
| Multilayered Laminated Structures .....                   | 183 |
| A. F. Kydonieus and A. R. Quisumbing                      |     |
| Chapter 6                                                 |     |
| Controlled Release from Ultramicroporous Triacetate ..... | 239 |
| A. S. Obermayer                                           |     |
| Index .....                                               | 247 |

### Volume II

|                                                                                     |    |
|-------------------------------------------------------------------------------------|----|
| Chapter 1                                                                           |    |
| Erodible Matrices .....                                                             | 1  |
| S. Yolles and M. F. Sartori                                                         |    |
| Chapter 2                                                                           |    |
| The Biodegradative Controlled Release of Pesticides from Polymeric Substrates ..... | 7  |
| G. G. Allan, J. W. Beer, M. J. Cousin, and R. A. Mikels                             |    |
| Chapter 3                                                                           |    |
| Polymers Containing Pendent Pesticide Substituents .....                            | 63 |
| F. W. Harris                                                                        |    |
| Chapter 4                                                                           |    |
| Microencapsulation Using Coacervation/Phase Separation Techniques .....             | 83 |
| J. A. Bakan                                                                         |    |

|                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------|-----|
| Chapter 5                                                                                              |     |
| Pharmaceutical Applications of Microencapsulation Using Coacervation/Phase Separation Techniques ..... | 107 |
| M. Calanchi and M. Maccari                                                                             |     |
| Chapter 6                                                                                              |     |
| Microencapsulation Using Interfacial Polymerization Techniques—Agricultural Applications.....          | 117 |
| Robert C. Koestler                                                                                     |     |
| Chapter 7                                                                                              |     |
| The Wurster Process .....                                                                              | 133 |
| Harland S. Hall and Ralph E. Pondell                                                                   |     |
| Chapter 8                                                                                              |     |
| Microencapsulation Using Physical Methods.....                                                         | 155 |
| George R. Somerville and John T. Goodwin                                                               |     |
| Chapter 9                                                                                              |     |
| Controlled Vapor Release from Hollow Fibers: Theory and Applications with Insect Pheromones .....      | 165 |
| Thomas W. Brooks                                                                                       |     |
| Chapter 10                                                                                             |     |
| Delivery of Active Agents by Osmosis.....                                                              | 195 |
| Felix Theeuwes                                                                                         |     |
| Chapter 11                                                                                             |     |
| Starch and Other Polyols as Encapsulating Matrices for Pesticides.....                                 | 207 |
| B. S. Shasha                                                                                           |     |
| Chapter 12                                                                                             |     |
| Pine Kraft Lignin as a Pesticide Delivery System .....                                                 | 225 |
| H. T. DelliColli                                                                                       |     |
| Chapter 13                                                                                             |     |
| Other Controlled Release Technologies and Applications .....                                           | 235 |
| A. F. Kydonieus                                                                                        |     |
| Index .....                                                                                            | 259 |
