

# CONTENTS

PREFACE xi

NOTES ON THE SECOND EDITION xvi

## 1. INTRODUCTION 1

- 1.1 *Some definitions* 1
- 1.2 *The development of biometry* 3
- 1.3 *The statistical frame of mind* 5

## 2. DATA IN BIOLOGY 8

- 2.1 *Samples and populations* 8
- 2.2 *Variables in biology* 10
- 2.3 *Accuracy and precision of data* 13
- 2.4 *Derived variables* 16
- 2.5 *Frequency distributions* 19

## 3. THE HANDLING OF DATA 32

- 3.1 *Calculators and computers* 33
- 3.2 *Efficiency and economy in data processing* 36

## 4. DESCRIPTIVE STATISTICS 38

- 4.1 *The arithmetic mean* 39
- 4.2 *Other means* 42
- 4.3 *The median* 43
- 4.4 *The mode* 46

4.5	<i>Simple statistics of dispersion</i>	48
4.6	<i>The standard deviation</i>	49
4.7	<i>Sample statistics and parameters</i>	52
4.8	<i>Coding of data before computation</i>	54
4.9	<i>Methods for computing mean and standard deviation</i>	55
4.10	<i>The coefficient of variation</i>	58
5.	<b>INTRODUCTION TO PROBABILITY DISTRIBUTIONS: BINOMIAL AND POISSON</b>	62
5.1	<i>Probability, random sampling, and hypothesis testing</i>	64
5.2	<i>The binomial distribution</i>	70
5.3	<i>The Poisson distribution</i>	82
5.4	<i>Some other discrete probability distributions</i>	94
6.	<b>THE NORMAL PROBABILITY DISTRIBUTION</b>	98
6.1	<i>Frequency distributions of continuous variables</i>	99
6.2	<i>Properties of the normal distribution</i>	101
6.3	<i>A model for the normal distribution</i>	106
6.4	<i>Applications of the normal distribution</i>	109
6.5	<i>Fitting a normal distribution to observed data</i>	111
6.6	<i>Skewness and kurtosis</i>	114
6.7	<i>Graphic methods</i>	117
6.8	<i>Other continuous distributions</i>	126
7.	<b>ESTIMATION AND HYPOTHESIS TESTING</b>	128
7.1	<i>Distribution and variance of means</i>	129
7.2	<i>Distribution and variance of other statistics</i>	137
7.3	<i>Introduction to confidence limits</i>	140
7.4	<i>Student's t-distribution</i>	145
7.5	<i>Confidence limits based on sample statistics</i>	147
7.6	<i>The chi-square distribution</i>	152
7.7	<i>Confidence limits for variances</i>	155
7.8	<i>Introduction to hypothesis testing</i>	157
7.9	<i>Tests of simple hypotheses employing the normal and t-distributions</i>	170
7.10	<i>Testing the hypothesis <math>H_0: \sigma^2 = \sigma_0^2</math></i>	175
8.	<b>INTRODUCTION TO ANALYSIS OF VARIANCE</b>	179
8.1	<i>The variances of samples and their means</i>	180
8.2	<i>The F-distribution</i>	185
8.3	<i>The hypothesis <math>H_0: \sigma_1^2 = \sigma_2^2</math></i>	189

8.4	<i>Heterogeneity among sample means</i>	191
8.5	<i>Partitioning the total sum of squares and degrees of freedom</i>	198
8.6	<i>Model I anova</i>	202
8.7	<i>Model II anova</i>	205
9.	<b>SINGLE CLASSIFICATION ANALYSIS OF VARIANCE</b>	208
9.1	<i>Computational formulas</i>	209
9.2	<i>General case: unequal n</i>	210
9.3	<i>Special case: equal n</i>	219
9.4	<i>Special case: two groups</i>	222
9.5	<i>Special case: a single specimen compared with a sample</i>	229
9.6	<i>Comparisons among means: planned comparisons</i>	232
9.7	<i>Comparisons among means: unplanned comparisons</i>	242
9.8	<i>Finding the sample size n required for a test</i>	262
10.	<b>NESTED ANALYSIS OF VARIANCE</b>	271
10.1	<i>Nested anova: design</i>	271
10.2	<i>Nested anova: computation</i>	274
10.3	<i>Nested anovas with unequal sample sizes</i>	293
10.4	<i>The optimal allocation of resources</i>	309
11.	<b>TWO-WAY ANALYSIS OF VARIANCE</b>	321
11.1	<i>Two-way anova: design</i>	321
11.2	<i>Two-way anova with replication: computation</i>	324
11.3	<i>Two-way anova: significance testing</i>	332
11.4	<i>Two-way anova without replication</i>	344
11.5	<i>Paired comparisons</i>	354
11.6	<i>Unequal subclass sizes</i>	360
11.7	<i>Missing values in a randomized blocks design</i>	364
12.	<b>MULTIWAY ANALYSIS OF VARIANCE</b>	372
12.1	<i>The factorial design</i>	372
12.2	<i>A three-way factorial anova</i>	374
12.3	<i>Higher-order factorials</i>	387
12.4	<i>Other designs</i>	393
12.5	<i>Anova by computer</i>	395
13.	<b>ASSUMPTIONS OF ANALYSIS OF VARIANCE</b>	400
13.1	<i>A fundamental assumption</i>	401
13.2	<i>Independence</i>	401
13.3	<i>Homogeneity of variances</i>	402
13.4	<i>Normality</i>	412

13.5	<i>Additivity</i>	414
13.6	<i>Transformations</i>	417
13.7	<i>The logarithmic transformation</i>	419
13.8	<i>The square root transformation</i>	421
13.9	<i>The Box-Cox transformation</i>	423
13.10	<i>The arcsine transformation</i>	427
13.11	<i>Nonparametric methods in lieu of single classification anova</i>	429
13.12	<i>Nonparametric methods in lieu of two-way anova</i>	445
14.	<b>LINEAR REGRESSION</b>	454
14.1	<i>Introduction to regression</i>	455
14.2	<i>Models in regression</i>	458
14.3	<i>The linear regression equation</i>	461
14.4	<i>Tests of significance in regression</i>	469
14.5	<i>More than one value of Y for each value of X</i>	477
14.6	<i>The uses of regression</i>	491
14.7	<i>Estimation of X from Y</i>	496
14.8	<i>Comparison of regression lines</i>	499
14.9	<i>Analysis of covariance</i>	509
14.10	<i>Linear comparisons in anova</i>	530
14.11	<i>Examination of residuals and transformations in regression</i>	539
14.12	<i>Nonparametric tests for regression</i>	546
14.13	<i>Model II regression</i>	547
15.	<b>CORRELATION</b>	561
15.1	<i>Correlation and regression</i>	562
15.2	<i>The product-moment correlation coefficient</i>	565
15.3	<i>The variance of sums and differences</i>	573
15.4	<i>Computation of the product-moment correlation coefficient</i>	575
15.5	<i>Significance tests in correlation</i>	583
15.6	<i>Applications of correlation</i>	591
15.7	<i>Principal axes and confidence regions</i>	594
15.8	<i>Nonparametric tests for association</i>	601
16.	<b>MULTIPLE AND CURVILINEAR REGRESSION</b>	617
16.1	<i>Multiple regression: computations</i>	618
16.2	<i>Multiple regression: significance tests</i>	631
16.3	<i>Path analysis</i>	642
16.4	<i>Partial and multiple correlation</i>	656
16.5	<i>Choosing predictor variables</i>	661
16.6	<i>Curvilinear regression</i>	671
16.7	<i>Advanced topics in regression and correlation</i>	683

## 17. ANALYSIS OF FREQUENCIES 691

17.1	<i>Tests for goodness of fit: introduction</i>	692
17.2	<i>Single classification goodness of fit tests</i>	704
17.3	<i>Replicated tests of goodness of fit</i>	721
17.4	<i>Tests of independence: two-way tables</i>	731
17.5	<i>The analysis of three-way and multiway tables</i>	747
17.6	<i>Finding the sample size n required to test the difference between two percentages</i>	765
17.7	<i>Randomized blocks for frequency data</i>	767

## 18. MISCELLANEOUS METHODS 779

18.1	<i>Combining probabilities from tests of significance</i>	779
18.2	<i>Tests for randomness: runs tests</i>	782
18.3	<i>Randomization tests</i>	787
18.4	<i>The jackknife</i>	795
18.5	<i>The future of biometry: data analysis</i>	799

## APPENDIXES

A1	<i>Mathematical appendix</i>	806
A2	<i>A package of statistical computer programs</i>	822

## BIBLIOGRAPHY 826
