

TABLE OF CONTENTS

Chapter 1

Somaclonal Variation in Crop Improvement	1 ✓
I. Introduction	1 ✓
II. Terminology	1 ✓
III. Methodological and Experimental Approach	2
IV. Survey of Major Crops for Somaclonal Variation	9
A. Potato	9
B. Tobacco	11
C. Alfalfa	12
D. Wheat	14
E. Rice	16
F. Maize	17
G. Lettuce	18
H. Sugarcane	18
I. Tomato	19
J. Strawberry	19
K. Celery	20
V. Genetic Bases of Somaclonal Variation	20 ✓
A. Changes in Chromosome Number	20 ✓
B. Structural Changes in Chromosomes	30 ✓
C. Point Mutations	31 ✓
1. Spontaneous Mutations	31 ✓
2. Induced Mutations	32 ✓
3. Gene Expression and Gene Amplification and Deamplification	34 ✓
4. Mitotic Crossing-Over and Transposable Elements	35 ✓
5. Changes in Cytogenes	36 ✓
D. Genetic Analysis	37 ✓
VI. Applications	44
A. Strategies for Crop Improvement	46
B. Somatic Cell Selection	50
1. Selection for Ethionine Resistance	50
2. Selection for Salt and Herbicide Tolerance	51
C. Selection for Disease Resistance	52
D. Application in Research	53
VII. Conclusions and Future Prospects	55
References	59

Chapter 2

Role of Tissue Culture in Rapid Clonal Propagation and Production of Pathogen-Free Plants	73 ✓
I. Introduction	73
II. Culture System Steps and Methods of Shoot Induction and Proliferation	74
A. Multiplication by Apical and Axillary Shoots	74
B. Multiplication by Adventitious Shoots	76
C. Multiplication through Callus Culture	77
III. Factors Affecting Morphogenesis and Proliferation Rate	80 ✓
A. Nature of the Donor Plant and Explant	81 ✓

B.	Composition of Culture Media	83 ✓
C.	Culture Environment	86 ✓
D.	Nature of Genotype	89 ✓
IV.	Applications	90 ✓
A.	Production of Pathogen-Free Plants	90 ✓
1.	Meristem Culture	90 ✓
2.	Thermotherapy and Chemotherapy	92 ✓
3.	Factors in Disease Elimination	96
B.	Germplasm Conservation and Exchanges	98
C.	Small-Scale Cloning, Seed Production, and Mass Propagation	99 ✓
V.	Conclusions and Future Prospects	108
References		111

Chapter 3

Protoplasts in Crop Improvement	117
I. Introduction	117
II. Methodology	117
A. Protoplast Isolation and Regeneration	117
1. Isolation	117
a. Factors Affecting Protoplast Isolation	119
i. Leaf Mesophyll Protoplasts	119
ii. Cell Culture Protoplasts	126
iii. Enzymes	126
iv. Osmoticum	127
v. Miscellaneous Isolation Conditions	127
2. Protoplast Purification	127
3. Culture of Protoplasts	129
a. The Feeder Layer Technique	130
i. Protoplast Irradiation	130
ii. Plating of Irradiated Protoplasts	130
4. Cell Wall Regeneration, Cell Division, Organogenesis, and Whole Plant Regeneration	131
B. Protoplast Fusions and Regeneration of Somatic Hybrids	131
1. Fusion and Isolation	131
a. Complementation Methods	133
b. Visual Selection	134
c. Microisolation and Fluorescent Cell Sorting	135
d. Identification by Electrophoresis	137
e. Use of Genetically Transformed Protoplast Cells	137
III. Applications	138
A. Regeneration of Plants from Protoplasts	139
B. Protoplast Transformations by Direct, Chemically Mediated, and Microinjection Methods	145
C. Electroporation of Protoplasts and Transfer of Foreign Genes	149
D. Selection of Mutants	151
E. Protoplasts as a Tool for Quantitative Assay of Phytotoxic Compounds	152
F. Regeneration of Complete Plants with Desired Characters from Somatic Hybrids	152 ✓
1. Interspecific Hybrids	152 ✓
2. Intergeneric Hybrids	158 ✓

3.	Organelle Transfer by Protoplast Fusions and Cytoplasmic Genetic Traits	161
4.	Nuclear Genetic Traits and Their Transfer through Somatic Hybrids	165
IV.	Strategies for the Transfer of New Traits and Development of a New Variety.....	168
A.	Transfer of Organelle and Organelle-Controlled Traits	168
1.	The Donor-Recipient Protoplast Fusion	168
a.	Nature of Donor and Recipient	169
b.	Iodoacetate Perfusion Treatment.....	170
c.	Arrest of Nuclear Division in Donor Protoplasts	170
2.	Selection, Isolation, and Regeneration	170
3.	Identification of Organelle-Controlled Traits	171
a.	Plastome Identification	171
b.	Chondriome Analysis.....	172
B.	Development of a New Variety	173
V.	Conclusions and Future Prospects.....	176
References.....		179

Chapter 4

Cell Selection and Long-Term High-Frequency Regeneration

of Cereals and Legumes		195
I.	Introduction	195
II.	Tissue Culture and Long-Term High-Frequency Regeneration of Cereals and Legumes	196
A.	Explant Source	196
B.	Culture Conditions	200
1.	Rice.....	200
2.	Wheat.....	203
3.	Sorghum	205
4.	Millet	205
5.	Corn	206
6.	Oats.....	207
7.	Soybean.....	207
8.	Pigeon Pea	212
III.	Cell Selection	214
A.	Selection Strategies	214
1.	Callus Initiation and Culture	216
2.	Screening	216
3.	Plant Regeneration	217
4.	Testing of Regenerated Plants and Progeny	217
B.	Selection Methods	218
1.	Callus Selection.....	218
2.	Selection via Suspension Culture	222
3.	Selection via Plated Cells	222
IV.	Applications	223
A.	Salt Tolerance	224
B.	Tolerance to Mineral Stress	235
C.	Herbicide Resistance	237
D.	Disease Resistance	238
V.	Conclusions and Future Prospects.....	243
References.....		246

Chapter 5

Agrobacteria-Mediated Gene Transformation and Vectors for Gene Cloning in Plants

I. Introduction	255
II. Plant Gene Vectors	255
A. <i>Agrobacterium</i> Ti Plasmid System	255
1. Incorporation, Localization, and Organization of T-DNA	256
2. Vectors for <i>Agrobacterium</i> -Mediated Plant Transformation	258
a. Cointegrating Vectors	258
i. Disarmed Vectors	258
ii. Nondisarmed Vectors	259
b. Binary Vectors	260
3. Limitations in Vector Construction and Plant Regeneration	260
4. Selectable Markers for Plant Transformation	261
5. Transformation of Plants	262
a. Cocultivation	262
b. Leaf Disk Transformation	262
B. Caulimovirus System	263
1. Localization and Organization of CaMV	263
2. Use as a Cloning Vector	264
C. Gemini Virus System	267
1. Structural Features	268
2. Use as a Cloning Vector	268
III. Applications	270
A. Pest Resistance Transgenic Plants	270
B. Herbicide Resistance Transgenic Plants	273
C. Transgenic Plants with Marker Genes (Preliminary Success)	276
D. Genetic Transformation of Marker Genes through <i>Agrobacterium</i> for Selection of Hybrid Seeds	278
E. Vector Design to Facilitate the Expression of Foreign Genes	279
F. Agroinfection	280
1. <i>Agrobacterium</i> as an Organism for the Experimental Storage and Transmission of Plant Viruses	281
a. Storage Efficiency and Flexibility	281
b. Viral Genome Release from T-DNA	283
c. T-DNA Transfer and Its Analysis	284
2. Transformation of Plant Cells with Viral Genetic Information	285
a. Transient Expression	285
b. Expression of Viral Genes in Host and Nonhost Plants	285
c. Transgenic Plants Containing Oligomers of Viral Genomes	286
d. Superinfection of Plants Transgenic for Viral Sequences	288
3. Satellite Defenses for Plants	289
Acknowledgments	292
References	292

Chapter 6	
Plant Frost Injury and Its Management	299
I. Introduction	299
II. Supercooling of Water and Ice Formation	299
III. Ice Nucleation-Active Bacteria on Plant Surface and Frost Damage	300
A. Types of Ice Nuclei-Active Bacteria	301
B. Distribution of INA Bacteria on Plant Surfaces	303
1. Factors Affecting the Distribution of INA Bacteria	303
a. Variation Due to Plant Species and Plant Parts	303
b. Seasonal Variations	304
C. Activity of INA Bacteria	304
1. Variation Among Different INA Bacteria	304
2. Variation Due to Temperature	305
3. Population Density of INA Bacteria	307
4. Miscellaneous Conditions	307
D. Quantitative Estimation of INA Bacteria	308
IV. Control of Plant Frost Injury	309
A. Traditional Methods	309
B. Bactericides	309
C. Antagonistic Bacteria	312
1. Factors Affecting the Activity of Antagonistic Bacteria	314
a. Time of Inoculation of Plants with Antagonists	314
b. Effect of Inoculum Size of Non-INA Bacteria (Antagonists)	315
c. Time of Inoculation in Relation to Host Plant	317
D. Construction and Use of Ice ⁻ Bacteria for the Control of INA Bacteria	319
1. Construction of Ice Nucleation-Deficient Bacteria	319
2. Use of Ice ⁻ Site-Directed Deletion Mutant of <i>Pseudomonas syringae</i> for Frost Control	323
E. Control of Almond, Pear, Tomato, and Potato	334
F. Mechanisms of Antagonism	335
G. Molecular Mechanisms of Ice Nucleation	337
Acknowledgments	338
References	338
Index	345
