Preface to the first edition	<i>page</i>	ix
Preface to the second edition		xi
<b>1. THE GENETICAL FOUNDATION</b>		
1. Biometry and genetics		1
2. Polygenic segregation and linkage		5
3. Locating the genes		13
4. Linkage between genes affecting different characters		20
5. Polygenes and major genes		23
<b>2. CHARACTERS</b>		
6. Phenotype and genotype		33
7. Genetic analysis and somatic analysis		37
8. Sub-characters and super-characters		42
<b>3. SOURCES OF VARIATION: SCALES</b>		
9. Genic variation		49
10. Plasmatic variation		53
11. Interaction of genotype and environment		56
12. The principles of scaling		61
<b>4. COMPONENTS OF MEANS: ADDITIVE AND DOMINANCE EFFECTS</b>		
13. Additive and dominance components		65
14. Scaling tests		71
15. Transformation of the scale		77
<b>5. COMPONENTS OF MEANS: INTERACTION AND HETEROESIS</b>		
16. Non-allelic interactions		83
17. Detection of non-allelic interaction		89

18. Linkage of interacting genes	96	50. Maternal effects : crosses between inbred lines	293
19. Genotype $\times$ environment interaction : specification and detection	104	51. Maternal effects : multiple crosses	298
20. Genotype $\times$ environment interaction : segregating generations	113	52. Haploids	300
21. Heterosis	119	53. Polyploids	305
22. Heterosis and genotype $\times$ environment interaction	124		
23. The limitations of first degree statistics	125		
<b>6. COMPONENTS OF VARIATION</b>		<b>11. THE NUMBER OF EFFECTIVE FACTORS</b>	
24. Variation in $F_2$ and backcrosses	127	54. The sources of estimates	308
25. Generations derived from $F_2$ and backcrosses	130	55. The process of estimation	314
26. The balance sheet of variation	137	56. The interpretation of effective factors	324
27. Partitioning the variation	139	57. The speed of advance under selection	331
28. Weighted analysis	156		
29. The general case	164		
<b>7. INTERACTION AND LINKAGE</b>		<b>12. EXPERIMENTS AND CONCEPTS</b>	
30. The effect of interaction	172	58. Experimental design	337
31. The effect of linkage	177	59. Dominance and interaction	350
32. The test of linkage	187	60. The effective factor	355
33. Genotype $\times$ environment interaction	201		
<b>8. RANDOMLY BREEDING POPULATIONS</b>		References	367
34. The components of variation	209	Index	377
35. Natural populations	217		
36. Twins	220		
37. Experimental populations	225		
38. Experimental populations : North Carolina design 2 and dialles	235		
39. The triple test cross	244		
40. Random mating of a partially inbred population	245		
<b>9. DIALLELS</b>			
41. Components of variation in dialles	249		
42. Analysis of variance of diallel tables	254		
43. The relations of $V_r$ and $W_r$	260		
44. Estimating the components of variation	268		
45. Derived dialles	271		
46. Non-allelic interaction in dialles	272		
47. Gene association and dispersion	280		
<b>10. DEPARTURES FROM SIMPLE DISOMIC INHERITANCE</b>			
48. Sex-linkage : crosses between inbred lines	285		
49. Sex-linkage : dialles and randomly breeding populations	291
