

# **Table of Contents**

## **Overview of Structural Concepts**

What Are Structural Concepts?

Why Study Structural Concepts?

Approaches to Learning Structural Concepts

Organisation of the Text

How to Use This Book

## **STATICS**

### **Equilibrium**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

### **Centre of Mass**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

### **Effect of Different Cross Sections**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

### **Stress Distribution**

Concepts

Theoretical Background

Model Demonstrations

Practical Examples

### **Bending**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

### **Shear and Torsion**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

## **Span and Deflection**

Concepts

Theoretical Background

Model Demonstrations

Practical Examples

## **Direct Force Paths**

Definitions, Concepts and Criteria

Theoretical Background

Model Demonstrations

Practical Examples

## **Smaller Internal Forces**

Concepts and a Criterion

Theoretical Background

Model Demonstrations

Practical Examples

## **Buckling**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

## **Prestress**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

## **Horizontal Movements of Structures Induced by Vertical Loads**

Concepts

Theoretical Background

Model Demonstrations

Practical Examples

## **DYNAMICS**

### **Energy Exchange**

Definitions and Concepts

Theoretical Background

Model Demonstrations

Practical Examples

### **Pendulums**

Definitions and Concepts

Theoretical Background

Model Demonstrations  
Practical Examples

### **Free Vibration**

Definitions and Concepts  
Theoretical Background  
Model Demonstrations  
Practical Examples

### **Resonance**

Definitions and Concepts  
Theoretical Background  
Model Demonstrations  
Practical Examples

### **Damping in Structures**

Concepts  
Theoretical Background  
Model Demonstrations  
Practical Examples

### **Vibration Reduction**

Definitions and Concepts  
Theoretical Background  
Model Demonstrations  
Practical Examples

### **Human Body Models in Structural Vibration**

Concepts  
Theoretical Background  
Demonstration Tests  
Practical Examples

## **SYNTHESIS**

### **Static and Modal Stiffnesses**

General Comments on Stiffness  
Definitions of the Static Stiffness and Modal Stiffness  
The Relationship between Static and Modal Stiffnesses of a Structure  
Verification  
Application  
Discussion  
Summary

### **Static and Dynamic Problems**

Preliminary Comments  
Maximum Displacement and Fundamental Natural Frequency  
Buckling Load and Fundamental Natural Frequency  
Periodic Dynamic Loads and Corresponding Static Loads  
Tension Force and Fundamental Natural Frequency  
Summary

**Experimental and Theoretical Studies**

Characteristics of Experimental and Theoretical Studies

Modelling the Relationships between Experimental and Theoretical Studies

Comparison Model

Integration Model

Verification Model

Explanation Model

Creation Model

Extension Model

Links between the Relationship Models

**Theory and Practice**

Preliminary Comments

Theoretical and Practical Sources for Structural Concepts

Relationship between Theory and Practice

Bridging the Gaps between Theory and Practice

Summary
