

Contents

Preface

Introduction

1. Basic Components

- Nomenclature of Compounds
- Structure
- Shorthand Notation
- References

2. The Cell

- The Prokaryotic Cell
- The Eukaryotic Cell
- References

3. DNA, RNA, and Genes

- History of DNA
- Genes
- DNA
- RNA
- Chemical Synthesis of DNA
- References

4. Protein Synthesis	57
Proteins	57
Differences in Prokaryotic and Eukaryotic DNA and RNA	66
References	72
5. Enzymes	75
Nucleases	76
Site-Specific Restriction Endonucleases	77
Enzymes Used in Recombinant DNA Technology	77
Cleaving of RNA	81
References	81
6. Plasmids, Viruses, and Microbial Hosts—Vectors	83
Plasmids	83
Chromatographic Plasmid Isolation	89
Viruses	94
Viruses Infecting Eukaryotes	102
Microbial Hosts	103
Hosts	104
Availability of Biologicals	108
References	108
7. Recombinant Techniques	111
Basic Concepts	111
Generalized Scheme	112
Cutting Sites of Vectors	116
DNA Denaturation and Renaturation	117
Cleaving of DNA	118
Creation of Cohesive Ends	120
Recombining DNA Fragments	122
Bacterial Hosts Cloning Vehicles	127
Cloning	127
The Cloning Process	127
Specific Clones	129
Cloning in Mammalian Cells	131
Commercialization	134
References	136
8. Nucleotide Sequencing and Hybridizing	139
The Sequencing Gel	140
Sequencing Methods	140

CONTENTS

vii

Specific Methods	141
Chemical Sequencing Method	145
References	153
9. Plant Genetics	155
Gene Transfer Procedures	155
References	161
10. Genetic Engineering Activities	165
Fields of Endeavor	165
Somatostatin	166
Insulin	170
Commercial Synthesis of Human Insulin	171
Human Growth Hormone (HGH)	174
Interferons	183
Superbug	192
Creation of Other Synthetic Recombinants	192
Antihemophilic Agents	194
Synthetic Vaccines	194
Nonrecombinant Genetic Engineering	197
Applications of Monoclonal Antibodies	203
Fact or Fiction?	204
Genetic Engineering Extended	205
Addendum	205
References	205
11. Technology and Design	209
Technology Aspects	209
Technology: Laboratory Scale	210
Design Considerations	211
Design Classification	213
Equipment Design Features	216
Addendum	224
References	224
12. Techniques with Mammalian Cells	227
Gene Introduction to a Mammalian Cell	227
Human β -Globulin Gene in a Mammal	229
Human Genetics	229
Gene Therapy	235
References	242

13. Precautions and Regulations	243
Patent Situation	244
Economic Aspects	244
Documentation	245
Supervision Concerns	245
Epilogue	245
References	246
14. Update	247
Review Type Publications	247
Current Literature	248
Basic Studies	249
Plant Genetics	251
Medicines and Medical Applications	252
Technology	257
References	258
<i>Appendices</i>	263
<i>Index</i>	283
