<b>Foreword</b>	<b>iv</b>
<b>Acronyms / Abbreviations</b>	<b>ix</b>
<b>Preface</b>	<b>xi</b>
 <b>Executive Summary</b>	 <b>2</b>
 Chapter 1	
<b>Introduction</b>	<b>6</b>
1.1 The uses of agaves	6
1.2 The need for research and innovation	7
1.3 The role of plant biotechnology	8
 Chapter 2	
<b>Genetic Improvement</b>	<b>10</b>
2.1 Introduction	10
2.2 The reproductive biology of agaves	11
2.2.1 Sexual reproduction	
2.2.2 Asexual propagation	
2.3 Problems associated with the genetic improvement of agaves	16
2.4 Genetic improvement of agaves	16
2.4.1 Is there enough genetic variability in the populations of agaves?	17
2.4.2 Selection	17
2.4.3 Production of hybrids through controlled polinization	18
2.4.4 Open pollination	19
2.5 Biotechnological alternatives	20
 Chapter 3	
<b>Agave Tissue Culture Research</b>	<b>22</b>
3.1 A brief introduction to Micropropagation	22
3.2 The organogenic and embryogenic pathways	23
3.2.1 Callus formation	23
3.2.2 Direct organogenesis	23
3.2.3 Indirect organogenesis	24
3.2.4 Somatic embryogenesis	24
3.3 <i>Agave</i> tissue culture	24

3.3.1 Micropropagation through direct organogenesis	24
3.3.2 Micropropagation through indirect organogenesis	25
3.3.3 Micropropagation through direct somatic embryogenesis	26
3.3.4 Micropropagation through indirect somatic embryogenesis	26
3.4 Meristem culture	27
3.5 Present trends in Agave biotechnology research	28

## Chapter 4

<b>Guidelines for the Establishment of a Micropropagation Protocol for Agaves</b>	<b>32</b>
4.1 Objectives	32
4.2 Establishing a protocol	32
4.3 A method for an efficient micropropagation of <i>Agave</i> species	33
4.3.1 Selection of the "elite" mother plants	34
4.3.2 Sources of explants	35
4.3.2.1 Rhizomes	35
4.3.2.2 Other sources of explants	37
4.3.3 Pre-conditioning of donor plants	37
4.3.4 Extraction of the meristematic tissues	38
4.3.5 Disinfestation of the explants	40
4.3.6 Cutting of explants	41
4.3.7 Induction: Culturing the explants	42
4.3.7.1 Separation of the induced plantlets	45
4.3.8 Multiplication	45
4.3.9 Growth	46
4.3.10 <i>In vitro</i> pre-adaptation	48
4.3.11 <i>In vitro</i> rooting	49
4.4 Common Problems	50
4.4.1 Browning	50
4.4.2 Vitrification	50
4.4.3 Seasonal variation	51
4.4.4 Intra and inter specific variation	51

## Chapter 5

<b>Experiments Recommended to Optimize the Protocols</b>	<b>54</b>
5.1 Introduction	54
5.2 Selection of explants and disinfestations method	54
5.2.1 Sources of explants	54
5.2.2 Disinfestation	55
5.3 Suggested experiments for the induction of explants and the multiplication stages	56

5.3.1 Concentrations of growth regulators	56
5.3.2 Culture media	58
5.3.3 NO <sub>3</sub> /NH <sub>4</sub> balance and total nitrogen	58
5.3.4 Type of sugar and concentration	58
5.3.5 Gelling agent	59
5.3.6 Other components of the culture medium	59
5.3.7 Light and photoperiod	59
5.4 General recommendations	60
5.4.1 Continuous observation and record keeping	60
5.4.2 Photography	60
5.4.3 Quality control	60

## Chapter 6

<b>Transfer to Soil</b>	<b>62</b>
6.1 Introduction	62
6.2 <i>In vitro</i> pre-adaptation	63
6.3 Transfer to soil and weaning in the green house	63
6.4 Growth under shading	67
6.5 Transfer to nurseries	68
6.6 Field testing micropropagated materials	69
6.6.1 Controls	70
6.6.2 Measurements	70
6.7 Further selection	70

## Chapter 7

<b>Control of Microbial Contamination</b>	<b>74</b>
7.1 Introduction	74
7.2 Plant-microbe interactions	75
7.3 Main pathogenic and symbiotic microorganisms associated with agaves:	76
7.3.1 Fungi	76
7.3.2 Bacteria	76
7.4 Establishment and maintenance of aseptic cultures	77
7.5 Detection of the presence of microbial contaminants in plant tissues	77
7.5.1 Culture in liquid and semisolid media	78
7.5.2 Protocol for the detection of microbial contaminants in cultured tissues	79
7.5.2.1 Detection of environmental contaminants	80
7.6 Techniques for decontamination	80
7.6.1 Meristem culture	80
7.6.2 Thermootherapy	81

7.6.3 Chemical biocides	81
7.6.4 Antibiotics	82
7.7 Techniques for identification of microbial contaminants	82
7.7.1 Use of nutritional kits	82
7.7.2 Fatty acid profile	83
7.7.3 Polymerase Chain Reaction (PCR)	83
7.7.4 Amplified Fragment Length Polymorphism (AFLP)	83
7.8 Prevention of microbial contamination in the laboratory	83
7.8.1 Laboratory cleanliness	84
7.8.2 Manipulations	84

## Chapter 8

<b>Design of a Large Scale Production Scheme</b>	<b>88</b>
8.1 Applied micropropagation	88
8.2 Large scale protocols	88
8.3 Design of a large scale production line	89
8.4 Flow chart for production control (an example)	90
8.5 How to use the flow chart	92
8.5.1 How many plants can be produced?	93
8.5.2 Calculation of required inputs	93
8.5.2.1 Culture Media	93
8.5.2.2 Culture Dishes	93
8.5.2.3 Incubation Capacity	94
8.5.2.4 Calculation of Production Costs	94

## Chapter 9

<b>Alternative New Techniques for the Micropropagation of Agaves</b>	<b>98</b>
9.1 Introduction	98
9.2 Somatic embryogenesis	98
9.2.1 Somatic embryogenesis in <i>Agave fourcroydes</i>	99
9.2.2 The RITA system	99
9.3 Culture in liquid media	100
9.3.1 Temporary immersion	101
9.4 BioMINT	102
9.4.1 The equipment	102

<b>Final considerations</b>	<b>108</b>
<b>References</b>	<b>112</b>
<b>Glossary</b>	<b>122</b>

<b>Annexes</b>	<b>131</b>
Annex I Preparation of Plant Tissue Culture Media	132
Annex II Reagents and Equipment	137
Annex III Laboratories that Identify Microbial Contaminants	141
Annex IV Directory of Laboratories and Scientists Working on Agave Tissue Culture	143
