Preface	ix
Introduction	1
1. Theory Structure and Foundational Issues in Evolutionary Biology	5
1.1 The Theory of Evolution as a Family of Interacting Models	6
1.2 Sociobiology and Testability	15
1.3 Culture and the Evolutionary Process	17
2. The Syntactic Conception of Theory Structure	23
2.1 Formal Languages and Formal Systems	26
2.2 Euclidean Geometry as a Formal System	27
2.3 Mathematical Logic and the Formal Structure of Scientific Theories	31
2.4 Empirical Interpretation of a Formal System	34
2.5 Laws, Explanation, Prediction, and Testing	36
2.6 Criticisms of This Conception	39
2.7 Summary	43
3. Syntactic Conceptions of Evolutionary Theory	51
3.1 The Population-Genetical Account of Michael Ruse	53
3.2 The Selection Theory Accounts of Mary Williams and Alexander Rosenberg	56
3.3 The Insights and Inadequacies of These Accounts	58
4. The Semantic Conception of Theory Structure	69
4.1 Models of Formal Systems	70

4.2	Theories as Specifications of a Class of Models	71
4.3	The Set-Theoretical Approach	74
4.4	The State Space Approach	77
4.5	Summary	81
5.	A Semantic Conception of the Structure of Evolutionary Theory	85
5.1	A Semantic Conception of Population Genetics	85
5.2	Faithfulness to Foundational Work in Genetics	92
5.3	A Semantic Conception of Evolutionary Theory as a Family of Interacting Models	95
6.	Sociobiology	101
6.1	Explanation and Testability	101
6.2	Intelligence-based Behavior	107
7.	Culture and the Evolutionary Process: Multitheoretic and Multilevel Explanatory Causal Chains	117
7.1	Evolutionary Epistemology	117
7.2	Evolutionary Ethics	125
	Conclusion	129
	Bibliography	131
	Index	145
