<i>Preface</i>	vii

Introduction

1	The Current Scene in Plant Taxonomy V. H. HEYWOOD	3
	Introduction 3	
	The rise of numerical taxonomy 4	
	New sources of taxonomic characters 6	
	1 Chromosome information – cytotaxonomy 7	
	2 Chemical information – chemosystematics 8	
	3 Scanning and transmission electron microscopy – microcharacters 9	
	Biosystematics at the crossroads 10	
	Floristics 11	
	Taxonomic indexes and bibliographies 12	
	Symposia and conference volumes 12	
	Early evolution of the angiosperms 13	
	Systems of classification of higher taxa 14	
	Conclusions 15	
	References 15	

Institutional Resources

2	Libraries and Herbaria J. CULLEN	25
	Introduction 25	
	Service to the user 26	
	Organization and reassessment of priorities 31	
	Conclusions 37	
	References 38	
3	Botanic Gardens and Experimental Grounds P. S. ASHTON	39
	Introduction 39	
	The divorce between systematics and living plants 40	
	The role of gardens in systematics 42	
	Conclusions 45	
	References 46	

Recent Approaches in Morphology and Anatomy

4	Vegetative Morphology – Some Enigmas in Relation to Plant Systematics P. B. TOMLINSON	49
	Introduction 49	
	Theoretical Considerations 51	
	1 Modular and unitary construction 51	
	2 Deterministic and opportunistic processes 52	
	3 Adaptive radiation of floral mechanisms 53	
	4 Correlation of characters 53	
	Architecture in systematics 55	
	1 Lack of systematic association 55	
	2 Woody monocotyledons 56	
	3 Shoot morphology 57	
	4 Seedling morphology 57	
	Neglected features 57	
	Structural and functional correlations 58	
	An evolutionary process 60	
	1 Evolutionary morphology of <i>Tillandsia usneoides</i> 61	
	Modular plasticity 63	
	1 Homology in modular organisms 63	
	Conclusion 64	
	Acknowledgements 65	
	References 65	
5	The Taxonomic Importance of the Leaf Surface C. A. STACE	67
	Introduction 68	
	The use of leaf-surface characters 69	
	Genetic control and phenotypic plasticity 71	
	Developmental studies 73	
	Evolutionary studies 74	
	Techniques 76	
	The leaf-surface characters 80	
	1 Trichomes 80	
	2 Venation systems 82	
	3 Epidermal cells 83	
	4 Stomata 85	
	5 Cuticular membrane 88	
	6 Epicuticular secretions 89	
	7 Special structures 90	
	Acknowledgements 90	
	References 90	

6	Microstructural Features of Seed Surfaces	W. BARTHLOTT	95
	Introduction		95
	Arrangement of seed-coat cells		97
	Shape of cells: the primary sculpture		99
	Fine relief of the cell wall: the secondary sculpture		101
	Epicuticular secretions: the tertiary sculpture		102
	Conclusions		102
	Acknowledgements		103
	References		104
7	Systematic Anatomy and Embryology – Recent Developments		107
	D. F. CUTLER		
	Introduction		108
	Secondary xylem		108
	Ultrastructure		114
	Vascular systems		116
	Nodal anatomy		116
	Leaf vasculature		116
	Epidermal studies		117
	1 Plant surfaces		117
	2 Stomata		117
	3 Trichome types		118
	The leaf		118
	1 Morphology and development		118
	2 Photosynthetic pathways		119
	3 Sclereids		119
	Floral studies		119
	1 Stigmas		119
	2 Nectaries and secretory tissues		120
	3 Ligules		120
	4 Petals		120
	Seeds		120
	Data banks and computer analysis		121
	Embryology		121
	1 Integuments		122
	2 Ovules		123
	3 Taxonomic applications		123
	Major anatomical series of publications		124
	Acknowledgements		125
	References		125
8	Pollen Features and Plant Systematics	S. BLACKMORE	135
	Introduction		135
	Some recent techniques in palynology		136

Current approaches in palynology	141
1 Pollen Floras	141
2 Ontogenetic studies	141
3 Pollen form and function	145
4 Studies of unacetolysed pollen	149
5 Fundamental structure of the exine	150
Conclusions	151
Acknowledgements	151
References	151

Karyology and Genetics

9 Chromosomal Evidence in Taxonomy	J. GREILHUBER	157
Introduction	158	
Chromosome techniques	158	
Heterochromatin	160	
1 Heterochromatin variation	160	
2 Chromosome banding as a tool in taxonomy	161	
Euchromatin	171	
Conclusions	175	
Acknowledgements	175	
References	175	
10 Variation, Polymorphism and Gene-flow within Species	Q. O. N. KAY	181
Introduction	182	
Dioecy	183	
Floral scent	185	
Ultraviolet floral characters	186	
Floral colour	191	
Variation and gene-flow	195	
References	196	

Ecology and Geography

11 Intraspecific Variation and its Taxonomic Implications	R. W. SNAYDON	203
Introduction	204	
The nature of variation	205	
The patterns of variation	206	
1 The genetic pattern	206	
2 The geographical pattern	206	
3 Analysis of patterns	207	

	Magnitude of variation	208
	Interspecific hybrids and gene-flow	209
	The role of speciation	211
	Intraspecific classification	212
	Conclusions	214
	References	215
12	Taxonomy and Geography	D. M. MOORE
	Introduction	219
	The changing face of taxonomy	220
	1 Morphology	220
	2 Biosystematics	222
	3 Phytochemistry	226
	The changing face of geography	228
	Whither now?	230
	References	231

Chemistry, Taxonomy and Systematics

13	Chemical Data in Practical Taxonomy	J. B. HARBORNE	237
	Introduction	237	
	Newer chemical techniques	239	
	1 Analysis of low molecular weight constituents	239	
	2 Analysis of proteins and nucleic acids	242	
	Chemical identification of plant cultivars	243	
	1 Crop plants	243	
	2 Ornamental plants	247	
	Chemistry of plant hybrids	250	
	Chemistry in taxonomic revision	253	
	References	258	
14	Phytochemistry in Plant Systematics and Evolution	K. KUBITZKI	263
	Introduction	263	
	Chemosystematic criteria	264	
	Chemistry in classification	265	
	Tracing evolution	268	
	Causes and mechanisms of phytochemical change	270	
	Conclusions	272	
	Acknowledgements	273	
	References	273	

Data Processing and Taxonomy

| 15 | Taximetrics To-day J. McNEILL
Introduction 281
The nature of taximetrics 283 <ul style="list-style-type: none"> 1 Phenetic classification and inumercal taxonomy 283 2 Objectivity: reality or illusion? 283 3 The scope of taximetrics 284 Taximetric methods and taxonomic purpose 285 <ul style="list-style-type: none"> 1 Taximetric applications 285 2 Grouping of individuals 286 3 Hierarchical ordering of taxa 291 4 Continuous variation 294 5 Other taxonomic situations 294 Conclusions 295
Acknowledgements 296
References 296 | 281 |
| 16 | Automated Taxonomic Information Systems F. A. BISBY
The dream 301 <ul style="list-style-type: none"> 1 Information content 302 2 Information meaning 303 3 Floras, monographs and interconnections 306 4 Information services 306 The reality 307 <ul style="list-style-type: none"> 1 Floristic projects 307 2 Monographic projects 309 Data structure 313 <ul style="list-style-type: none"> 1 Character structure 314 2 Character formulation 316 3 Character selection 317 Data-base structure 317
Concluding remarks 319
Acknowledgements 320
References 320 | 301 |
| 17 | Cladistic Methodology C. J. HUMPHRIES and V. A. FUNK
Introduction 324
Synapomorphies and homology 326 <ul style="list-style-type: none"> 1 Approaches to systematics 326 2 Monophyletic groups 328 3 Parsimony 330 | 323 |

Criteria for assessing apomorphies	333
1 Common is primitive	333
2 Ontogeny	334
3 Out-group comparison	336
Homoplasy – parallelism and convergence	341
Reticulate evolution	343
Classification	346
Example	350
Conclusions	355
Acknowledgements	355
References	356

Taxonomic Priorities

18	Completing the Inventory	G. T. PRANCE	365
	Introduction		366
	The problem of rare species in the tropics		368
	The problem of neglected areas		377
	What is inventory?		378
	1 Special collections		379
	2 Biological data		379
	3 Quantitative inventory		380
	4 Plant groups to be collected		382
	5 Remote sensing		384
	The written inventory and data processing		385
	The deposition of specimens		386
	Conservation and inventory		390
	Acknowledgements		392
	References		392
19	Designing Floras for the Future	V. H. HEYWOOD	397
	Introduction		397
	Floras as front-line publications		401
	Floras as data-bases		403
	Floras and the consumer		404
	Floras and the new technology		406
	Conclusions		408
	References		408
20	Taxonomic Problems Relating to Endangered Plant Species		411
	E. S. AYENSU		
	<i>Subject Index</i>		422
	<i>Systematics Association Publications</i>		431
