Chapter 1

Studies of Regulation of Hexose Transport into Cultured Fibroblasts

HERMAN M. KALCKAR AND DONNA B. ULLREY

1. Introduction	1
2. Hexose Uptake or Transport Tests	2
2.1. Effects of Cycloheximide on Hexose Transport Regulation ..	4
2.2. Is the Release of the Mediated Curb of the Hexose Transport System Dependent on Transcription?	6
3. Metabolic Pathways	6
4. Characterization of Certain Cellular Macromolecules and Structures	11
4.1. Enzyme Assays of the Hexose Uptake System in Lysed Cells	11
4.2. Membrane-Associated Glucose-Binding Proteins Released without Cell Lysis	12
4.3. Studies on Isolated Plasma Membrane Preparations in Regard to Their Hexose Transport Population and Identification of Specific Transport Proteins	13
5. Effects of Glucose Starvation on a Variety of Plasma Membrane Proteins	15
6. The Glucose-Mediated Curb of Hexose Transport Requires Oxidative Energy	16
7. Nucleoside Triphosphate Levels in Cultured Fibroblasts as a Function of General Metabolism and Nutrition	17

8. Hexose Transport Regulation and Oncogenic Transformation of Cultured Fibroblasts	19
9. Evolutionary Aspects	22
References	23

Chapter 2

The Utilization of Carbohydrates by Animal Cells: An Approach to Their Biochemical Genetics

MICHAEL J. MORGAN AND PELIN FAIK

1. The Utilization of Carbohydrates	29
2. Glycolysis	38
2.1. Glucokinase	38
2.2. Hexokinase	39
2.3. Phosphoglucose Isomerase	40
2.4. Phosphofructokinase	40
2.5. Glyceraldehyde-3-phosphate Dehydrogenase	42
2.6. Phosphoglycerate Kinase	43
2.7. Other Glycolytic Enzymes	44
3. The Provision of Energy	45
3.1. Pyruvate Metabolism	46
4. Pentose Phosphate Pathway	47
4.1. Glucose-6-phosphate Dehydrogenase	49
5. Differentiation	51
5.1. Alternative Carbon Sources	53
5.2. Gluconeogenesis	63
6. Other Effects of Carbohydrates	66
6.1. Effects on Morphology	66
6.2. Glucose-Regulated Proteins	67
6.3. Hypergravity	68
7. Concluding Remarks	68
References	69

Chapter 3

Biochemical Genetics of Respiration-Deficient Mutants of Animal Cells

IMMO E. SCHEFFLER

1. Introduction	77
2. The Selection of Respiration-Deficient Mammalian Cell Mutants ..	79

2.1. Characterization of the First Mutant	79
2.2. Protocol for the Isolation of Additional Mutants	84
3. Glycolysis and Respiration in Wild-Type Parents and res ⁻ Mutants	86
4. Biochemical Characterization of Mutants	89
4.1. Defect in NADH-CoQ Reductase	89
4.2. Defect in Succinate Dehydrogenase	92
4.3. Defect in Mitochondrial Protein Synthesis	93
5. Genetic Characterization of Mutants	99
6. Work in Progress and Future Prospects	102
7. Summary	105
References	106

Chapter 4

Glutaminolysis in Animal Cells

WALLACE L. MCKEEHAN

1. Glutamine Metabolism in Mammals	111
2. Glutaminolysis in Tissues	112
2.1. Liver and Kidney	112
2.2. Brain	112
2.3. Pancreas	113
2.4. Mammary Gland	113
2.5. The Intestine	113
2.6. Embryonic and Placental Tissue	114
2.7. Tumors	114
3. Glutaminolysis in Isolated Tissues and Primary Cell Suspensions ..	115
3.1. Enterocytes	115
3.2. Blood Cells	116
3.3. Lens	116
3.4. Germ Cells	117
3.5. Calvaria	117
3.6. Astrocytes	117
4. Glutaminolysis in Normal and Tumor Cells in Culture	118
4.1. Tumor-Derived Cells and Transformed Cell Lines	118
4.2. Untransformed Normal Cells in Culture	119
5. Glutaminolysis—The Pathway of Glutamine Oxidation	121
5.1. Enzymology	121
5.2. Compartmentation	129
5.3. Regulation of Glutaminolysis	130

6. Glutaminolysis and Glycolysis in Cell Growth and Function	132
6.1. The Role of Glycolysis in Cell Proliferation	133
6.2. Can Cells Proliferate in the Absence of Glutaminolysis?	134
6.3. The Role of Glutaminolysis in Cell Specialization	136
6.4. Potential Impact of Tumor Glutaminolysis on Host Glutamine and Glucose Metabolism	136
7. Conclusions	138
8. Addendum	139
References	139

Chapter 5

The Metabolism and Utilization of Carbohydrates by Suspension Cultures of Plant Cells

GAGIK STEPAN-SARKISSIAN AND MICHAEL W. FOWLER

1. Introduction	151
2. Carbon Sources for Culture Growth	152
2.1. The Range of Carbon Sources Tested	152
2.2. Effects on Growth (Physiology and Biochemistry)	159
2.3. Effects on Natural Product Synthesis	162
3. Uptake Mechanisms for Carbon Sources	165
3.1. Differential Mechanisms	166
3.2. Cellular Location	168
3.3. Effect of Internal Pools	170
4. Intracellular Fate of Carbon Source—Biochemistry: Oxidation, Biosynthesis, Storage	171
5. Summary Comments	175
References	175

Chapter 6

Carbohydrate Metabolism in African Trypanosomes, with Special Reference to the Glycosome

ALAN H. FAIRLAMB AND FRED R. OPPERDOES

1. Introduction	183
1.1. General Background and Scope	183
1.2. Biology of the Kinetoplastida	184

1.3. Medical and Economic Importance of African Trypanosomiasis	185
2. Life Cycle	186
3. Methods for Cultivation	188
3.1. Mammalian Forms of <i>T. brucei</i>	188
3.2. Insect Forms of <i>T. brucei</i>	190
4. Substrates and End Products of Metabolism	190
4.1. Mammalian Forms	191
4.2. Insect Forms of the <i>brucei</i> Subgroup	194
5. Terminal Respiratory Systems	195
5.1. Mammalian Forms	195
5.2. Insect Forms	197
6. The Glycosome	199
6.1. Occurrence	199
6.2. Isolation and Purification	199
6.3. General Properties	200
6.4. Glycosomal Enzymes in <i>T. brucei</i>	203
7. Pathways of Glucose Metabolism	205
7.1. Long-Slender Trypomastigotes	205
7.2. Short-Stumpy Trypomastigotes	209
7.3. Procyclic Trypomastigotes	209
8. Glycolysis as a Target for Chemotherapy	213
8.1. Energy Metabolism	213
8.2. Action of Trivalent Aromatic Arsenicals	214
8.3. Action of Suramin	214
8.4. Action of SHAM-Glycerol	215
9. Summary and Outlook	216
References	217

Chapter 7

Sugar Transport Systems of Baker's Yeast and Filamentous Fungi

ANTONIO H. ROMANO

1. Yeast	225
1.1. Monosaccharide Transport Systems	232
1.2. Disaccharide Transport Systems	232
2. Filamentous Fungi	234
2.1. <i>Aspergillus nidulans</i>	234
2.2. <i>Neurospora crassa</i>	237
References	241

Chapter 8

Carbohydrate Metabolism in Yeast

JUANA M. GANCEDO

1. Introduction	245
2. Methodological Approaches	246
2.1. Determination of Enzymatic Activities	246
2.2. Determination of Metabolite Levels	247
2.3. Fate of Labeled Substrates: Calculation of the Proportion of Carbohydrates Used through Different Pathways	249
2.4. Continuous Cultures versus Batch Cultures	250
2.5. Use of Mutants	251
3. Overview of the Pathways of Carbohydrate Metabolism	254
3.1. Glycolytic Pathway	255
3.2. Metabolism of Carbohydrates Other Than Glucose	262
3.3. Pentose Phosphate Pathway	263
3.4. Citric Acid Cycle	265
3.5. Reserve Carbohydrates	266
4. Regulatory Mechanisms	268
4.1. Catabolite Repression	269
4.2. Catabolite Inactivation	270
4.3. Pasteur Effect and Other Effects	271
4.4. Futile Cycles	273
5. Conclusions	274
References	275

Chapter 9

*Regulation of Carbon Metabolism in Filamentous Fungi*WILLIAM McCULLOUGH, CLIVE F. ROBERTS, STEPHEN A.
OSMANI, AND MICHAEL C. SCRUTTON

1. Introduction	287
2. Extracellular Formation of Hexoses from Polysaccharides	292
2.1. Cellulose Degradation	292
2.2. Hemicellulose (Xylan) Degradation	297
2.3. Starch Degradation	298
3. Growth on Glucose and Related Carbon Sources	299
3.1. General Considerations	299

3.2. Enzymes of Hexose Metabolism	304
3.3. Synthesis of Reserve Carbohydrates	310
3.4. Pathways of "Overflow Metabolism" and Their Control ...	314
4. Growth on Three-Carbon Substrates	324
4.1. Glycerol	324
4.2. Pyruvate and Related Substrates	327
5. Growth on Acetate or Ethanol	328
5.1. General Considerations	328
5.2. Enzymes of Acetate or Ethanol Metabolism	333
6. Growth on Substrates Utilized via the Tricarboxylic Acid Cycle .	337
7. Conclusions	340
References	340

Chapter 10

The Bacterial Phosphoenolpyruvate: Sugar Phosphotransferase System of Escherichia coli and Salmonella typhimurium

PIETER W. POSTMA

1. Introduction	357
2. The PEP: Sugar PTS: An Overview	358
3. Components of the PTS	360
3.1. Soluble Proteins	360
3.2. Membrane-Bound PTS Proteins	363
3.3. Levels of PTS Proteins	365
4. <i>In Vitro</i> Phosphorylation of Sugars by the PTS	366
5. Transport via the PTS	367
6. Role of the PTS in Chemotaxis	372
7. Genetics of the PTS	373
8. Phenotype of PTS Mutants	374
9. Regulation by the PTS	376
9.1. The <i>crr</i> Gene	377
9.2. Adenylate Cyclase	380
9.3. <i>In Vitro</i> Reconstitution of the Regulatory System	381
9.4. Regulation of Carbohydrate Uptake <i>in Vivo</i> by the PTS	387
9.5. Other Mutations That Suppress the <i>pts</i> Phenotype	387
9.6. A Model Involving Stoichiometric Interactions between PTS and Non-PTS Components	390
9.7. Growth in Batch Cultures versus Chemostat Cultures	392
9.8. Final Remarks on PTS-Mediated Regulation	393

10. Comparison with Other Regulatory Mechanisms	394
References	396

Chapter 11

Active Transport of Sugars into Escherichia coli

PETER J. F. HENDERSON

1. Introduction	409
1.1. The "Active Transport" Systems for Carbohydrates in <i>E. coli</i>	410
1.2. Lactose Transport—A Special Case	410
1.3. Primary and Secondary Transport, Symport, and Antiport ..	411
1.4. Amino Acid Transport	412
1.5. The Cell Membranes	412
2. Experimental Systems for Measuring Transport	413
2.1. Carbohydrate Transport into Intact Cells of <i>E. coli</i>	414
2.2. Variations on the Transport Theme—Equilibrium Exchange, Efflux, and Overshoot	417
2.3. Carbohydrate Transport in Subcellular Vesicles	418
2.4. Flow Dialysis	420
3. Proton-Linked Sugar Transport Systems	421
3.1. The Chemiosmotic Theory	421
3.2. Experimental Evidence for Sugar/H ⁺ Symport	422
3.3. Examples of Sugar/H ⁺ Symport in <i>E. coli</i>	426
4. Cation-Linked Melibiose Transport	430
4.1. Characterization of a Separate Melibiose/Na ⁺ Symport System Using Substrate Analogues	431
4.2. Genetics of Melibiose Transport in <i>E. coli</i>	431
4.3. Reconstitution of the Melibiose/Na ⁺ Symporter	432
4.4. Identification of the <i>melB</i> Gene Product	433
4.5. Kinetic Constants for Melibiose Transport	434
5. Binding Protein Sugar Transport Systems	434
5.1. Detection of Binding Protein-Mediated Transport	435
5.2. Energization of Binding Protein-Mediated Transport	437
5.3. Examples of Sugar Transport Systems of <i>E. coli</i> That Contain a Binding Protein	439
6. New Developments	446
References	448

Chapter 12

Convergent Pathways of Sugar Catabolism in Bacteria

RONALD A. COOPER

1. Introduction	461
2. Pathways for the Degradation of Glucose	465
2.1. Embden-Meyerhof Pathway	465
2.2. Entner-Doudoroff Pathway	466
2.3. Hexose Monophosphate Pathway	469
2.4. Pentose Phosphate Phosphoketolase Pathway	471
2.5. Hexose Phosphate-Pentose Phosphate Phosphoketolase Pathway	472
2.6. Methylglyoxal Pathway	472
3. Individual Catabolic Pathways Leading to Central Intermediates ..	474
3.1. D-Galactose	475
3.2. D-Fructose	478
3.3. D-Allose	480
3.4. Hexonic and Hexuronic Sugar Acids	480
3.5. L-Fucose, D-Arabinose, L-Rhamnose, and L-Mannose	482
3.6. Apologia	486
4. Epilogue	486
References	486
Index	492
