

CONTENTS

PART ONE BASIC METHODOLOGY 1

1. The Design and Optimization of the PCR 7
Randall K. Saiki
2. Taq DNA Polymerase 17
David Gelfand
3. PCR Automation 23
Christian Oste
4. Simple and Rapid Preparation of Samples for PCR 31
Russell Higuchi

PART TWO RESEARCH APPLICATIONS 39

5. Direct Sequencing of *In Vitro* Amplified DNA 45
Ulf Gyllenstein
6. Using PCR to Engineer DNA 61
Russell Higuchi
7. Mutation Detection by PCR, GC-Clamps, and Denaturing Gradient Gel Electrophoresis 71
Richard M. Myers, Val C. Sheffield, and David R. Cox
8. Detection of Gene Expression 89
Ernest S. Kawasaki and Alice M. Wang

9. PCR Amplification of Specific Sequences from a cDNA Library 99

J.-S. Tung, B.L. Daugherty, L. O'Neill, S.W. Law, J. Han, and G.E. Mark

10. Inverse Polymerase Chain Reaction 105

Howard Ochman, James W. Ajioka, Dan Garza, and Daniel L. Hartl

11. *Alu* PCR: The Use of Repeat Sequence Primers for Amplification of Human DNA from Complex Sources 113

David L. Nelson and C. Thomas Caskey

12. A New Approach to Constructing Genetic Maps: PCR Analysis of DNA Sequences in Individual Gametes 119

Norman Arnheim

13. Evolutionary Analysis via PCR 137

Thomas D. Kocher and Thomas J. White

PART THREE MEDICAL APPLICATIONS 149

14. Use of PCR in the Diagnosis of Monogenic Disease 153

Haig H. Kazazian, Jr.

15. Diagnosis of New Mutation Diseases Using the Polymerase Chain Reaction 171

R.A. Gibbs, J.S. Chamberlain, and C. Thomas Caskey

16. HLA Class II Gene Polymorphism: DNA Typing, Evolution, and Relationship to Disease Susceptibility 193

Henry A. Erlich and Teodorica L. Bugawan

17. Applications of PCR to the Analysis of Biological Evidence 209

Cecilia H. von Beroldingen, Edward T. Blake, Russell Higuchi, George F. Sensabaugh, and Henry A. Erlich

18. Detection of *ras* Oncogenes Using PCR 225

Johannes L. Bos

19. Application of PCR to the Detection of Human Infectious Diseases 235

Shirley Kwok and John J. Sninsky
