|--------------------------------------------------------------------|----|
| <i>Acknowledgements</i> . . . . .                                  | 1  |
| <i>Chapter 1. Introduction</i> . . . . .                           | 11 |
| 1.1. Background . . . . .                                          | 11 |
| 1.2. Some advantages . . . . .                                     | 12 |
| 1.3. Applications . . . . .                                        | 14 |
| 1.3.1. Differentiation . . . . .                                   | 14 |
| 1.3.2. Genetics . . . . .                                          | 15 |
| 1.3.3. Immunology . . . . .                                        | 16 |
| 1.3.4. Hormones . . . . .                                          | 17 |
| 1.3.5. Production of cell products . . . . .                       | 18 |
| 1.3.6. Virology and cell transformation . . . . .                  | 19 |
| 1.3.7. Cytotoxicity testing . . . . .                              | 20 |
| 1.4. Plant tissue culture . . . . .                                | 21 |
| <i>Chapter 2. Characteristics of cultured cells</i> . . . . .      | 23 |
| 2.1. Primary cells and transformation . . . . .                    | 23 |
| 2.2. Nutritional requirements . . . . .                            | 25 |
| 2.3. Growth control . . . . .                                      | 27 |
| 2.3.1. Cell cycle and growth cycle . . . . .                       | 27 |
| 2.3.2. Anchorage dependence and growth in suspension . . . . .     | 28 |
| 2.3.3. Density dependent regulation (contact inhibition) . . . . . | 29 |
| 2.3.4. The cell membrane . . . . .                                 | 31 |
| 2.4. Differentiated functions in cell cultures . . . . .           | 32 |
| 2.5. Commercial supplies and transport . . . . .                   | 33 |
| <i>Chapter 3. Culture vessels</i> . . . . .                        | 35 |
| 3.1. Design of culture vessels . . . . .                           | 35 |
| 3.1.1. Gaseous exchange . . . . .                                  | 35 |

|                                              |    |
|----------------------------------------------|----|
| 3.1.2. Sealed vessels . . . . .              | 36 |
| 3.1.3. Perfusion techniques . . . . .        | 37 |
| 3.2. Monolayer cultures . . . . .            | 37 |
| 3.2.1. Small scale cultures . . . . .        | 37 |
| 3.2.2. Intermediate scale cultures . . . . . | 39 |
| 3.2.3. Large scale cultures . . . . .        | 39 |
| 3.2.3.1. Roller vessels . . . . .            | 39 |
| 3.2.3.2. Cell factories . . . . .            | 42 |
| 3.2.3.3. Perfusion vessels . . . . .         | 43 |
| 3.2.3.4. Capillary beds . . . . .            | 43 |
| 3.3. Suspension cultures . . . . .           | 44 |
| 3.4. Microcarriers . . . . .                 | 46 |

#### *Chapter 4. Glassware preparation and sterilisation techniques* . . . . . 51

|                                           |    |
|-------------------------------------------|----|
| 4.1. General . . . . .                    | 51 |
| 4.1.1. Washing procedure . . . . .        | 52 |
| 4.1.2. Bottles and pipettes . . . . .     | 52 |
| 4.1.3. Rubber stoppers . . . . .          | 53 |
| 4.1.4. Glass washing machines . . . . .   | 53 |
| 4.2. Sterilisation methods . . . . .      | 53 |
| 4.2.1. Hot air . . . . .                  | 54 |
| 4.2.2. Autoclaving . . . . .              | 54 |
| 4.2.3. Control of sterilisation . . . . . | 55 |
| 4.2.4. Filtration . . . . .               | 56 |

#### *Chapter 5. Subculturing* . . . . . 60

|                                               |    |
|-----------------------------------------------|----|
| 5.1. Dissociation techniques . . . . .        | 60 |
| 5.1.1. Trypsin . . . . .                      | 60 |
| 5.1.2. Pronase . . . . .                      | 61 |
| 5.1.3. Collagenase . . . . .                  | 61 |
| 5.1.4. Versene (EDTA) . . . . .               | 62 |
| 5.1.5. Mechanical means . . . . .             | 62 |
| 5.2. Subculture of a cell monolayer . . . . . | 64 |
| 5.2.1. Viable cell count . . . . .            | 65 |
| 5.2.2. Bacterial check . . . . .              | 65 |
| 5.3. The growth cycle . . . . .               | 65 |

#### *Chapter 6. Primary cells* . . . . . 68

|                             |    |
|-----------------------------|----|
| 6.1. Introduction . . . . . | 68 |
| 6.2. Lymphocytes . . . . .  | 68 |

|                                                                |    |
|----------------------------------------------------------------|----|
| 6.2.1. Isolation of leukocytes and autologous plasma . . . . . | 69 |
| 6.2.2. Purification of lymphocytes . . . . .                   | 69 |
| 6.2.3. Glass-bead column method . . . . .                      | 69 |
| 6.2.4. Gradient centrifugation method . . . . .                | 70 |
| 6.2.5. Cultured lymphocytes . . . . .                          | 71 |
| 6.2.6. Separation of T and B lymphocytes . . . . .             | 73 |
| 6.3. Human skin biopsies . . . . .                             | 73 |
| 6.4. Primary kidney cells . . . . .                            | 75 |
| 6.5. Mouse macrophage cultures . . . . .                       | 77 |
| 6.6. Rat or chick skeletal muscle cells . . . . .              | 78 |
| 6.7. Mouse embryo cultures . . . . .                           | 78 |
| 6.8. Chick embryo cells . . . . .                              | 79 |
| 6.9. Chick embryo liver cells . . . . .                        | 81 |
| 6.10. Dipteran cell culture . . . . .                          | 82 |

## *Chapter 7. Cell culture media . . . . .* 84

|                                                        |    |
|--------------------------------------------------------|----|
| 7.1. Introduction . . . . .                            | 84 |
| 7.2. Balanced salt solutions . . . . .                 | 85 |
| 7.2.1. Zwitterionic buffers . . . . .                  | 87 |
| 7.3. Eagle's medium . . . . .                          | 88 |
| 7.3.1. Powdered media . . . . .                        | 90 |
| 7.4. More complicated media . . . . .                  | 91 |
| 7.5. Simple media with unspecified additives . . . . . | 91 |
| 7.6. Antibiotics . . . . .                             | 92 |
| 7.7. Serum . . . . .                                   | 92 |
| 7.7.1. Removal of small molecules from serum . . . . . | 93 |
| 7.7.2. Role of serum . . . . .                         | 95 |
| 7.8. Other natural additives . . . . .                 | 96 |
| 7.9. Media for culture of insect cells . . . . .       | 97 |

## *Chapter 8. Techniques . . . . .* 98

|                                                                             |     |
|-----------------------------------------------------------------------------|-----|
| 8.1. Cell cloning and plating efficiency . . . . .                          | 98  |
| 8.1.1. Simple methods for cloning or measuring plating efficiency . . . . . | 99  |
| 8.1.2. Capillary method . . . . .                                           | 101 |
| 8.1.3. Cloning under agar . . . . .                                         | 102 |
| 8.1.4. Cloning with a feeder layer . . . . .                                | 103 |
| 8.2. Cell counting procedures . . . . .                                     | 103 |
| 8.2.1. Haemocytometer . . . . .                                             | 104 |
| 8.2.2. Electronic cell counter . . . . .                                    | 105 |
| 8.2.3. Comparison of the methods . . . . .                                  | 107 |

|                                                         |     |
|---------------------------------------------------------|-----|
| 8.3. Storage of cells . . . . .                         | 109 |
| 8.3.1. Freezing procedure . . . . .                     | 109 |
| 8.3.2. Recovery of cells from liquid nitrogen . . . . . | 112 |
| 8.3.3. Organisation of stocks of frozen cells . . . . . | 112 |
| 8.4. Karyotyping . . . . .                              | 113 |
| 8.4.1. Chromosome preparation . . . . .                 | 114 |
| 8.4.2. Karyotyping . . . . .                            | 115 |
| 8.4.3. Q-banding . . . . .                              | 116 |
| 8.4.4. G-banding . . . . .                              | 117 |
| 8.5. Cell visualisation . . . . .                       | 118 |
| 8.5.1. Phase contrast microscopy . . . . .              | 119 |
| 8.5.2. Fluorescence microscopy . . . . .                | 119 |

## *Chapter 9. Contamination . . . . . 121*

|                                                    |     |
|----------------------------------------------------|-----|
| 9.1. Bacterial contamination . . . . .             | 121 |
| 9.1.1. Glass and plasticware . . . . .             | 121 |
| 9.1.2. Cells . . . . .                             | 121 |
| 9.1.3. Media . . . . .                             | 122 |
| 9.2. Sterility checks . . . . .                    | 122 |
| 9.3. Analysis of bacterial contamination . . . . . | 124 |
| 9.4. Airborne contamination . . . . .              | 124 |
| 9.4.1. Aseptic technique . . . . .                 | 125 |
| 9.4.2. Laminar flow systems . . . . .              | 126 |
| 9.5. Antibiotics . . . . .                         | 127 |
| 9.6. Disposal of contaminated material . . . . .   | 127 |
| 9.7. Mycoplasmas . . . . .                         | 128 |
| 9.7.1. Effect on cell cultures . . . . .           | 129 |
| 9.7.2. Culture of mycoplasmas . . . . .            | 129 |
| 9.8. Staining for mycoplasma . . . . .             | 131 |
| 9.8.1. Orcein stain . . . . .                      | 131 |
| 9.8.2. Autoradiography . . . . .                   | 131 |
| 9.8.3. Fluorescence staining . . . . .             | 132 |
| 9.9. Elimination of mycoplasmas . . . . .          | 134 |
| 9.10. Viral contamination . . . . .                | 134 |

## *Chapter 10. The cell cycle . . . . . 136*

|                                           |     |
|-------------------------------------------|-----|
| 10.1. Description . . . . .               | 136 |
| 10.2. Mitosis . . . . .                   | 137 |
| 10.3. S-phase . . . . .                   | 137 |
| 10.4. Control of the cell cycle . . . . . | 140 |

|                                                                            |     |
|----------------------------------------------------------------------------|-----|
| 10.5. Distribution of cells around the cycle . . . . .                     | 144 |
| 10.6. Growth fraction . . . . .                                            | 146 |
| 10.7. Cell cycle analysis . . . . .                                        | 147 |
| 10.7.1. Tritiated thymidine pulse method . . . . .                         | 147 |
| 10.7.2. Continuous labelling method . . . . .                              | 149 |
| 10.7.3. Accumulation functions . . . . .                                   | 150 |
| 10.7.4. Graphical analysis . . . . .                                       | 154 |
| 10.7.5. Flow microfluorometry . . . . .                                    | 155 |
| 10.8. Drugs, radiation and the cell cycle . . . . .                        | 157 |
| 10.8.1. S-phase . . . . .                                                  | 157 |
| 10.8.2. G2 phase . . . . .                                                 | 158 |
| 10.8.3. G1 phase . . . . .                                                 | 160 |
| 10.9. Thymidine kinase and computer simulation of the cell cycle . . . . . | 160 |

## *Chapter 11. Cell synchronisation . . . . . 162*

|                                                                         |     |
|-------------------------------------------------------------------------|-----|
| 11.1. Introduction . . . . .                                            | 162 |
| 11.2. Selection of mitotic cells . . . . .                              | 163 |
| 11.2.1. Shaking . . . . .                                               | 163 |
| 11.2.2. Trypsinisation . . . . .                                        | 164 |
| 11.3. Selective killing of cells in particular phases . . . . .         | 165 |
| 11.4. Selection of cells by size . . . . .                              | 166 |
| 11.4.1. Electronic cell sorting . . . . .                               | 166 |
| 11.4.2. Zone sedimentation . . . . .                                    | 166 |
| 11.5. Synchronisation by subculture . . . . .                           | 169 |
| 11.6. Serum deprivation . . . . .                                       | 171 |
| 11.7. Isoleucine starvation . . . . .                                   | 171 |
| 11.8. Blockade of S-phase . . . . .                                     | 173 |
| 11.8.1. Action of aminopterin and amethopterin (methotrexate) . . . . . | 174 |
| 11.8.2. Action of 5-fluorodeoxyuridine . . . . .                        | 176 |
| 11.8.3. Action of high concentrations of thymidine . . . . .            | 176 |
| 11.8.4. Action of hydroxyurea . . . . .                                 | 177 |
| 11.9. Procedure for inducing synchrony at the G1/S interphase . . . . . | 178 |
| 11.9.1. Isoleucine starvation and hydroxyurea . . . . .                 | 178 |
| 11.9.2. Stationary phase cells and aminopterin . . . . .                | 178 |
| 11.9.3. Double thymidine block . . . . .                                | 178 |
| 11.9.4. Comparison of the methods . . . . .                             | 179 |
| 11.10. Synchronisation in G2 . . . . .                                  | 179 |

## *Chapter 12. Use of radioactive isotopes in cell culture . . . . . 181*

|                                                      |     |
|------------------------------------------------------|-----|
| 12.1. Estimation of rates of DNA synthesis . . . . . | 181 |
| 12.1.1. Overcoming the problem . . . . .             | 186 |

|                                                                    |     |
|--------------------------------------------------------------------|-----|
| 12.1.1.1. Flooding the pool . . . . .                              | 187 |
| 12.1.1.2. Blocking the endogenous pathway . . . . .                | 188 |
| 12.1.1.3. Allowing for endogenous dTTP . . . . .                   | 189 |
| 12.1.1.4. Comparison of the methods . . . . .                      | 192 |
| 12.1.2. Application to suspension culture . . . . .                | 192 |
| 12.2. Estimation of rates of RNA and protein synthesis . . . . .   | 192 |
| 12.3. Autoradiography . . . . .                                    | 193 |
| 12.3.1. Emulsions . . . . .                                        | 194 |
| 12.3.2. Stripping film . . . . .                                   | 195 |
| 12.3.3. Liquid emulsion . . . . .                                  | 196 |
| 12.3.4. Autoradiography in dishes . . . . .                        | 198 |
| 12.3.5. The value of grain counting . . . . .                      | 198 |
| 12.3.6. Background grains . . . . .                                | 199 |
| 12.3.7. Autoradiography of water-soluble cell components . . . . . | 199 |
| 12.3.7.1. Cell fixation . . . . .                                  | 200 |
| 12.3.7.2. Covering with emulsion . . . . .                         | 201 |
| 12.4. DNA repair . . . . .                                         | 201 |
| 12.4.1. Ultraviolet irradiation . . . . .                          | 202 |
| 12.4.2. Estimation of repair synthesis . . . . .                   | 202 |

## *Chapter 13. Cell mutants and cell hybrids . . . . . 204*

|                                                                                                |     |
|------------------------------------------------------------------------------------------------|-----|
| 13.1. Auxotrophic mutants . . . . .                                                            | 204 |
| 13.2. Selection of mutants . . . . .                                                           | 205 |
| 13.2.1. Procedure for isolation of TK <sup>-</sup> mutants . . . . .                           | 208 |
| 13.3. Temperature sensitive mutants . . . . .                                                  | 209 |
| 13.4. Replica plating of animal cells . . . . .                                                | 210 |
| 13.5. Somatic cell hybridisation . . . . .                                                     | 211 |
| 13.5.1. Cell fusion with Sendai virus . . . . .                                                | 213 |
| 13.5.2. Cell fusion of BHK21/C13 cells with chick red blood cells using Sendai virus . . . . . | 214 |
| 13.5.3. Cell fusion with lyssolecithin . . . . .                                               | 215 |
| 13.5.4. Cell fusion using polyethyleneglycol . . . . .                                         | 215 |
| 13.6. Cell communication . . . . .                                                             | 216 |
| 13.6.1. Grain counting and cell communication . . . . .                                        | 217 |

## *Chapter 14. Viruses . . . . . 219*

|                                                                           |     |
|---------------------------------------------------------------------------|-----|
| 14.1. Introduction . . . . .                                              | 219 |
| 14.1.1. Animal virus classification . . . . .                             | 220 |
| 14.1.2. Precautions to be taken when using virus infected cells . . . . . | 220 |
| 14.2. Virus production . . . . .                                          | 222 |

|                                                                                         |            |
|-----------------------------------------------------------------------------------------|------------|
| 14.2.1. Procedure for production of herpes simplex, pseudorabies or EMC virus . . . . . | 223        |
| 14.2.2. Procedure for production of SV40 virus . . . . .                                | 224        |
| 14.2.3. One-step growth curve of SV40 . . . . .                                         | 225        |
| 14.2.4. Sendai virus – production and inactivation . . . . .                            | 226        |
| 14.2.4.1. Production . . . . .                                                          | 226        |
| 14.2.4.2. Inactivation by UV . . . . .                                                  | 226        |
| 14.2.4.3. Inactivation by $\beta$ -propiolactone . . . . .                              | 226        |
| 14.3. Virus detection . . . . .                                                         | 227        |
| 14.3.1. Plaque assay . . . . .                                                          | 228        |
| 14.3.1.1. Viral dilution . . . . .                                                      | 228        |
| 14.3.1.2. Suspension assay . . . . .                                                    | 228        |
| 14.3.1.3. Monolayer assay . . . . .                                                     | 229        |
| 14.3.1.4. Agar overlay assay . . . . .                                                  | 230        |
| 14.3.2. Fluorescent antibody techniques . . . . .                                       | 231        |
| 14.3.2.1. Preparation of antisera . . . . .                                             | 232        |
| 14.3.2.2. Preparation of globulin fraction . . . . .                                    | 232        |
| 14.3.2.3. Conjugation of antisera with fluorescein or rhodamine . . . . .               | 233        |
| 14.3.2.4. Staining techniques . . . . .                                                 | 233        |
| 14.3.3. Haemagglutination . . . . .                                                     | 234        |
| 14.4. Viral transformation of cells . . . . .                                           | 235        |
| 14.4.1. Methods of transformation . . . . .                                             | 236        |
| <i>Chapter 15. Differentiation in cell cultures . . . . .</i>                           | <i>237</i> |
| 15.1. Erythroid differentiation of Friend cells . . . . .                               | 237        |
| 15.1.1. Induction of globin synthesis in Friend cells . . . . .                         | 238        |
| 15.2. Skin and keratinocytes . . . . .                                                  | 239        |
| 15.3. Teratocarcinoma cells . . . . .                                                   | 240        |
| 15.4. Myeloma culture and antibody production . . . . .                                 | 242        |
| 15.5. Differentiation of muscle cells . . . . .                                         | 244        |
| 15.6. Differentiation of adipose cells . . . . .                                        | 244        |
| <i>Chapter 16. Appendices . . . . .</i>                                                 | <i>246</i> |
| 1. Media formulations . . . . .                                                         | 246        |
| 2. Stains and fixatives . . . . .                                                       | 260        |
| 3. Suppliers . . . . .                                                                  | 262        |
| 4. Sterility checks . . . . .                                                           | 264        |
| 5. Assays . . . . .                                                                     | 266        |
| 6. Abbreviations . . . . .                                                              | 268        |
| <i>References . . . . .</i>                                                             | <i>271</i> |
| <i>Subject index . . . . .</i>                                                          | <i>288</i> |
