

Table of Contents

Preface	7
Contributors.	9
Notation	11
✓ Chapter 1 Cellulose chemistry fundamentals T. P. Nevell and S. H. Zeronian	15
Chapter 2 The functions and biogenesis of native cellulose Candace H. Haigler	30
Chapter 3 Physical and theoretical methods for determining the supramolecular structure of cellulose Alfred D. French	84
Chapter 4 Chemical methods of studying supramolecular structure Stanley P. Rowland and Noelle R. Bertoniere	112
Chapter 5 Intercrystalline swelling of cellulose S. H. Zeronian	138
Chapter 6 Intracrystalline swelling of cellulose S. H. Zeronian	159
✓ Chapter 7 Solvents for cellulose D. C. Johnson	181
✓ Chapter 8 Properties and uses of cellulose solutions S. B. Ross-Murphy	202
✓ Chapter 9 Degradation of cellulose by acids, alkalis, and mechanical means T. P. Nevell	223

✓ Chapter 10	Oxidation of cellulose	
	T. P. Nevell	243
✓ Chapter 11	Thermal degradation of cellulose	
	The late Fred Shafizadeh	266
Chapter 12	Photochemistry and radiation chemistry of cellulose	
	Glyn O. Phillips and Jett C. Arthur, Jr.	290
Chapter 13	Enzymatic degradation of cellulose	
	P. Finch and J. C. Roberts.	312
Chapter 14	Cellulose esters	
	L. C. Wadsworth and D. Daponte	344
Chapter 15	Cellulose ethers	
	M. D. Nicholson and F. M. Merritt	363
Chapter 16	Cross-linking of cellulose	
	Sydney L. Vail	384
Chapter 17	Flame retardants for cellulosics materials	
	Robert H. Barker and Michael J. Drews	423
✓ Chapter 18	Formation of fibers from cellulose solutions	
	Erich E. Treiber	455
✓ Chapter 19	Mechanical properties of cellulosic textile fibers	
	J. W. S. Hearle	480
Chapter 20	Mechanical properties of wood fibers and paper	
	N. Lennart Salmén.	505
✓ Chapter 21	Degradative conversion of cellulose-containing materials into useful products	
	Raimo Alén and Eero Sjöström	531
Index		545
