List of Figures.....	xiv
List of Tables	xvi
Acknowledgments	xvii
What's all the Excitement About?	1
1. Concept and Vision	3
Hydrogen as an Energy Carrier	3
Production From Any Source	4
Hydrogen Complements Electricity	5
Taking the C Out of HCs	6
Storing Electricity From Renewable Sources	8
Handling and Producing Hydrogen	9
Power On Demand From Hydrogen Fuel Cells.....	10
Fuel cell markets	12
Fuel cell types	13
Micropower Makes Sense	14
Microgenerators	15
Receptive utilities at last?	16
Fuel Cell Cars Unveiled	17
Profiting From Your Engine	19

A Vision of an Energy Internet.....	20
References.....	22
2. Drivers and Barriers.....	23
Our planet's health.....	26
Potential effects of climate change.....	27
Evidence of global warming.....	28
Methane emissions.....	30
Government actions.....	31
Air pollution in the developing world.....	34
Efficiency as a route to pollution control.....	36
Profiting from air pollution control?.....	39
The Global Oil Picture.....	40
Oil consumption trends.....	41
How soon will we run out of oil?.....	43
Dependence on imports from the Middle East.....	46
Energy security and geopolitics.....	50
An opportunity for hydrogen.....	52
Big Business Buys In—Automaker/Oil Producer Alliances.....	52
Changes in the Electric Power Industry.....	54
Restructuring and competition.....	55
Demand for higher quality power.....	56
Meeting peak demand.....	58
Micropower's advantages to electric utilities.....	59
Government Support For Hydrogen.....	61
European Union.....	62

Japan	64
United States.....	66
U.S. state programs	69
Canada	71
Australia	71
China.....	72
Iceland	72
Norway	73
Barriers and Challenges	74
Distribution costs	74
Fuel cell technology and onboard hydrogen storage	75
Hydrogen production costs	76
Capturing carbon	77
Regulatory and institutional barriers	78
Risk of electric price increases	81
Safety	82
Outlook For a Transition to a Hydrogen Economy	82
References	85
How would Hydrogen be Used?	89
3. Fundamentals and Background	91
Our Supply of Hydrogen	91
Hydrogen's Properties	92
The Cleanest Fuel	94

Producing Hydrogen	95
Electrolysis.....	95
Reforming.....	97
Other processes	97
Fuel Cell Technology.....	98
Types of fuel cells	98
Fuel cell applications.....	103
How Hydrogen Is Used Today.....	104
Hydrogen's Early History	105
Exploiting Hydrogen's Properties.....	106
Fuel Cells Enter the Picture.....	108
Hydrogen's Renaissance(s)	110
References.....	115
4. Applications and Markets	117
A Rapidly Growing Market.....	118
Oil Companies Enter the Hydrogen Market	120
BP involved in automotive hydrogen	120
Shell's hydrogen program	121
ChevronTexaco teams with Hyundai, UTC.....	122
Automotive Fuel Cell Market.....	122
Fuel Cell Vehicle Demonstrations.....	124
Ford Focus fleet	126
Honda FCX cars.....	127
DaimlerChrysler cars, trucks, and buses.....	128

Ballard's automotive fuel cell research	131
Toyota SUV, Prius.....	131
Other fuel cell vehicles.....	133
BMW sticks with engines.....	135
Europe's CUTE Bus Program	136
Japan's Hydrogen Fuel Cell Program	137
Iceland's Ectos Project	138
California Fuel Cell Vehicle Programs	139
The California Hydrogen Highway.....	139
California Fuel Cell Partnership.....	140
SunLine bus demonstration	141
U.S. FreedomCAR Program	141
Hydrogen Fueling At Home.....	145
Honda/Plug Power.....	145
Shell/Stuart Energy	146
First hydrogen/electricity station.....	147
Utilities Involved in Hydrogen Micropower, Vehicles	147
Hydrogen Technology Park	148
Tech Town microgrid.....	148
Canada's hydrogen village.....	149
Hawaii's plans.....	149
Fuel Cell Micropower Technologies	149
United Technologies phosphoric acid power plants.....	150
Siemens/Westinghouse solid oxide fuel cells	151
FuelCell Energy stationary products.....	152

Automotive fuel cells in an industrial application.....	153
Other micropower developments.....	154
PEM Fuel Cells in Micropower Applications	155
Residential and commercial micropower.....	155
Uninterruptible power supply applications	156
Plug Power's stationary applications.....	157
Japanese developers planning small fuel cell systems.....	157
Microturbines in Stationary Applications	158
Integrating fuel cells with microturbines.....	159
Microturbines in energy systems with fuel cells.....	160
Fuel Cell Boats, Trains, and Planes	160
Locomotive being developed.....	161
The sky's the limit?	161
Portable Applications For Fuel Cells.....	162
Competing with batteries.....	163
Early market entries	164
Personal power	164
Solid oxide portable fuel cells.....	165
Fuel cell shopping online.....	166
Consumer Demand	166
References.....	168
 How would a Hydrogen Economy work?	 171
 5. Production and Supply	 173

Overview of Production Methods	174
Units of measurement.....	175
Challenges and outlook.....	176
Reforming Natural Gas and Liquids	177
Barriers and research needs.....	180
Hydrogen production economics.....	181
Carbon emissions.....	181
Vehicle emissions.....	182
Carbon Capture and Storage	183
Sequestration technologies.....	183
Government/industry programs.....	187
Environmental concerns.....	187
Producing Hydrogen From Coal	188
Coal gasification potential.....	188
Hydrogen production economics.....	190
Biomass and Waste Feedstocks	191
Carbon emissions.....	192
Hydrogen production economics.....	192
Electrolysis of Water	193
Available systems.....	194
Hydrogen production economics.....	196
Integrating electrolysis with renewables.....	197
Nuclear Power	198
Industry status.....	198
Hydrogen production economics.....	199
Technologies being developed.....	200

Hydrogen From Solar Power	201
Hydrogen production economics	202
Solar water-splitting	203
Photolytic processes	203
Photobiological processes	204
Wind-Powered Hydrogen Production	206
Norway's wind-to-hydrogen project	206
Outlook	208
Hydrogen production economics	208
Other Renewables	209
Long-Term Hydrogen Supplies	211
References	213
6. Storage and Safety	215
Hydrogen Storage Today	216
Compressed gas tanks	216
Liquefied gas tanks	217
Advanced Storage Technologies	218
Metal hydrides	219
Chemical hydrides	221
Carbon materials	223
Barriers and Challenges	224
Government/Industry Funding	225
Hydrogen Safety	228
Comparison with other fuels	228
Leak detection	230
Safety practices, codes, and standards	231

Barriers and challenges	233
The <i>Hindenburg</i> myth and other misperceptions	234
References	235
7. Transportation and Distribution	237
Problems of Hydrogen Transport	238
Road shipment	238
Hydrogen pipelines	240
Transportation economics	242
Outlook	243
Fueling Station Infrastructure	244
Infrastructure cost estimates	246
Fueling station equipment	247
Outlook	252
References	253
Appendix A. Fuel cell light duty vehicles	255
Appendix B. Fuel cell buses	265
Appendix C. Worldwide hydrogen fueling stations	271
Appendix D. Worldwide fuel cell installations	281
Appendix E. Hydrogen cost calculations	341
Appendix F. Gaseous hydrogen safety	359
Appendix G. Liquid hydrogen safety	379
Glossary and Conversion Factors	395
Bibliography	415
Index	427
