Preface xvii

Part I Layered silicates

1 Polyamide/clay nanocomposites 3
M KATO and A USUKI, Toyota Central R&D Labs Inc., Japan

1.1 Introduction 3
1.2 Nylon 6-clay hybrid (NCH) 4
1.3 Synthesis of nylon 6-clay hybrid (NCH) 4
1.4 Characterization of NCH 6
1.5 Crystal structure of NCH (Kojima, 1995) 12
1.6 Properties of NCH (Kojima, 1993a) 19
1.7 Synthesizing NCH using different types of clay (Usuki, 1995) 21
1.8 Improving the synthesis method of NCH 23
1.9 Other types of nylon 24
1.10 Conclusions 26
1.11 Future trends 27
1.12 References 27

2 Epoxy nanocomposites based on layered silicates and other nanostructured fillers 29
O BECKER and G P SIMON, Monash University, Australia

2.1 Introduction 29
2.2 Epoxy-layered silicate nanocomposites 31
2.3 Epoxy-nanocomposites based on other nanofillers 47
2.4 Ternary epoxy nanocomposite systems 48
2.5 Future trends 53
2.6 References 54

3	Biodegradable polymer/layered silicate nanocomposites	57	6	Poly(ethyl acrylate)/bentonite nanocomposites	
	S SINHA RAY and M BOUSMINA, Laval University, Canada			T TANG, X TONG, Z FENG and J. ZHANG, Chinese Academy of Sciences, People's Republic of China	
3.1	Introduction	57	6.1	Introduction	
3.2	Definition and categories of biodegradable polymers	58	6.2	Materials and characterization	
3.3	Properties and drawbacks of biodegradable polymers	59	6.3	Synthesis of PEA/bentonite nanocomposites by emulsion polymerization	
3.4	Polymer/layered silicate nanocomposite technology	59	6.4	Preparation and microstructure of PEA/bentonite nanocomposites from emulsion polymerization	
3.5	Structure and properties of layered silicates	62	6.5	Performance of PEA/bentonite nanocomposites	
3.6	Techniques used for the characterization of nanocomposites	63	6.6	Conclusions and future trends	
3.7	Biodegradable polymers and their nanocomposites	64	6.7	Acknowledgments	
3.8	Properties	86	6.8	References	
3.9	Biodegradability	101	7	Clay-acrylate nanocomposites	
3.10	Melt rheology and structure-property relationship	106		C DECKER, Université de Haute-Normandie, France	
3.11	Foam processing of biodegradable nanocomposites	115	7.1	Introduction	
3.12	Conclusions	117	7.2	Synthesis of clay-acrylate nanocomposites	
3.13	Acknowledgements	119	7.3	Properties of clay-acrylic nanocomposites	
3.14	References	119	7.4	Conclusions	
4	Polypropylene layered silicate nanocomposites	130	7.5	References	
	K JAYARAMAN and S KUMAR, Michigan State University, USA		8	Nanocomposites based on poly(methyl methacrylate) and unmodified smectite clays	
4.1	Introduction	130		K E STRAWHECKER, Veeco Inc., USA and E MANIAS, The Pennsylvania State University, USA	
4.2	Chemical compatibilization and compounding	131	8.1	Introduction	
4.3	Nanostructure	134	8.2	Dispersion of Na ⁺ montmorillonite in PMMA	
4.4	Performance	142	8.3	Crystallization behavior	
4.5	Conclusions	147	8.4	Overview of nanocomposite structure-property behavior	
4.6	Acknowledgments	147	8.5	Materials properties of poly(vinylidene fluoride)/clay nanocomposites	
4.7	References	147	8.6	Conclusions	
5	Polystyrene/clay nanocomposites	151	8.7	References	
	D-R YEI, H-K FU and F-C CHANG, National Chiao-Tung University, Taiwan		9	Poly(butylene terephthalate)/clay nanocomposites	
5.1	Introduction	151		C-S HA, Pusan National University, Korea	
5.2	Organically modified clay	152	9.1	Introduction	
5.3	Surface-initiated polymerization (SIP)	155	9.2	Impact modification of PBT by organically modified clay	
5.4	Syndiotactic polystyrene (s-PS)/clay nanocomposite	160			
5.5	Properties of nanocomposites	163			
5.6	Conclusions	169			
5.7	References	169			

layered silicate	57	6	Poly(ethyl acrylate)/bentonite nanocomposites	172
SMINA, Laval University, Canada			T TANG, X TONG, Z FENG and B HUANG, Chinese Academy of Sciences, People's Republic of China	
biodegradable polymers	57	6.1	Introduction	172
biodegradable polymers	58	6.2	Materials and characterization	174
composite technology	59	6.3	Synthesis of PEA/bentonite nanocomposites through <i>in situ</i> emulsion polymerization	175
vered silicates	62	6.4	Preparation and microstructure of casting-film of PEA/bentonite nanocomposites from emulsion	176
cterization of nanocomposites	63	6.5	Performance of PEA/bentonite nanocomposites	179
their nanocomposites	64	6.6	Conclusions and future trends	184
	86	6.7	Acknowledgments	185
property relationship	101	6.8	References	186
able nanocomposites	106

10.2	Nanocomposites and fire	257
10.3	Flame retardant mechanism	257
10.4	Nanocomposites and conventional flame retardants	265
10.5	Conclusion and future trends	267
10.6	References	268
11	Barrier properties of polymer/clay nanocomposites	273
	A SORRENTINO, G GORRASI, M TORTORA and V VITTORIA, University of Salerno, Italy	
11.1	Introduction	273
11.2	Background on polymer barrier properties	273
11.3	Experimental methods	277
11.4	Permeation and diffusion models relevant to polymer nanocomposites	279
11.5	Polymer nanocomposites diffusivity	282
11.6	Polymer nanocomposites sorption	286
11.7	Polymer nanocomposites permeability	287
11.8	Conclusions and future trends	291
11.9	References	292
12	Rubber-clay nanocomposites	297
	A MOHAMMAD and G P SIMON, Monash University, Australia	
12.1	Introduction	297
12.2	Overview of rubbers (elastomers)	297
12.3	Fillers predominantly used in the rubber industry	302
12.4	Rubber crosslinking systems	304
12.5	Types of rubber-clay nanocomposite structure	305
12.6	Comparison of properties achieved in rubber-clay nanocomposites	317
12.7	Conclusions	321
12.8	References	322

Part II Nanotubes, nanoparticles systems

13	Single-walled carbon nanotube composites
	K LIAO and Y REN, Nanyang Singapore and T XIAO, Shantou Republic of China
13.1	Introduction
13.2	Mechanical properties: elastic properties
13.3	Carbon nanotube – polymer interface
13.4	Long-term performance of unidirectional composites
13.5	Conclusions
13.6	References
14	Fullerene/carbon nanotube composites
	T KUZUMAKI, The University of Tokyo
14.1	Introduction
14.2	Fabrication of the composite
14.3	Fabrication of the composite
14.4	Application potential
14.5	Conclusions
14.6	References
15	Filled polymer nanocomposites functionalized nanoparticles
	O OK PARK, J H PARK and Institute of Science and Technology Korea Research Institute of Korea
15.1	Introduction
15.2	Organic and polymer materials
15.3	Luminescent polymer for device
15.4	Photo-oxidation of emitting polymer
15.5	Nanoparticles approaches to polymers
15.6	Conclusions and future trends
15.7	References
