ne 2: Concepts of Polymer Thermodynamics

2284

edition is produced under license between
ChemTec Publishing.

Table of Contents

	Preface	ix
1	Introduction	1
	<i>References</i>	4
2	Elements of Thermodynamics of Mixtures	5
2.1	Fundamentals	5
2.1.1	The Laws of Thermodynamics	5
2.1.2	Thermodynamic Functions and Relations	5
2.1.3	Mixtures	7
2.1.4	Composition Variables	8
2.2	Phase Equilibria	11
2.2.1	Phases	11
2.2.2	Gibbs Phase Rule	12
2.2.3	Free Energy of Mixing	13
2.2.4	Phase Stability	14
2.2.5	Phase Diagrams	18
2.2.6	Multicomponent Mixtures	21
2.2.7	Crystallizable Components	23
2.3	Ideal Mixtures	25
2.4	Regular Mixtures	31
2.4.1	Deviations from Ideality	31
2.4.2	Regular Mixtures	32
2.5	Solubility Parameters	33
2.5.1	Group Contribution Methods	35
2.5.2	Topological Contributions	39
2.6	Lattice Theories	45
2.6.1	Entropy of Mixing	46
2.6.2	Heat of Mixing	48
	<i>References</i>	48
3	Basic Thermodynamics of Polymeric Mixtures	49
3.1	Polymers	49
3.1.1	Introduction	49
3.1.2	Molecular Weight Distributions	51
3.2	Single Chain Statistics	52
3.2.1	The Ideal Chain	52
3.2.2	Real Chains	56
3.2.3	A Real Chain in a Solvent	59
3.2.4	A Real Chain in the Melt	60
3.3	Ideal Polymer Mixtures	61
3.3.1	Introduction	61
3.3.2	Ideal Polymeric Mixtures	61
3.3.3	Derivation of the Flory-Huggins Entropy of Mixing	62
3.3.4	Alternative Derivations	64

3.3.5	Huggins Correction	65
3.4	Regular Polymer Mixtures	66
3.4.1	Generalized Regular Polymer Mixtures	68
3.5	Phase Diagrams	68
3.6	The Effect of Molecular Weight Distributions	73
3.6.1	Introduction	73
3.6.2	Spinodal and Critical Point	75
3.6.2	Binodal and Flash Calculations	76
3.6.4	Example	78
	<i>References</i>	79
4	Polymer Thermodynamic Models	81
4.1	Introduction	81
4.2	Flory-Huggins Models	82
4.3	Equation-of-State Models	85
4.3.1	Key Concepts	85
4.3.1.1	Helmholtz Free Energy	86
4.3.1.2	Corresponding States	89
4.3.1.3	Cell Partition Function	90
4.3.1.4	Chain Flexibility Parameter	91
4.3.2	The Flory EoS Theory	92
4.3.3	Hole Models	97
4.3.3.1	Key Concepts	97
4.3.3.2	Holes and Huggins	100
4.4	Specific Interaction Models	101
4.4.1	Key Concepts	101
4.4.2	Interaction Strengths	107
4.4.3	Generalizations	109
4.5	The ($n=0$) Vector Model	110
4.6	Prism Theory	116
	<i>References</i>	121
5	Computer Simulations	125
5.1	Introduction	125
5.2	Computer Simulations and Statistical Mechanics	127
5.2.1	Introduction	127
5.2.2	The Boltzmann Distribution	128
5.2.3	Ensembles	130
5.3	Molecular Dynamics	133
5.4	Monte Carlo Simulations	134
5.5	Simulation of Small Systems	136
5.5.1	Periodic Boundary Conditions	137
5.6	Simulations of Polymeric Systems	138
5.6.1	Single Chain Simulations	138
5.6.2	Simulations of Many Chains	139
	<i>References</i>	142

6	Experimental Findings
6.1	Introduction
6.2	Experimental Techniques
6.2.1	Scattering Techniques
6.2.1.1	Cloud Point Methods
6.2.1.2	Spinodal Decomposition
6.2.1.3	Light Scattering
6.2.1.4	Dilute Polymer Solutions
6.2.1.5	Neutron Scattering
6.2.2	Heats of Mixing
6.2.3	Glass Transition Temperature
6.3	Experimental Results and Model Validation
6.3.1	Polymer Solutions
6.3.1.1	Polystyrene in Cyclohexane
6.3.1.2	Other Polymer Solutions
6.3.2	Polymer Blends
6.3.2.1	Polystyrene in Polyvinyl Methyl Ether
6.3.2.2	Some Typical Polymeric Mixtures
	<i>References</i>
