## Preface

ix

## 1 Introduction to Differential Equations

1

1.1	Differential Equation Models	2
1.2	The Derivative	6
1.3	Integration	10

## 2 First-Order Equations

16

2.1	Differential Equations and Solutions	16
2.2	Solutions to Separable Equations	27
2.3	Models of Motion	37
2.4	Linear Equations	47
2.5	Mixing Problems	56
2.6	Exact Differential Equations	63
2.7	Existence and Uniqueness of Solutions	77
2.8	Dependence of Solutions on Initial Conditions	88
2.9	Autonomous Equations and Stability	92
<b>Project 2.10</b> The Daredevil Skydiver		102

## 3 Modeling and Applications

104

3.1	Modeling Population Growth	105
3.2	Models and the Real World	117
3.3	Personal Finance	121
3.4	Electrical Circuits	128
<b>Project 3.5</b> The Spruce Budworm		132
<b>Project 3.6</b> Social Security, Now or Later		134

## 4 Second-Order Equations

136

4.1	Definitions and Examples	136
4.2	Second-Order Equations and Systems	146

4.3	Linear, Homogeneous Equations with Constant Coefficients	150
4.4	Harmonic Motion	156
4.5	Inhomogeneous Equations; the Method of Undetermined Coefficients	164
4.6	Variation of Parameters	173
4.7	Forced Harmonic Motion	177
<b>Project 4.8</b> Nonlinear Oscillators		187
<b>5 The Laplace Transform</b>		189
5.1	The Definition of the Laplace Transform	190
5.2	Basic Properties of the Laplace Transform	197
5.3	The Inverse Laplace Transform	203
5.4	Using the Laplace Transform to Solve Differential Equations	209
5.5	Discontinuous Forcing Terms	215
5.6	The Delta Function	227
5.7	Convolutions	233
5.8	Summary	242
<b>Project 5.9</b> Forced Harmonic Oscillators		243
<b>6 Numerical Methods</b>		245
6.1	Euler's Method	246
6.2	Runge-Kutta Methods	255
6.3	Numerical Error Comparisons	261
6.4	Practical Use of Solvers	265
<b>Project 6.5</b> Numerical Error Comparison		271
<b>7 Matrix Algebra</b>		272
7.1	Vectors and Matrices	272
7.2	Systems of Linear Equations with Two or Three Variables	283
7.3	Solving Systems of Equations	292
7.4	Homogeneous and Inhomogeneous Systems	300
7.5	Bases of a Subspace	307
7.6	Square Matrices	317
7.7	Determinants	322
<b>8 An Introduction to Systems</b>		331
8.1	Definitions and Examples	331
8.2	Geometric Interpretation of Solutions	338
8.3	Qualitative Analysis	347
8.4	Linear Systems	353
8.5	Properties of Linear Systems	362
<b>Project 8.6</b> Long-Term Behavior of Solutions		370
<b>9 Linear Systems with Constant Coefficients</b>		372
9.1	Overview of the Technique	372
9.2	Planar Systems	378
9.3	Phase Plane Portraits	392

150	9.4 The Trace-Determinant Plane	402
156	9.5 Higher-Dimensional Systems	407
164	9.6 The Exponential of a Matrix	416
173	9.7 Qualitative Analysis of Linear Systems	429
177	9.8 Higher-Order Linear Equations	433
187	9.9 Inhomogeneous Linear Systems	444
189	<b>Project 9.10</b> Phase Plane Portraits	454
189	<b>Project 9.11</b> Oscillations of Linear Molecules	454
190		
197		
203		
209		
215		
227		
233		
242		
243		
245		
246		
255		
261		
265		
271		
272		
272	10.1 The Linearization of a Nonlinear System	458
283	10.2 Long-Term Behavior of Solutions	469
292	10.3 Invariant Sets and the Use of Nullclines	475
300	10.4 Long-Term Behavior of Solutions to Planar Systems	481
307	10.5 Conserved Quantities	490
317	10.6 Nonlinear Mechanics	495
322	10.7 The Method of Lyapunov	510
322	10.8 Predator-Prey Systems	517
331	<b>Project 10.9</b> Human Immune Response to Infectious Disease	528
331	<b>Project 10.10</b> Analysis of Competing Species	530
331		
331		
338		
347		
353		
362		
370		
372		
372		
378		
392		
10 Nonlinear Systems		458
11 Series Solutions to Differential Equations		532
Appendix Complex Numbers and Matrices		595
Answers to Odd-Numbered Problems		A-1
Index		I-1
