Preface

Acknowledgements

1 Introduction

Why? 1
 How? 4
 Resistance to cold in Nature 5
 Prevention of freezing injury: cryobiology 6
 Physical-chemical basis of low temperature biochemistry 7
 References 9

2 Properties of Mixed Solvents as a Function of Temperature

Structural aspects of mixed solvents 11
 Density and viscosity 21
 Dielectric constant 27
 Acid-base equilibria and buffered solutions 45
 Solubilities 76
 Conclusion 89
 References 89

3 Solvent and Temperature Effects on Enzyme Activity

SOLVENT EFFECT 91
 Electrostatic effects on enzyme reactions 92
 Intrinsic cosolvent effect on enzyme structure and activity 117
 TEMPERATURE EFFECT 141
 Enzyme specific activity at subzero temperatures:
 Linearity and non-linearity of the Arrhenius relationship 141
 Temperature effects on quaternary structure 152
 Conclusion 158
 References 159

CONTENTS

4 Methodology for Experiments at Subzero Temperatures 161

Preparation of cooled solutions of biopolymers	161
Cooling-heating and temperature control devices	164
Fast kinetic techniques at subzero temperatures	168
References	183

5 Applications of the Low Temperature Procedure 185

Study of enzyme-substrate intermediates	185
Kinetic studies of elementary steps	227
Protein and enzyme-substrate crystallography at subzero temperatures	236
Membrane-bound multienzyme systems	262
References	274

6 General Conclusions 279

References	282
