<i>About the Author</i>	xxiii

part one

GENERAL ASPECTS

chapter one

INTRODUCTION

<i>Prologue: The Issues</i>	4
<i>Plants and Disease</i>	4
<i>The Concept of Disease in Plants</i>	5
<i>Types of Plant Diseases</i>	7
<i>History of Plant Pathology and Early Significant Plant Diseases</i>	8
<i>Introduction</i>	8
Plant Diseases as the Wrath of Gods — Theophrastus	9
Mistletoe Recognized as the First Plant Pathogen	14
Plant Diseases as the Result of Spontaneous Generation	16
Biology and Plant Pathology in Early Renaissance	16
Potato Blight — Deadly Mix of Ignorance and Politics	19

<i>The Expanding Role of Fungi as Causes of Plant Disease</i>	21
<i>The Discovery of the Other Causes of Infectious Diseases</i>	23
Nematodes — Protozoan Myxomycetes — Bacteria — Viruses, Protozoa — Mollicutes — Viroids — Serious Plant Diseases of Unknown Etiology	23
Koch's Postulates	26
Viruses, Viroids, and Prions	27
<i>Losses Caused by Plant Diseases</i>	29
<i>Plant diseases reduce the quantity and quality of plant produce.</i>	29
White, Downey, and Dry Vineyards — Bring on the Bordeaux!	30
<i>Plant diseases may limit the kinds of plants and industries in an area.</i>	32
Chestnuts, Elms, and Coconut Palm Trees — Where have they gone?	32
<i>Plant diseases may make plants poisonous to humans and animals</i>	37
Ergot, Ergotism, and LSD: a Bad Combination	37
Mycotoxins and Mycotoxicoses	39
<i>Plant diseases may cause financial losses.</i>	41
The Insect — Pathogen Connection: Multifaceted and Important	42
<i>Plant Pathology in the 20th Century</i>	45
<i>Early Developments</i>	45

The Descriptive Phase	45
The Experimental Phase	46
The Etiological Phase	46
The Search for Control of Plant Diseases	46
<i>The Main Areas of Progress</i>	47
Chemical Control of Plant Diseases	47
Appearance of Pathogen Races Resistant to Bactericides and Fungicides	48
Public Concern about Chemical Pesticides	48
Alternative Controls for Plant Diseases	49
Interest in the Mechanisms by Which Pathogens Cause Disease	50
The Concept of Genetic Inheritance of Resistance and Pathogenicity	52
Epidemiology of Plant Disease Comes of Age	53
Plant Pathology Today and Future	
Directions	54
<i>Molecular Plant Pathology</i>	54
Aspects of Applied Plant Pathology	56
Plant Biotechnology — The Promise and the Objections	56
Food Safety	58
Bioterrorism, Agroterrorism, Biological Warfare, etc. Who, What, Why	59
Worldwide Development of Plant Pathology as a Profession	60
International Centers for Agricultural Research	60
Trends in Teaching and Training	61
Plant Disease Clinics	62
The Practice and Practitioners of Plant Pathology	63
Certification of Professional Plant Pathologists	63
Plant Pathology as a Part of Plant Medicine; the Doctor of Plant Medicine Program	64
Plant Pathologists' Contribution to Crops and Society	65
<i>Some Historical and Present Examples of Losses Caused by Plant Diseases</i>	65
<i>Plant Diseases and World Crop Production</i>	65
<i>Crop Losses to Diseases, Insects and Weeds</i>	66
<i>Pesticides and Plant Diseases</i>	69
Basic Procedures in the Diagnosis of Plant Diseases	71
<i>Pathogen or Environment</i>	71
<i>Infectious Diseases</i>	72
Parasitic Higher Plants — Nematodes — Fungi and Bacteria: Fungi — Bacteria and Mollicutes	72
Viruses and Viroids — More than One Pathogen	73
<i>Noninfectious Diseases</i>	73

Identification of a Previously Unknown Disease:
Koch's Postulates 74

chapter two

PARASITISM AND DISEASE DEVELOPMENT

Parasitism and Pathogenicity	77
Host Range of Pathogens	78
Development of Disease in Plants	79
Stages in the Development of Disease:	

The Disease Cycle 80

Inoculation 80

Inoculation, Types of Inoculum, Sources of Inoculum, Landing or Arrival of Inoculum 80

Prepenetration Phenomena 82

Attachment of Pathogen to Host, Spore Germination and Perception of the Host Surface, Appressorium Formation and Maturation, Recognition between Host and Pathogen, Germination of Spores and Seeds, Hatching of Nematode Eggs 82

Penetration 87

Direct Penetration through Intact Plant Surfaces, Penetration through Wounds, Penetration through Natural Openings 87

Infection 89

Infection, Invasion, Growth and Reproduction of the Pathogen (Colonization) 89

Dissemination of the Pathogen 96

Dissemination by Air, Dissemination by Water, Dissemination by Insects, Mites, Nematodes, and Other Vectors, Dissemination by Pollen, Seed, Transplants, Budwood, and Nursery Stock, Dissemination by Humans 96

Overwintering and/or Oversummering of Pathogens 100

Relationships between Disease Cycles and Epidemics 102

chapter three

EFFECTS OF PATHOGENS ON PLANT PHYSIOLOGICAL FUNCTIONS

Effects of Pathogens on Photosynthesis	106
Effect of Pathogens on Translocation of Water and Nutrients in the Host Plant	106

<i>Interference with Upward Translocation of Water and Inorganic Nutrients</i>	106	<i>Genetics of Virulence in Pathogens and of Resistance in Host Plants</i>	139
<i>Effect on Absorption of Water by Roots</i>	108	<i>The Nature of Resistance to Disease — Pathogenicity Genes in Plant Pathogens</i>	142
<i>Effect on Translocation of Water through the Xylem</i>	108	<i>Genes Involved in Pathogenesis and Virulence by Pathogens</i>	142
<i>Effect on Transpiration</i>	108	<i>Pathogenicity Genes of Fungi controlling: Production of Infection Structures — Degradation of Cuticle and Cell Wall — Secondary Metabolites — Fungal Toxins — Pathogenicity Signaling Systems</i>	144
<i>Interference with the Translocation of Organic Nutrients through the Phloem</i>	113	<i>Pathogenicity Genes in Plant Pathogenic Bacteria controlling: Adhesion to Plant Surfaces — Secretion Systems — Enzymes that Degrade Cell Walls — Bacterial Toxins as Pathogenicity Factors — Extracellular Polysaccharides as Pathogenicity Factors — Bacterial Regulatory Systems and Networks — Sensing Plant Signaling Components — Other Bacterial Pathogenicity Factors</i>	146
<i>Effect of Pathogens on Host Plant Respiration</i>	115	<i>Pathogenicity Genes in Plant Viruses: — Functions Associated with the Coat Protein — Viral Pathogenicity Genes</i>	149
Respiration of Diseased Plants	117	<i>Nematode Pathogenicity Genes</i>	150
<i>Effect of Pathogens on Permeability of Cell Membranes</i>	118	<i>Genetics of Resistance through the Hypersensitive Response</i>	151
<i>Effects of Pathogens on Transcription and Translation</i>	118	<i>Pathogen-Derived Elicitors of Defense Responses in Plants</i>	151
Effect on Transcription	119	<i>Avirulence (avr) Genes: One of the Elicitors of Plant Defense Responses Characteristics of <i>avr</i> Gene-Coded Proteins: — Their Structure and Function Role of <i>avr</i> Genes in Pathogenicity and Virulence</i>	154
Effect on Translation	119	<i><i>hrp</i> Genes and the Type III Secretion System</i>	155
<i>Effect of Pathogens on Plant Growth</i>	119	<i>Resistance (R) Genes of Plants: Examples of R Genes — How Do R Genes Confer Resistance? — Evolution of R Genes — Other Plant Genes for Resistance to Disease</i>	155
<i>Effect of Pathogens on Plant Reproduction</i>	121	<i>Signal Transduction between Pathogenicity Genes and Resistance Genes: — Signaling and Regulation of Programmed Cell Death — Genes and Signaling in Systemic Acquired Resistance</i>	160

chapter four

GENETICS OF PLANT DISEASE

Introduction 125

Genes and Disease — Variability in Organisms — Mechanisms of Variability 126

General Mechanisms: Mutation — Recombination — Gene and Genotype Flow among Plant Pathogens — Population Genetics, Genetic Drift, and Selection — Life Cycles — Reproduction — Mating Systems — Out-crossing — Pathogen Fitness 129

Specialized Mechanisms of Variability in Pathogens: Sexual-like Processes in Fungi Heterokaryosis — Parasexuality — Vegetative Incompatibility — Heteroploidy 131

Sexual-like Processes in Bacteria and Horizontal Gene Transfer 132

Genetic Recombination in Viruses 133

Loss of Pathogen Virulence in Culture 133

Stages of Variation in Pathogens 134

Types of Plant Resistance to Pathogens 134

True Resistance: Partial, Quantitative, Polygenic, or Horizontal Resistance — R-Gene Resistance, Monogenic, or Vertical Resistance 136

Disease Escape — Tolerance to Disease 137

<i>Genetics of Virulence in Pathogens and of Resistance in Host Plants</i>	139	<i>Examples of Molecular Genetics of Selected Plant Diseases: — The Powdery Mildew Disease — Magnaporthe grisea, the Cause of Rice Blast —</i>	160
<i>The Nature of Resistance to Disease — Pathogenicity Genes in Plant Pathogens</i>	142		
<i>Genes Involved in Pathogenesis and Virulence by Pathogens</i>	142		
<i>Pathogenicity Genes of Fungi controlling: Production of Infection Structures — Degradation of Cuticle and Cell Wall — Secondary Metabolites — Fungal Toxins — Pathogenicity Signaling Systems</i>	144		
<i>Pathogenicity Genes in Plant Pathogenic Bacteria controlling: Adhesion to Plant Surfaces — Secretion Systems — Enzymes that Degrade Cell Walls — Bacterial Toxins as Pathogenicity Factors — Extracellular Polysaccharides as Pathogenicity Factors — Bacterial Regulatory Systems and Networks — Sensing Plant Signaling Components — Other Bacterial Pathogenicity Factors</i>	146		
<i>Pathogenicity Genes in Plant Viruses: — Functions Associated with the Coat Protein — Viral Pathogenicity Genes</i>	149		
<i>Nematode Pathogenicity Genes</i>	150		
<i>Genetics of Resistance through the Hypersensitive Response</i>	151		
<i>Pathogen-Derived Elicitors of Defense Responses in Plants</i>	151		
<i>Avirulence (avr) Genes: One of the Elicitors of Plant Defense Responses Characteristics of <i>avr</i> Gene-Coded Proteins: — Their Structure and Function Role of <i>avr</i> Genes in Pathogenicity and Virulence</i>	154		
<i><i>hrp</i> Genes and the Type III Secretion System</i>	155		
<i>Resistance (R) Genes of Plants: Examples of R Genes — How Do R Genes Confer Resistance? — Evolution of R Genes — Other Plant Genes for Resistance to Disease</i>	155		
<i>Signal Transduction between Pathogenicity Genes and Resistance Genes: — Signaling and Regulation of Programmed Cell Death — Genes and Signaling in Systemic Acquired Resistance</i>	160		

<i>Fusarium, the Soilborne Plant Pathogen —</i>	
<i>Ustilago maydis and Corn Smut</i>	161
Breeding of Resistant Varieties	165
Natural Variability in Plants — Breeding and	
Variability in Plants — Breeding for Disease	
Resistance Sources of Genes for Resistance —	
Techniques Used in Classical Breeding for	
Resistance — Seed, Pedigree, and Recurrent	
Selection — Tissue Culture and Genetic	
Engineering Techniques	165
<i>Genetic Transformation of Plant Cells for Disease</i>	
<i>Resistance</i>	169
<i>Advantages and Problems in Breeding for Vertical</i>	
<i>or Horizontal Resistance</i>	169
<i>Vulnerability of Genetically Uniform Crops to Plant</i>	
<i>Disease Epidemics</i>	170

chapter five

HOW PATHOGENS ATTACK PLANTS

Mechanical Forces Exerted By Pathogens on	
Host Tissues	177
Chemical Weapons of Pathogens	179

<i>Enzymes in Plant Disease</i>	180
Enzymatic Degradation of Cell Wall Substances	180
Cuticular Wax — Cutin — Pectic Substances — Cellulose	
— Cross-Linking Glycans (Hemicelluloses) — Suberin	
— Lignin — Cell Wall Flavonoids — Cell Wall	
Structural Proteins	180
Enzymatic Degradation of Substances Contained in Plant	
Cells	189
Proteins — Starch — Lipids	189

<i>Microbial Toxins in Plant Disease</i>	190
Toxins That Affect a Wide Range of Host Plants	190
Tabtoxin — Phaseolotoxin — Tentoxin — Cercosporin	
— Other Non-Host-Specific Toxins	191
Host-Specific or Host-Selective Toxins	193
Victorin, HV Toxin — T-Toxin [Cochliobolus	
(<i>Helminthosporium</i>) heterostrophus Race T-Toxin] —	
C-Toxin — <i>Alternaria alternata</i> Toxins — Other	
Host-Specific Toxins	194

<i>Growth Regulators in Plant Disease</i>	196
<i>Detoxification of Low-Molecular Weight</i>	
<i>Antimicrobial Molecules</i>	201
<i>Promotion of Bacterial Virulence By avr</i>	
<i>Genes</i>	202

<i>Role of Type III Secretion in Bacterial Pathogenesis</i>	
202	
<i>Pathogenicity and Virulence Factors in Viruses and</i>	
<i>Viroids</i>	202

chapter six

HOW PLANTS DEFEND THEMSELVES AGAINST PATHOGENS

Whatever the Plant Defense or Resistance, It Is	
Controlled by Its Genes	208
<i>Non-host Resistance — Partial, Polygenic,</i>	
<i>Quantitative, or Horizontal Resistance —</i>	
<i>Monogenic, R Gene, or Vertical</i>	
<i>Resistance</i>	208

Preexisting Structural and Chemical	
Defenses	210

<i>Preexisting Defense Structures</i>	210
---------------------------------------	-----

<i>Preexisting Chemical Defenses</i>	211
--------------------------------------	-----

Inhibitors Released by the Plant in Its Environment —	
Inhibitors Present in Plant Cells before Infection	211

Defense through Lack of Essential	
Factors	212

<i>Lack of Recognition between Host and Pathogen:</i>	
<i>Lack of Host Receptors and Sensitive Sites for</i>	
<i>Toxins — Lack of Essential Substances for the</i>	
<i>Pathogen</i>	212

Induced Structural and Biochemical	
Defenses	213

Recognition of the Pathogen by the Host Plant	213
Transmission of the Alarm Signal to Host Defense	
Providers: Signal Transduction	214

Induced Structural Defenses: Cytoplasmic	
Defense Reaction — Cell Wall Defense	
Structures	214

<i>Histological Defense Structures: Formation of Cork</i>	
<i>Layers — Abscission Layers — Tyloses —</i>	
<i>Deposition of Gums</i>	215

<i>Necrotic Structural Defense Reaction:</i>	
<i>Defense through the Hypersensitive</i>	
<i>Response</i>	217

Induced Biochemical Defenses in: Non-Host	
Resistance — In Partial, Quantitative	

(Polygenic, General, or Horizontal)	Treatment with Chemicals	237
<i>Resistance: Function of Gene Products in Quantitative Resistance — The Mechanisms of Quantitative Resistance — Effect of Temperature on Quantitative Resistance</i>	Defense through Genetically Engineering	
217	Disease-Resistant Plants	242
Induced Biochemical Defenses in the Hypersensitive Response (R Gene) Resistance	With Plant-Derived Genes — With Pathogen-Derived Genes	242
221	Defense through RNA Silencing by Pathogen-Derived Genes	242
<i>The Hypersensitive Response: Genes Induced During Early Infection — Functional Analysis of Plant Defense Genes — Classes of R Gene Proteins — Recognition of Avr Proteins of Pathogens by the Host Plant — How Do R and Avr Gene Products Activate Plant Responses? — Some Examples of Plant Defense through R Genes and Their Matching Avr Genes: — The Rice Pi-ta Gene. The Tomato Cf Genes. The Tomato Bs2 Gene. The Arabidopsis RPM1 Gene — The Co-function of Two or More Genes.</i>	chapter seven	
221	ENVIRONMENTAL EFFECTS ON THE DEVELOPMENT OF INFECTIOUS PLANT DISEASE	
<i>Defense Involving Bacterial Type III Effector Proteins</i>	Introduction	251
229	Effect of Temperature	253
<i>Production of Active Oxygen Species, Lipoxygenases, and Disruption of Cell Membranes — Reinforcement of Host Cell Walls with Strengthening Molecules</i>	Effect of Moisture	257
231	Effect of Wind	257
<i>Production of Antimicrobial Substances in Attacked Host Cells — Pathogenesis-Related (PR) Proteins</i>	Effect of Light	257
232	Effect of Soil pH and Soil Structure	257
<i>Defense through Production of Secondary Metabolites — Phenolics: — Simple Phenolic Compounds — Toxic Phenolics from Nontoxic Phenolic Glycosides — Role of Phenol-Oxidizing Enzymes in Disease Resistance — Phytoalexins</i>	Effect of Host-Plant Nutrition	257
233	Effect of Herbicides	262
<i>Detoxification of Pathogen Toxins by Plants — Immunization of Plants against Pathogens: Defense through Plantibodies</i>	Effect of Air Pollutants	262
236		
<i>Resistance through prior Exposure to Mutants of Reduced Pathogenicity</i>		
237		
<i>Systemic Acquired Resistance: — Induction by Artificial Inoculation with Microbes or by</i>	chapter eight	
	PLANT DISEASE EPIDEMIOLOGY	
	The Elements of an Epidemic	266
	Host Factors That Affect the Development of Epidemics	267
	Levels of Genetic Resistance or Susceptibility of the Host — Degree of Genetic Uniformity of Host Plants — Type of Crop — Age of Host Plants	267
	Pathogen Factors That Affect Development of Epidemics	269
	Levels of Virulence — Quantity of Inoculum Near Hosts — Type of Reproduction of the Pathogen — Ecology of the Pathogen — Mode of Spread of the Pathogen	269
	Environmental Factors That Affect Development of Epidemics	271

<i>Moisture—Temperature</i>	271	<i>Coatings</i>	295
Effect of Human Cultural Practices and Control Measures	272	Control Methods that Eradicate or Reduce Pathogen Inoculum	298
<i>Site Selection and Preparation—Selection of Propagative Material—Cultural Practices—Disease Control Measures—Introduction of New Pathogens</i>	272	<i>Cultural Methods that Eradicate or Reduce the Inoculum:—Host Eradication—Crop Rotation—Sanitation—Creating Conditions Unfavorable to the Pathogen—Polyethylene Traps and Mulches</i>	300
Measurement of Plant Disease and of Yield Loss	273	<i>Biological Methods that Eradicate or Reduce the Inoculum:—Suppressive Soils</i>	303
Patterns of Epidemics—Comparison of Epidemics—Development of Epidemics—Modeling of Plant Disease Epidemics—Computer Simulation of Epidemics	274	Reducing Amount of Pathogen Inoculum through Antagonistic Microorganisms	305
Forecasting Plant Disease Epidemics	281	<i>Soilborne Pathogens—Aerial Pathogens—Mechanisms of Action—Control through Trap Plants—Control through Antagonistic Plants</i>	305
<i>Evaluation of Epidemic Thresholds—Evaluation of Economic Damage Threshold—Assessment of Initial Inoculum and of Disease—Monitoring Weather Factors That Affect Disease Development</i>	281	Physical Methods that Eradicate or Reduce the Inoculum	310
New Tools in Epidemiology	283	<i>Control by Heat Treatment—Soil Sterilization by Heat—Soil Solarization—Hot-Water Treatment of Propagative Organs—Hot-Air Treatment of Storage Organs—Control by Eliminating Certain Light Wavelengths—Drying Stored Grains and Fruit—Disease Control by Radiation—Trench Barriers against Root-transmitted Tree Diseases</i>	310
<i>Molecular Tools. GIS. Remote Sensing. Image Analysis. Information Technology</i>	283	Chemical Methods that Eradicate or Reduce the Inoculum	312
Examples of Plant Disease Forecast Systems	285	<i>Soil Treatment with Chemicals—Fumigation—Disinfestation of Warehouses—Control of Insect Vectors</i>	312
<i>Forecasts Based on Amount of Initial Inoculum—On Weather Conditions Favoring Development of Secondary Inoculum—On Amounts of Initial and Secondary Inoculum</i>	285	Cross Protection—Induced Resistance: Systemic Acquired Resistance	314
Disease-Warning Systems—Development and Use of Expert Systems in Plant Pathology—Decision Support Systems	289	<i>—Plant Defense Activators—Improving the Growing Conditions of Plants—Use of Resistant Varieties</i>	314
chapter nine			
CONTROL OF PLANT DISEASES			
Control Methods that Exclude the Pathogen from the Host	295	Control through Use of Transgenic Plants	
<i>Quarantines and Inspections—Crop Certification—Evasion or Avoidance of Pathogen—Use of Pathogen-Free Propagating Material—Pathogen-Free Seed—Pathogen-Free Vegetative Propagating Materials—Exclusion of Pathogens from Plant Surfaces by Epidermal</i>		<i>Transformed for Disease Resistance—Transgenic Plants that Tolerate Abiotic Stresses—Transgenic Plants Transformed with: Specific Plant Genes for Resistance—with Genes Coding for Antipathogen Compounds—with Nucleic Acids that Lead to Resistance and to Pathogen Gene Silencing—with Combinations of Resistance Genes—Producing Antibodies against the Pathogen—Transgenic Biocontrol Microorganisms</i>	319

Direct Protection of Plants from
Pathogens 322

By Biological Controls: — Fungal Antagonists:

Heterobasidion (Fomes) annosum by Phleviopsis
(Peniophora) gigantea — *Chestnut Blight with*
Hypovirulent Strains of the Pathogen — Soilborne
Diseases — Diseases of Aerial Plant Parts with
Fungi. — Postharvest Diseases Bacterial
Antagonists: Soilborne Diseases — Diseases of
Aerial Plant Parts with Bacteria — Postharvest
Diseases — with Bacteria of Bacteria-Mediated
Frost Injury 328

Viral Parasites of Plant Pathogens 328

Biological Control of Weeds 328

Direct Protection by Chemicals 329

Methods of Application of Chemicals for Plant
Disease Control — Foliage Sprays and Dusts —
Seed Treatment — Soil Treatment — Treatment
of Tree Wounds — Control of Postharvest
Diseases 332

Types of Chemicals Used for Plant Disease
Control 338

Inorganic — Inorganic Sulfur Compounds — Carbonate
Compounds — Phosphate and Phosphonate Compounds
— Film-Forming Compounds 338

Organic Chemicals: Contact Protective Fungicides —
Organic Sulfur Compounds: Ditihiocarbamates 339
Systemic Fungicides: — Heterocyclic Compounds —
Acylalanines — Benzimidazoles — Oxanthiins —
Organophosphate Fungicides — Pyrimidines —
Trizoles — Strobilurins or QoI Fungicides —
Miscellaneous Systemics 340

Miscellaneous Organic Fungicides — Antibiotics —
Petroleum Oils and Plant Oils — Electrolyzed Oxidizing
Water — Growth Regulators — Nematicides: —
Hologenated Hydrocarbons — Organophosphate
Nematicides — Isothiocyanates — Carbamates —
Miscellaneous Nematicides 343

Mechanisms of Action of Chemicals Used to
Control Plant Diseases — Resistance of Pathogens
to Chemicals — Restrictions on Chemical Control
of Plant Diseases 345

Integrated Control of Plant Diseases: — In a
Perennial Crop — In an Annual Crop 348

part two

SPECIFIC PLANT DISEASES

chapter ten

ENVIRONMENTAL FACTORS THAT CAUSE PLANT DISEASES

Introduction: General Characteristics —
Diagnosis — Control 358

Temperature Effects: High-Temperature Effects —
— Low-Temperature Effects —
Low- Temperature Effects on Indoor
Plants 358

Moisture Effects: Low Soil Moisture Effects —
Low Relative Humidity — High Soil
Moisture Effects 365

Inadequate Oxygen 367

Light 368

Air Pollution 368

Air Pollutants and Kinds of Injury to Plants —
Main Sources of Air Pollutants — How Air
Pollutants Affect Plants — Acid Rain 000

Nutritional Deficiencies in Plants 372

Soil Minerals Toxic to Plants 372

Herbicide Injury 378

Other Improper Agricultural Practices 381

The Often Confused Etiology of Stress
Diseases 383

chapter eleven

PLANT DISEASES CAUSED BY FUNGI

Introduction 383

Some Interesting Facts about

Fungi (Box) 387

Characteristics of plant pathogenic
fungi 388

Morphology — Reproduction — Ecology —
Dissemination 388

Classification of Plant Pathogenic
Fungi 390

<i>Fungallike Organisms — The True Fungi</i>	391	Cochliobolus Diseases of Wheat, Barley, and Other Grasses	469
Identification: Symptoms Caused by Fungi on Plants	397	Crown Rot and Common Root Rot — Spot Blotch of Barley and Wheat	469
Isolation of fungi (and Bacteria)	398	Pyrenophora Diseases of Wheat, Barley and Oats	469
<i>Preparing for Isolation — Isolating the Pathogen</i>	398	Net Blotch of Barley — Barley Stripe — Tan Spot of Wheat	469
Life Cycles of Fungi	402	<i>Stem and Twig Cankers Caused by Ascomycetes and Deuteromycetes (Mitosporic Fungi)</i>	473
Control of Fungal Diseases of Plants	403	Black Knot of Plum and Cherry — Chestnut Blight — Nectria Canker — Leucostoma Canker	476
Diseases Caused by Fungallike Organisms	404	Cankers of Forest Trees: — Hypoxylon Canker — Pitch Canker — Butternut Canker — Phomopsis Blight — Seiridium Canker	481
Diseases Caused by Myxomycota (Myxomycetes)	404	<i>Anthracnose Diseases Caused by Ascomycetes and Deuteromycetes (Mitosporic Fungi)</i>	483
Diseases Caused by Plasmodiophoromycetes	405	Black Spot of Rose	485
<i>Clubroot of Crucifers</i>	407	Elsinoe Anthracnose and Scab Diseases: — Grape Anthracnose or Bird's-eye Rot — Raspberry Anthracnose — Citrus Scab Diseases — Avocado Scab	486
Diseases Caused by Oomycetes	409	Colletotrichum Diseases: Colletotrichum Anthracnose Diseases of Annual Plants	487
<i>Pythium Seed Rot, Damping-off, Root Rot, and Soft Rot</i>	410	Anthracnose of Beans — Anthracnose of Cucurbits — Anthracnose or Ripe Rot of Tomato — Onion Anthracnose or Smudge — Strawberry Anthracnose — Anthracnose of Cereals and Grasses	490
<i>Phytophthora Diseases</i>	414	Colletotrichum Anthracnoses: A Menace To Tropical Crops (Box) Colletotrichum	491
<i>Phytophthora Root and Stem Rots — Phytophthoras Declare War on Cultivated Plants and on Native Tree Species (Box)</i>	414	Bitter Rot of Apple — Ripe Rot of Grape	494
<i>Late Blight of Potatoes</i>	421	<i>Gnomonia Anthracnose and Leaf Spot Diseases</i>	498
<i>The Downy Mildews</i>	427	Dogwood Anthracnose	501
<i>Introduction — Downy Mildew of Grape</i>	428	<i>Fruit and General Diseases Caused by Ascomycetes and Deuteromycetes (Mitosporic Fungi)</i>	501
Diseases Caused by True Fungi	433	Ergot of Cereals and Grasses — Apple Scab — Brown Rot of Stone Fruits — Moniliophthora Pod Rot of Cacao — Botrytis Diseases — Black Rot of Grape — Cucurbit Gummy Stem Blight and Black Rot — Diaporthe, Phomopsis, and Phoma Diseases — Stem Canker of Soybeans — Melanose Disease of Citrus — Phomopsis Diseases — Black Rot of Apple	501
Diseases Caused by Chytridiomycetes	433		
Diseases Caused by Zygomycetes	434		
Diseases Caused by Ascomycetes and Mitosporic Fungi	439		
<i>Sooty molds — Taphrina leaf Curl Diseases — Powdery Mildews</i>	440		
<i>Foliar Diseases Caused by Ascomycetes and Deuteromycetes (Mitosporic Fungi)</i>	452		
<i>Alternaria Diseases — Cladosporium Diseases — Needle Casts and Blights of Conifers</i>	452		
<i>Mycosphaerella Diseases: Banana Leaf Spot or Sigatoka Disease</i>	458		
<i>Septoria Diseases — Cercospora Diseases — Rice Blast Disease</i>	460		
<i>Cochliobolus, Pyrenophora and Setosphaeria Diseases of Cereals and Grasses</i>	466		
<i>Diseases of Corn: — Southern Corn Leaf Blight — Northern Corn Leaf Blight — Northern Corn Leaf Spot</i>	466		
<i>Diseases of Rice — Brown Spot Disease of Rice</i>	468		

Vascular Wilts Caused by Ascomycetes and Deuteromycetes (Mitosporic Fungi)	522	The Rusts	562
<i>Fusarium</i> Wilts: Of Tomato — <i>Fusarium</i> or <i>Panama</i> Wilt of Banana	523	<i>Cereal Rusts</i> — Stem Rust of Wheat and Other Cereals	565
<i>Verticillium</i> Wilts	526	<i>Rusts of Legumes</i> — Bean Rust — Soybean Rust — A Major Threat to a Major Crop (Box)	571
<i>Ophiostoma</i> Wilt of Elm Trees: Dutch Elm Disease	528	<i>Cedar-Apple Rust</i> — Coffee Rust	574
<i>Ceratocystis</i> Wilts — Oak wilt — <i>Ceratocystis</i> Wilt of Eucalyptus	532	<i>Rusts of Forest Trees</i> : — White Pine Blister Rust — Fusiform Rust	577
Root and Stem Rots Caused by Ascomycetes and Deuteromycetes (Mitosporic Fungi)	534	The Smuts	582
<i>Gibberella</i> Diseases — <i>Gibberella</i> Stalk and Ear Rot, and Seedling Blight of Corn	535	<i>Corn Smut</i> — Loose Smut of Cereals — Covered Smut, or Bunt, of Wheat	588
<i>Fusarium</i> (<i>Gibberella</i>) Head Blight (FHB) or Scab of Small Grains	535	<i>Karnal Bunt</i> of Small Grains — Legitimate Concerns and Political Predicaments (Box)	592
<i>Fusarium</i> Root and Stem Rots of Non-Grain Crops	538	Root and Stem Rots Caused by Basidiomycetes	593
Take-All of Wheat — <i>Thielavopsis</i> Black Root Rot — <i>Monosporascus</i> Root Rot and Vine Decline of Melons	540	<i>Root and Stem Rot Diseases Caused by the "Sterile Fungi"</i> Rhizoctonia and Sclerotium	593
<i>Sclerotinia</i> Diseases: <i>Sclerotinia</i> Diseases of Vegetables and Flowers — <i>Phymatotrichum</i> Root Rot	546	Rhizoctonia Diseases — Sclerotium Diseases	594
Postharvest Diseases of Plant Products Caused by Ascomycetes and Deuteromycetes	553	Root Rots of Trees	602
Postharvest Decays of Fruits and Vegetables	556	Armillaria Root Rot of Fruit and Forest Trees	602
Aspergillus, Penicillium, Rhizopus, and Mucor — Alternaria — Botrytis — <i>Fusarium</i> — Geotrichum — Penicillium — <i>Sclerotinia</i>	556	Wood Rots and Decays Caused by Basidiomycetes	604
Control of Postharvest Decays of Fresh Fruits and Vegetables	557	Witches' Broom of Cacao	611
Postharvest Decays of Grain and Legume Seeds	558		
Mycotoxins and Mycotoxicoses	559		
Aspergillus Toxins — Aflatoxins	559		
<i>Fusarium</i> Toxins — Other Aspergillus Toxins and Penicillium Toxins	559		
Control of Postharvest Grain Decays	560		
Diseases Caused by Basidiomycetes	562		
The Rusts — The Smuts — Root and Stem Rots — Wood Rots and Decays — Witches' Broom	562		

chapter twelve

PLANT DISEASES CAUSED BY PROKARYOTES: BACTERIA AND MOLLIUTES	
Introduction	616
Plant Diseases Caused by Bacteria	618
<i>Characteristics of Plant Pathogenic Bacteria</i>	618
Morphology — Reproduction — Ecology and Spread — Identification of Bacteria — Symptoms Caused by Bacteria — Control of Bacterial Diseases of Plants	618
Bacterial Spots and Blights	627
<i>Introduction</i> — Wildfire of Tobacco — Bacterial Blights of Bean — Angular Leaf Spot of Cucumber — Angular Leaf Spot or Bacterial Blight of Cotton — Bacterial Leaf Spots and Blights of Cereals and Grasses — Bacterial Spot of Tomato and Pepper — Bacterial Speck of	

<i>Tomato — Bacterial Fruit Blotch of Watermelon</i>	
— <i>Cassava Bacterial Blight — Bacterial Spot of</i>	
<i>Stone Fruits</i>	627
Bacterial Vascular Wilts	638
<i>Bacterial Wilt of Cucurbits — Fire Blight of Pear</i>	
<i>and Apple — Southern Bacterial Wilt of</i>	
<i>Solanaceous Plants — Bacterial Wilt or Moko</i>	
<i>Disease of Banana — Ring Rot of Potato</i>	639
<i>Bacterial Canker and Wilt of Tomato — Bacterial</i>	
<i>Wilt (Black Rot) of Crucifers — Stewart's Wilt of</i>	
<i>Corn</i>	651
Bacterial Soft Rots	656
<i>Bacterial Soft Rots of Vegetables</i>	656
<i>The Incalculable Postharvest Losses from Bacterial</i>	
<i>(and Fungal) Soft Rots (Box)</i>	660
Bacterial Galls	662
<i>Crown Gall</i>	662
<i>The Crown Gall Bacterium — The Natural Genetic</i>	
<i>Engineer (Box)</i>	664
Bacterial Cankers	667
<i>Bacterial Canker and Gummosis of Stone Fruit</i>	
<i>Trees — Citrus Canker</i>	667
Bacterial Scabs	674
<i>Common Scab of Potato</i>	667
Root Nodules of Legumes	675
Xylem-Inhabiting Fastidious Bacteria	678
<i>Pierce's Disease of Grape — Citrus</i>	
<i>Variegated Chlorosis — Ratoon Stunting of</i>	
<i>Sugarcane</i>	679
Phloem-Inhabiting Fastidious Bacteria	683
<i>Yellow Vine Disease of Cucurbits — Citrus</i>	
<i>Greening Disease — Papaya Bunchy Top</i>	
<i>Disease</i>	684
Plant Diseases Caused By Mollicutes:	
Phytoplasmas and Spiroplasmas	687
<i>Properties of True Mycoplasmas — Phytoplasmas —</i>	
<i>Spiroplasmas</i>	688
Examples of Plant Diseases Caused by	
Mollicutes	691
<i>Aster Yellows — Lethal Yellowing of Coconut</i>	
<i>Palms — Apple Proliferation — European Stone</i>	
<i>Fruit Yellows — Ash Yellows — Elm Yellows</i>	
<i>(Phloem Necrosis) — Peach X-Disease — Pear</i>	
<i>Decline</i>	691
Spiroplasma Diseases	699
<i>Citrus Stubborn Disease — Corn Stunt</i>	
<i>Disease</i>	691
chapter thirteen	
PLANT DISEASES CAUSED BY	
PARASITIC HIGHER PLANTS, INVASIVE	
CLIMBING PLANTS, AND PARASITIC	
GREEN ALGAE	
Introduction — Parasitic Higher Plants	705
<i>Dodder — Witchweed — Broomrapes — Dwarf</i>	
<i>Mistletoes of Conifers — True or Leafy</i>	
<i>Mistletoes</i>	706
Invasive Climbing Plants	716
<i>Old World Climbing Fern — Kudzu Vine</i>	717
Parasitic Green Algae: Cephaleuros	719
Plant Diseases Caused by Algae	719
chapter fourteen	
PLANT DISEASES CAUSED BY VIRUSES	
Introduction	724
Characteristics of Plant Viruses	724
<i>Detection — Morphology — Composition and</i>	
<i>Structure: Of Viral Protein — Of Viral Nucleic</i>	
<i>Acid</i>	725
<i>Satellite Viruses and Satellite RNAs</i>	731
The Biological Function of Viral Components:	
<i>Coding</i>	731
Virus Infection and Virus Synthesis	731
Translocation and Distribution of Viruses in	
Plants	733
Symptoms Caused by Plant Viruses	734
Physiology of Virus-Infected Plants	737
Transmission of Plant Viruses By: Vegetative	
<i>Propagation — Sap — Seed — Pollen —</i>	
<i>Insects — Mites — Nematodes — Fungi —</i>	
<i>Dodder</i>	737
Epidemiology of Plant Viruses and	
Viroids	743

Purification of Plant Viruses — Serology of Plant Viruses	743	<i>Tombusviridae</i>	779
Nomenclature and Classification of Plant Viruses	747	Diseases Caused by Luteoviridae	781
Detection and Identification of Plant Viruses	751	<i>Barley Yellow Dwarf — Potato Leafroll — Beet Western Yellows</i>	781
Economic Importance of Plant Viruses	752	Diseases Caused by Monopartite Isometric (+)ssRNA Viruses of Genera Not Yet Assigned to Families	783
Control of Plant Viruses	753	Diseases Caused by Comoviridae	784
Diseases Caused by Rigid Rod-Shaped Viruses	757	<i>Diseases Caused by Comoviruses</i>	784
<i>Diseases Caused by Tobamoviruses: — Tobacco Mosaic</i>	757	<i>Diseases Caused by Nepoviruses</i>	784
<i>The Contribution of Tobacco Mosaic Virus to Biology and Medicine (Box)</i>	757	Tomato Ring Spot — Grapevine Fanleaf — Raspberry Ring Spot	785
<i>Diseases Caused by Tobraviruses: — Tobacco Rattle by Furoviruses — by Hordeiviruses — by Pecluviruses — by Pomoviruses — by Benyviruses</i>	758	Diseases Caused by Bromoviridae	787
Diseases Caused by Filamentous Viruses	762	Diseases Caused by Cucumoviruses	787
<i>Diseases Caused by Potexviruses — by Carlaviruses — by Capilloviruses and Trichoviruses — by Allexiviruses, Foveaviruses, and Vitiviruses</i>	762	<i>Cucumber Mosaic</i>	788
Diseases Caused by Potyviridae	764	Diseases Caused by Ilarviruses: <i>Prunus Necrotic Ring Spot</i>	790
<i>Diseases Caused by Potyviruses</i>	764	Diseases Caused by Isometric Double-Stranded RNA Viruses	792
Bean Common Mosaic and Bean Yellow Mosaic — Lettuce Mosaic — Plum Pox — Papaya Ringspot — Potato Virus Y — Sugarcane Mosaic — Tobacco Etch — Turnip Mosaic — Watermelon Mosaic — Zucchini Yellow Mosaic	767	<i>Diseases Caused by Reoviridae</i>	792
<i>Diseases Caused by Ipomoviruses, Macluraviruses, Rymoviruses, and Tritimoviruses — by Bymoviruses</i>	773	Diseases Caused by Negative RNA [(-)ssRNA] Viruses	794
Diseases Caused by Closteroviridae	774	Plant Diseases Caused by Rhabdoviruses	794
<i>Diseases Caused by Closteroviruses: — Citrus Tristeza — Beet Yellows</i>	774	<i>Plant Diseases Caused by Tospoviruses</i>	795
<i>Diseases Caused by Criniviruses: — Lettuce Infectious Yellows</i>	774	<i>Plant Diseases Caused by Tenuiviruses</i>	799
Diseases Caused by Isometric Single-Stranded RNA Viruses	779	Diseases Caused by Double-Stranded DNA Viruses	801
Diseases Caused by Sequiviridae, Genus Waikavirus	779	Diseases Caused by Caulimoviruses and Other Isometric Caulimoviridae	801
<i>Rice Tungro</i>		<i>Diseases Caused by Badnaviruses</i>	803
<i>Diseases Caused by</i>		Diseases Caused by Single-Stranded DNA Viruses	805
		Plant Diseases Caused by Geminiviridae	805
		<i>Beet Curly Top — Maize Streak — African Cassava Mosaic — Bean Golden Mosaic — Squash Leaf Curl — Tomato Mottle — Tomato Yellow Leaf Curl</i>	809
		Plant Diseases Caused by Isometric Single-Stranded	813
		DNA Viruses: The Circoviridae	813
		<i>Banana Bunchy Top</i>	814

Coconut Foliar Decay	815
<i>Viroids</i>	816
Plant Diseases Caused by Viroids	816
Taxonomy (Grouping) of Viroids	816
Potato Spindle Tuber — Citrus Exocortis — Coconut Cadang-Cadang	820
 <i>chapter fifteen</i>	
PLANT DISEASES CAUSED BY NEMATODES	
Introduction	826
Characteristics of Plant Pathogenic Nematodes	827
Morphology — Anatomy — Life Cycles — Ecology and Spread — Classification	827
Isolation of Nematodes	831
Isolation of Nematodes from Soil	831
Isolation of Nematodes from Plant Material	832
Symptoms Caused by Nematodes	832
How Nematodes Affect Plants	833
Interrelationships between Nematodes and Other Plant Pathogens	835
Control of Nematodes	836
Important Nematodes and Diseases	838
Root-Knot Nematodes: <i>Meloidogyne</i>	838
Cyst Nematodes: <i>Heterodera</i> and <i>Globodera</i>	842
<i>Soybean Cyst Nematode: Heterodera glycines</i>	843
<i>Sugar Beet Nematode: Heterodera schachtii</i>	846
<i>Potato Cyst Nematode: Globodera rostochiensis</i> and <i>Globodera pallida</i>	847
The Citrus Nematode: <i>Tylenchulus Semipenetrans</i>	848

Lesion Nematodes: <i>Pratylenchus</i>	849
The Burrowing Nematode: <i>Radopholus</i>	853
<i>The Added Significance of Plant Nematodes in the Tropics and Subtropics (Box)</i>	858
Stem and Bulb Nematode: <i>Ditylenchus</i>	858
Sting Nematode: <i>Belonolaimus</i>	860
Stubby-Root Nematodes: <i>Paratrichodorus</i> and <i>Trichodorus</i>	863
Seed-Gall Nematodes: <i>Anguina</i>	865
Foliar Nematodes: <i>Aphelenchoides</i>	867
Pine Wilt and Palm Red Ring Diseases: <i>Bursaphelenchus</i>	870
Pine Wilt Nematode: <i>Bursaphelenchus xylophilus</i>	870
Red Ring Nematode: <i>Bursaphelenchus cocophilus</i>	872
 <i>chapter sixteen</i>	
PLANT DISEASES CAUSED BY FLAGELLATE PROTOZOA	
Introduction	875
Nomenclature of Plant Trypanosomatids — Taxonomy — Pathogenicity — Epidemiology and Control of Plant Trypanosomatids	877
Plant Diseases Caused by: <i>Phloem-Restricted Trypanosomatids</i>	878
Phloem Necrosis of Coffee — Hartrot of Coconut Palms — Sudden Wilt (Marchitez Sopresiva) of Oil Palm — Wilt and Decay of Red Ginger	878
<i>Laticifer-Restricted trypanosomatids</i>	882
Empty Root of Cassava	882
<i>Fruit-and Seed-Infecting Trypanosomatids</i>	882
Fruit Trypanosomatids	882
Glossary	887
Index	903
