Chapter 1 The Synthesis and Properties of Block Copolymer Polyol Surfactants L. G. Lundsted and I. R. Schmolka

1. Structure and Synthesis	1
(i) Definition of Block Copolymer Polyol Surfactants	1
A. Introduction	1
B. Initiators	2
C. Epoxides Forming the Hydrophobe	2
D. Epoxides Forming the Hydrophile	3
E. Exclusions from the Block Copolymer Polyol Surtactant Classification	3
F. Structure	4
(1) All-Block Copolymer Polyol Surtactants	5
(2) Block-Heteric Copolymer polyol Surfactants	5
(3) All Heteric Copolymer Polyol Surfactants	7
(ii) Synthesis of Block Copolymer Polyol Surfactants	7
A. Introduction	7
B. Synthesis Procedure	8
C. Mechanism of Block Copolymer Polyol Surtactant Formation	10
D. Direction of Addition of Initiators to Epoxides	12
E. Catalysts for Epoxide Polymerization	13
F. By-Product Formation	14
G. Reactions of Initiator Molecules with Epoxides	15
(1) Fatty Acids	15
(2) Hydroxy Acids	15
(3) Amines	16
(4) Thiols	16
(5) Alcohols	16
H. Effect of Temperature	17
I. Effect of Impurities in the Initiator and Epoxide	17
J. Development of Unsaturation	17
K. Variation of Theoretical and Found Molecular Weights	20

L. Removal of Volatile By-Products	21
M. Neutralization of Catalyst	22
N. Decolorizing Surfactant Products	22
O. Stabilization of Block Copolymer Polyol Surfactants	22
2. Properties	24
(i) Copolymers from Monofunctional Initiators	24
A. All-Block Polyols	24
(1) RPE Nonionic Surfactants	24
(2) REP Nonionic Surfactants	28
B. Block-Heteric Polyols	30
C. All-Heteric Polyols	31
(ii) Copolymers from Bifunctional Initiators	31
A. All-Block Polyols	31
(1) PLURONIC® Nonionic Surfactants	31
(2) 'Inverted' PLURONIC® Nonionic Surfactants ..	62
(3) Nonionic Surfactants Based on Butylene Oxide ..	68
(4) Miscellaneous Nonionic Surfactants	72
B. Heteric-Block Polyols	75
(1) Heteric-Block Nonionic Surtactants	75
C. All-Heteric Polyols	78
(iii) Copolymers from Trifunctional Initiators	78
A. All-Block Polyols	78
(1) Glycerol-Initiated Nonionic Surfactants	78
(2) Other Triol-Initiated Nonionic Surfactants	81
(3) 'Inverted' Triol-Initiated Nonionic Surfactants ..	82
(4) Nonionic Surfactants Based on 1,2-Butylene Oxide ..	83
B. Heteric-Block Polyols	86
(1) Heteric-Block Nonionic Surfactants	86
C. All-Heteric Polyols	86
(1) All-Heteric Nonionic Surfactants	86
(iv) Copolymers from Tetrafunctional Initiators	89
A. All-Block Polyols	89
(1) TETRONIC® Nonionic Surfactants	89
(2) 'Inverted' TETRONIC® Nonionic Surfactants ..	98
(3) Pentaerythritol-Initiated Nonionic Surfactants ..	99
B. Heteric-Block Polyols	99
(1) Pentaerythritol-Initiated Nonionic Surfactants ..	99
(v) Copolymers from Pentafunctional Initiators	100
A. All-Block Polyols	100
(1) Polyamine-Initiated Nonionic Surfactants	100
(vi) Copolymers from Hexafunctional Initiators	100
A. All-Block Polyols	100
(1) Hexitol-Initiated Nonionic Surfactants	100

(2) Triethylenetetramine-Initiated Nonionic Surfactants	101
(vii) Copolymers from Octafunctional Initiators	101
A. All-Block Polyols	101
(1) Sucrose-Initiated Nonionic Surfactants	101
(viii) Chemical Properties	102
References	103

Chapter 2 The Applications of Block Copolymer Polyol Surfactants

L. G. Lundsted and I. R. Schmolka

1. Introduction	113
2. Agricultural Chemicals	114
3. Automotive	118
4. Construction	119
5. Corrosion	121
6. Cosmetics	122
(i) General	122
(ii) Hair Products	124
(iii) Skin Creams	128
(iv) Oral Products	129
(v) Aerosol Antiperspirants	131
7. Detergents	131
(i) Abrasive Cleaners	131
(ii) Bars and Tablets	132
(iii) Hard Surface	135
(iv) Heavy-Duty Liquid	137
(v) Heavy-Duty Powder	139
(vi) Low Foam	144
(vii) Mechanical Dishwasher	145
(viii) Miscellaneous	148
A. Alkaline Cleaners	148
B. Alkali-Stable Detergents	149
C. Enzyme Detergents	149
D. Foaming Detergents	150
E. Gel Cleaning Compositions	150
F. Oven Cleaner	151
G. Plastic Cleaning	151
H. Steam Cleaning	151
I. Tarnish Prevention	152
J. Toilet Bowl Cleaner	152
(ix) Rinse Aids	152
(x) Sanitizers	155

(xi) Soap Combinations	158
(xii) Wetting	159
8. Dyes	159
9. Emulsion Polymerization	162
10. Fermentation	168
11. Food	169
12. Functional Fluids	171
13. Ink	172
14. Lubricants	173
15. Medical and Pharmaceutical	174
(i) Introduction	174
(ii) Topical Applications	175
(iii) Ear and Eye Preparations	177
(iv) Gastrointestinal Preparations	178
(v) Complexing Phenomena	182
(vi) Intravenous Fat Emulsions	185
(vii) Other Parenteral Applications	193
(viii) Uses with Natural Blood	194
(ix) Fluorocarbon Emulsions	201
(x) Miscellaneous	203
16. Metal Cleaning and Working	205
(i) General	205
(ii) Cleaning	205
(iii) Electroplating	210
(iv) Lubricants	211
17. Paint	212
18. Paper	213
(i) Coating	213
(ii) Miscellaneous	216
19. Petroleum	218
(i) Production	218
(ii) Waterflooding	221
(iii) Demulsification	222
(iv) Miscellaneous	224
20. Photography	225
21. Plastics and Polymers	227
(i) Plasticizers	227
(ii) Antistatic Action	228
(iii) Plastic Powders	228
(iv) Foamed Plastics	230
(v) Laminating Resin	230
(vi) Graft Copolymers	231
22. Polyurethanes	231

23. Rubber	238
24. Textiles	239
25. Veterinary	244
(i) Bloat	244
(ii) Poultry	246
(iii) Simulated Milk	246
(iv) Miscellaneous	247
26. Water Treatment	247
27. Miscellaneous	249
(i) Dewatering Starch Slurries	249
(ii) Emulsions of Bodied Oil-in-Water	249
(iii) Fire Extinguishing	250
(iv) Formaldehyde Stabilization	250
(v) Froth Flotation	250
(vi) Fuel Cells	251
(vii) Gas Generation	251
(viii) Gelled Fuels	252
(ix) Ice Melting	252
(x) Microcapsules	253
(xi) Ore Treatment	253
(xii) Phosphate and Chloramine Esters	253
(xiii) Printing	254
(xiv) Purification of Hydroxymethyl Furfural	254
(xv) Reaction Medium	254
(xvi) Salt Production	254
References	255

Chapter 3 The Synthesis of Block and Graft Copolymers of Poly(vinyl chloride)

R. J. Ceresa

1. Introduction	273
2. Block Copolymers of Poly(vinyl chloride)	274
(i) Block Copolymerization of Poly(vinyl chloride) by Chemical Reactions	275
A. Long-Life Radical Syntheses	275
B. Mechanochemical Syntheses	276
(1) Cold Mastication	276
(2) High-Voltage Discharges	279
(3) Vibro-Milling	280
3. Graft Copolymers with a Backbone of Poly(vinyl chloride)....	280
(i) Irradiation Techniques	280
A. Grafting of Monomers by Preirradiation	281
B. Grafting to Peroxided Poly(vinyl chloride)	281

C. The 'Direct' Method of Irradiation Grafting	282
D. Miscellaneous Irradiation Grafting Methods	284
(ii) Chemical Synthesis	285
A. Free-Radical Initiation	285
B. Oxidation Grafting Reactions	289
C. Miscellaneous Free-Radical Processes	290
D. Ionic Grafting Reactions	291
4. Graft Copolymers with Poly(vinyl chloride) as the Grafted Chains	292
(i) Graft Copolymers Based on Ethylene-Vinyl Acetate Copolymers	292
A. Suspension Copolymerization	292
B. Emulsion Copolymerization	293
C. Bulk Copolymerization	293
D. Grafting to Partially Saponified EVA Copolymers	293
E. Grafting of More Than One Monomer	293
F. Grafting to Chemically Modified Polymers	294
G. Crosslinked Graft Copolymers	294
(ii) Graft Copolymers Based on Polyethylene	294
A. Free-Radical Copolymerization	294
B. Irradiation Techniques	295
(iii) Graft Copolymers Based on Polypropylene	295
(iv) Graft Copolymers Based on Ethylene-Propylene Copolymers	296
(v) Graft Copolymers Based on Polyolefins in General	296
(vi) Grafting to Halogenated Polyolefins	297
(vii) Grafting to Other Polymer Backbones	297
A. Grafting to Elastomers	297
B. Grafting to Acrylic Polymers and Copolymers	298
C. Grafting to Cellulosics	299
D. Grafting to Polyethers, Polyglycols, and Poly(vinyl pyrrolidone)	299
E. Grafting to Polyesters and Other Polymers	300
5. Miscellaneous Grafting and Block Copolymerization Processes	301
6. Conclusion	301
References	302

Chapter 4 Properties and Applications of Graft Copolymers of Poly(vinyl chloride) D. Hardt

1. Introduction	315
2. Graft Copolymers of Vinyl Chloride on Various Polymeric Substrates	316
(i) Graft Copolymers of Vinyl Chloride with Polydienes and Diene Copolymers	317

(ii) Graft Copolymers of Vinyl Chloride with Polyolefins and Their Derivatives	319
A. Graft Copolymers of Vinyl Chloride with Polyethylene and Polypropylene	320
B. Graft Copolymers of Vinyl Chloride with Ethylene-Propylene Copolymers	321
C. Graft Copolymers of Vinyl Chloride with Halogenated Polyolefins	325
D. Graft Copolymers of Vinyl Chloride with Ethylene-Vinyl Ester Copolymers	329
(1) Impact-Resistant and Semi-Rigid PVC	331
(2) Flexible PVC	338
(3) Structure of EVA-Elasticized PVC	340
E. Graft Copolymers of Vinyl Chloride on Polyolefin Copolymers	342
F. Applications for Graft Copolymers of Vinyl Chloride on Olefin Polymers, Olefin Copolymers, and Their Derivatives	342
(iii) Graft Copolymers of Vinyl Chloride on Polyacrylic and Polymethacrylic Esters	344
(iv) Graft Copolymers of Vinyl Chloride on Other Vinyl Polymers	345
(v) Graft Copolymers of Vinyl Chloride on Polyethers, Polyesters, and Polyamides	346
(vi) Graft Copolymers of Vinyl Chloride on Polysiloxanes	347
(vii) Graft Copolymers of Vinyl Chloride on Cellulose and Other Natural Products	349
3. Graft Copolymers with Poly(vinyl chloride) as the Backbone Polymer	350
(i) General Properties	350
(ii) Impact-Resistant Rigid PVC	353
(iii) Modified Rigid PVC	357
(iv) Flexible, Crosslinkable, and Thermoset PVC	357
(v) Cellular PVC	358
(vi) Polyurethanes Modified by Grafted PVC	363
(vii) Dispersions for Use as Coatings, Paints, and Adhesives	363
(viii) PVC Fibers Modified by Grafting	365
(ix) Other Graft Copolymers on PVC	365
