Preface iii
Introduction iv
Contributors vii

1. Melt-Viscosity Characterization and Its Application to Injection Molding 1

Cornelius A. Hieber

I. Introduction 1
II. Melt-Viscosity Characterization 2
A. Viscosity Fits Using Cross-Arrhenius Model 2
B. Master Plots 8
C. Incorporating Pressure Dependence 15
III. Simulation of Cavity Filling 23
A. Simple Geometries 23
B. Composites of Simple Geometries 36
C. Thin Cavities of Arbitrary Planar Geometry 44
IV. Post-Filling Stage 61
Appendices
A. Dependence of n upon M_w/M_n 78
B. Dependence of τ^* upon M_w/M_n 79
C. Dependence of T_b on Temperature Level 80
D. Dependence of η_0 upon M_w 85
E. Relationship between τ^* and J_e^0 86
F. Juncture-Pressure Correlation 96

G. Melt-Fracture Correlation 101
H. Comparison of Cross and Carreau Models 104
I. Viscous-Heating Effects in Capillary Rheometry 107
J. Fitting Capillary-Rheometer Data Accounting for Pressure Dependence and Viscous Heating 111
K. "Fountain" Effect 124
References 129

2. **Flow of Polymeric Melts in Junture Regions of Injection Molding** 137

Avraam I. Isayev and Ram K. Upadhyay

I. Introduction 137
II. Experimental Results for Two-Dimensional Flow of Polymers 138
A. Flow-Through Channels with Contraction or Expansion 138
B. Entry and Exit Flow Effects 152
III. Modeling Two-Dimensional Flow 176
A. General 176
B. Generalized Newtonian Fluid Models 179
C. Viscoelastic Models 186
IV. Predicted Results Compared with Experimental Results 206
V. Implications for Juncture-Type Flow in Mold Design 218
References 221

3. **Orientation, Residual Stresses, and Volumetric Effects in Injection Molding** 227

Avraam I. Isayev

I. Introduction 227
II. Development of Orientation in Injection Molding 228
A. Experimental Techniques 228
B. Modeling Orientation in Terms of Birefringence 233
C. Thermal- and Flow-Induced Birefringence 242
D. Orientation in Molded Parts of Amorphous Polymers 246
III. Development of Residual Stress in Injection Molding 257
A. Experimental Techniques for Residual-Stress Measurements 257
B. Thermal- and Flow-Induced Stresses 264
C. Modeling of Residual Stresses 273

D. Effects of Processing Conditions on Residual Stresses 285
E. Comparison of Flow, Thermal, and Residual Stresses in Molded Parts 294
IV. Development of Density and Shrinkage in Injection Molding 296
V. Concluding Remarks 319
References 322

4. Thermoset Injection Molding 329

Musa R. Kamal and Michael E. Ryan

I. Introduction 329
II. Thermoset Resin Characterization 330
A. Kinetic Characterization 330
B. Rheological Characterization 344
C. Thermal Properties 350
D. Effect of Fillers on Kinetics and Rheological and Thermal Properties 357
III. Thermoset Injection-Molding Simulation 359
A. Injection-Molding Systems: Equipment and Resins 359
B. Mathematical Modeling and Computer Simulation 363
IV. Conclusions 372
References 372

5. Rheological Behavior and Molding Technology of Elastomers 377

Henry S.-Y. Hsich and Richard J. Ambrose

I. Introduction 377
II. Relaxation Spectra of Elastomers 379
A. The Rubbery State 381
B. A Hybrid Model for Mechanical Spectra of Filled and Unfilled Elastomers 381
C. Composite Mechanics of Filled Elastomers 389
III. Flow Rheology of Elastomers 392
A. Viscosity Theory of Polymers 393
B. Viscosity Studies of Elastomers and Shear-Flow-Induced Structural Changes of Molecules 395
C. Effects of Filler on the Viscosity of Elastomers 398
IV. Chemorheology of Elastomers 402
A. Chemical Reactions of Cure 403
B. Kinetic Model of Cure as an Aid to Property and Processing Control 409

V. Molding Technology of Elastomers 421
A. Elastomers as Engineering Materials 421
B. Elastomer Molding 422
C. The Use of Elastomer Rheological Properties in Molding Laminated Elastomer Composites 424
D. Summary 430
References 431

6. Injection Molding of Rubber Compounds 435

Avraam I. Isayev

I. Introduction 435
II. Progress in Injection Molding of Rubber 436
A. Introductory Remarks 436
B. Injection Machines 437
C. Rheology of Rubber Compounds 439
D. Scorching and Moldability 444
E. Modeling of the Injection-Molding Process 446
F. Characterization of Rubber Molding 459
III. Suggestions for Future Work 464
A. General 464
B. Characterization of Rubber Compounds 464
C. Experimental Investigation and Modeling of the Molding Process 466
IV. Concluding Remarks 473
References 473

7. Compression Molding of Polymers and Composites 481

Charles L. Tucker III

I. Introduction 481
A. Technological Significance of Compression Molding 481
B. Critical Issues 482
C. Scope of This Chapter 483
D. Stages in the Compression Molding Process 483
II. Flow Models for Thin Cavities 485
A. Approximations for Thin Parts 485
B. Generalized Hele-Shaw Flow Model 488
C. Lubricated Squeezing Flow Model 497
D. Controlling Flow in the Mold 504
III. Heat Transfer and Curing 504
A. Heat Transfer During Mold Filling 506
B. Kinetics of the Curing Reaction 510
C. Heat Transfer and Curing 516

D. Thermal Design of Molds 520
E. Residual Stresses 523
IV. More Complex Rheological Effects 528
A. Effect on Mold Filling Pattern 528
B. Effect on Mold Closing Force 533
V. Fiber Orientation 539
A. Phenomenology 539
B. Models for Concentrated Suspensions 542
C. Predicting Fiber Orientation 547
D. Measuring and Characterizing Fiber Orientation 554
E. Fiber Damage During Flow 559
VI. Summary and Conclusions 560
References 562

8. Design of Mold Cooling System 567

Kamar J. Singh

I. Introduction 567
II. Heat Transfer in Molds 568
A. Conduction 569
B. Convection 570
C. Radiation 574
III. Cooling of Plastic 575
IV. Heat Flow Through Molds 580
V. Cooling System 581
A. Cooling Lines 581
B. Heat Pipes 581
C. Bubblers 583
D. Baffles 585
VI. Coolants 586
VII. Design of Cooling System 587
VIII. Optimum Parameters 572
IX. Defects in Plastic Parts 593
A. Warpage 594
B. Residual Stress 595
X. Computer-Aided Design of Cooling Systems 597
A. Computer Software 598
B. Example Problems 598
References 605

9. Computer-Aided Mold Design and Manufacturing 607

K. K. Wang and V. W. Wang

I. Introduction 607
A. Typical Mold Configurations 607

B. Conventional Mold Design and Manufacturing Methods 608
C. Computer-Based Mold Design and Manufacture 609
II. Overview of Interactive Computer Graphics and Geometric Modeling 610
A. Display Devices 611
B. Input Devices and Techniques 613
C. Geometric Modeling 615
III. CAD/CAE/CAM Software for Injection Molding 620
A. Runner System Design 621
B. Mold-Filling Simulation Programs 634
C. Cooling-System Design Program with Three-Dimensional Boundary Element Method 649
D. Mold Assembly Design 657
E. Computer-Aided Mold Manufacturing 659
F. Integrated System for Mold Design and Manufacture 662
IV. Concluding Remarks 667
References 668
