

# Contents

Preface, vii

Introduction: Ecology and its Domain, xi

## Part 1: Organisms

- 1 Organisms in their Environments: the Evolutionary Backdrop, 3
- 2 Conditions, 30
- 3 Resources, 58
- 4 Life, Death and Life Histories, 89
- 5 Intraspecific Competition, 132
- 6 Dispersal, Dormancy and Metapopulations, 163
- 7 Ecological Applications at the Level of Organisms and Single-Species Populations: Restoration, Biosecurity and Conservation, 186

## Part 2: Species Interactions

- 8 Interspecific Competition, 227
- 9 The Nature of Predation, 266
- 10 The Population Dynamics of Predation, 297
- 11 Decomposers and Detritivores, 326
- 12 Parasitism and Disease, 347
- 13 Symbiosis and Mutualism, 381
- 14 Abundance, 410
- 15 Ecological Applications at the Level of Population Interactions: Pest Control and Harvest Management, 439

**Part 3: Communities and Ecosystems**

- 16 The Nature of the Community: Patterns in Space and Time, 469
- 17 The Flux of Energy through Ecosystems, 499
- 18 The Flux of Matter through Ecosystems, 525
- 19 The Influence of Population Interactions on Community Structure, 550
- 20 Food Webs, 578
- 21 Patterns in Species Richness, 602
- 22 Ecological Applications at the Level of Communities and Ecosystems: Management Based on the Theory of Succession, Food Webs, Ecosystem Functioning and Biodiversity, 633

References, 659

Organism Index, 701

Subject Index, 714
