Preface xv

Review Questions and Problems 48
Suggested Readings 48

PART ONE		WHAT IS ECOLOGY?	1	PART TWO		GEOGRAPHIC DISTRIBUTIONS	49
Chapter 1	Introduction to the Science of Ecology		4	Chapter 4	Analyzing Geographic Distributions	52	
	Introduction to the Science of Ecology	5			Transplant Experiments	54	
	<i>Definition of Ecology</i>	5			Physiological Ecology	54	
	<i>History of Ecology</i>	5			<i>Essay: Liebig's Law of the Minimum</i>	55	
	<i>Basic Problems and Approaches to Ecology</i>	9			Adaptation	56	
	<i>Essay: Science and Values in Ecology</i>	10			Experiments in Geographic Ecology	58	
	<i>Levels of Integration</i>	12			Summary	59	
	<i>Methods of Approach to Ecology</i>	13			Review Questions and Problems	60	
	<i>Application of the Scientific Method to Ecology</i>	14			Suggested Readings	60	
	<i>Essay: On Ecological Truth</i>	15		Chapter 5	Factors That Limit Distributions I: Biotic	61	
	Review Questions and Problems	16			Dispersal Limitation on Geographic Distributions	62	
	Suggested Readings	16			<i>Zebra Mussel (Dreissena polymorpha)</i>	62	
Chapter 2	Evolution and Ecology	18			<i>California Sea Otter (Enhydra lutris)</i>	63	
	What Is Evolution?	19			<i>Cane Toad (Bufo marinus)</i>	63	
	<i>Essay: What Is Fitness?</i>	20			The Three Modes of Dispersal	63	
	Adaptation	21			<i>Essay: Ships, Ballast Water, and Marine Dispersal</i>	66	
	<i>Clutch Size in Birds</i>	23			Colonization and Extinction	68	
	Coevolution	26			<i>Habitat Selection</i>	69	
	Evolution and "Arms Races"	27			Evolution of Habitat Preferences	70	
	Units of Selection	27			<i>Limitation by Predators</i>	72	
	<i>Gametic Selection</i>	28			Disease and Parasitism	74	
	<i>Kin Selection</i>	28			Allelopathy	75	
	<i>Group Selection</i>	28			Competition	77	
	Summary	29			<i>Essay: What Is Competition?</i>	77	
	Review Questions and Problems	29			Summary	79	
	Suggested Readings	30			Review Questions and Problems	79	
Chapter 3	Behavioral Ecology	32			Suggested Readings	80	
	All Behaviors Have Costs and Benefits	34		Chapter 6	Factors That Limit Distributions II: Abiotic	81	
	<i>Territorial Defense</i>	35			Climatology	82	
	<i>Optimal Foraging</i>	36			Temperature and Moisture as Limiting Factors	85	
	<i>Optimal Migration</i>	39			<i>Interaction between Temperature and Moisture</i>	86	
	Group Living	40			<i>Adaptations to Temperature and Moisture</i>	88	
	<i>Benefits of Group Living</i>	40				90	
	<i>Essay: Do Individuals Act for the Good of the Species?</i>	43					
	<i>Costs of Group Living</i>	44					
	<i>Group Living in African Lions</i>	45					
	Summary	47					

	Light as a Limiting Factor	91
	Climate Change and Species	
	Distributions	94
	Summary	97
	Review Questions and Problems	97
	Suggested Readings	98
Chapter 7	Distribution and Abundance	99
	The Spatial Scale of Geographic	
	Ranges	100
	Variations in Geographic Range Size	100
	Range Size and Abundance	105
	Summary	108
	Review Questions and Problems	108
	Suggested Readings	109
PART THREE	THE PROBLEM	
	OF ABUNDANCE:	
	POPULATIONS	111
Chapter 8	Population Parameters and	
	Demographic Techniques	113
	The Population as a Unit of Study	114
	<i>Working with the Data:</i> Calculation	
	of Expected Population Density	
	from the Regression Data Given	
	in Table 8.2	114
	Unitary and Modular Organisms	115
	Estimation of Population Parameters	115
	<i>Working with the Data:</i> Calculation	
	of Per Capita Rates	117
	<i>Measurements of Absolute Density</i>	118
	<i>Indices of Relative Density</i>	120

	<i>Natality</i>	121
	<i>Mortality</i>	121
	<i>Immigration and Emigration</i>	121
	Demographic Techniques	122
	Life Tables	122
	<i>Working with the Data:</i> Calculation	
	of the Intrinsic Capacity for	
	Increase from Lotka's	
	Characteristic Equation	124
	<i>Intrinsic Capacity for Increase</i>	
	in Numbers	127
	<i>Essay:</i> Demographic Projections	
	and Predictions	131
	Reproductive Value	132
	Age Distributions	133
	Evolution of Demographic Traits	134
	Limitations of the Population	
	Approach	138
	Composition of Populations	139
	Summary	139
	Review Questions and Problems	140
	Suggested Readings	141
Chapter 9	Population Growth	142
	Mathematical Theory	143
	<i>Growth in Populations with Discrete</i>	
	<i>Generations</i>	143
	<i>Growth in Populations with</i>	
	<i>Overlapping Generations</i>	146
	<i>Working with the Data:</i> What Is	
	Little- <i>r</i> , and Why Is It So	
	Confusing?	147
	Laboratory Tests of the Logistic	
	Theory	148
	Field Data on Population Growth	149
	Theta (θ) Logistic Model	
	of Population Growth	151
	Time-Lag Models of Population	
	Growth	153
	<i>Working with the Data:</i> A Simple	
	Time-Lag Model of Population	
	Growth	153
	Stochastic Models of Population	
	Growth	154
	Population Projection Matrices	156
	<i>Essay:</i> What Is a "Good" Population	
	Growth Model?	157
	Summary	160
	Review Questions and Problems	160
	Suggested Readings	162
Chapter 10	Species Interactions I:	
	Competition	163
	Classification of Species Interactions	

Theories on Competition for Resources	165	Mycorrhizae: An Example of Mutualism	227
<i>Mathematical Model of Lotka and Volterra</i>	165	Complex Species Interactions	229
<i>Tilman's Model</i>	168	<i>Essay: Herbivory, Economics, and Land Use</i>	231
Competition in Experimental Laboratory Populations	169	<i>Summary</i>	232
Competition in Natural Populations	172	<i>Review Questions and Problems</i>	232
Evolution of Competitive Ability	179	<i>Suggested Readings</i>	233
<i>Theory of r-Selection and K-Selection</i>	179	Chapter 13	
<i>Grime's Theory of Plant Strategies</i>	180	Species Interactions IV: Disease and Parasitism	234
<i>Westoby's Leaf-Height-Seed Theory of Plant Strategies</i>	181	<i>Mathematical Models of Host-Disease Interaction</i>	235
Character Displacement	182	<i>Compartment Models with Constant Population Size</i>	236
Apparent Competition and Indirect Effects	183	<i>Working with the Data: How Can We Determine R_0?</i>	
<i>Essay: What Is a Phase Plane, and What Is an Isocline?</i>	185	<i>A Mathematical Excursion</i>	237
<i>Summary</i>	185	<i>Compartment Models with Variable Population Size</i>	238
<i>Review Questions and Problems</i>	186	Effects of Disease on Individuals	239
<i>Suggested Readings</i>	187	<i>Effects on Reproduction</i>	239
Chapter 11		<i>Effects on Mortality</i>	240
Species Interactions II: Predation	188	Effects of Disease on Populations	242
<i>Mathematical Models of Predation</i>	190	<i>Brucellosis in Ungulates</i>	243
<i>Discrete Generations</i>	190	<i>Rabies in Wildlife</i>	243
<i>Continuous Generations</i>	191	<i>Working with the Data: A Simple Rabies Model</i>	246
Laboratory Studies of Predation	194	<i>Myxomatosis in the European Rabbit</i>	247
Field Studies of Predation	197	<i>Bovine Tuberculosis in New Zealand Brushtail Possums</i>	248
<i>Essay: Laboratory Studies and Field Studies of Predation</i>	197	Evolution of Host-Parasite Systems	251
How Do Prey Persist?	202	<i>Essay: What Is the Transmission Coefficient (β), and How Can We Measure It?</i>	251
Evolution of Predator-Prey Systems	203	<i>Essay: What Is the Red Queen Hypothesis?</i>	253
<i>Warning Coloration</i>	205	<i>Summary</i>	254
<i>Summary</i>	207	<i>Review Questions and Problems</i>	254
<i>Review Questions and Problems</i>	207	<i>Suggested Readings</i>	255
<i>Suggested Readings</i>	208	Chapter 14	
Chapter 12		Regulation of Population Size	256
Species Interactions III: Herbivory and Mutualism	210	<i>Essay: Why Is Population Regulation So Controversial?</i>	258
Defense Mechanisms in Plants	211	<i>A Simple Model of Population Regulation</i>	258
Plant Defense Hypotheses	212	<i>A Synthesis of Population Regulation</i>	260
<i>The Optimal Defense Hypothesis</i>	212	<i>Essay: Definitions in Population Regulation</i>	
<i>The Resource Availability Hypothesis</i>	213	<i>Regulation</i>	260
<i>Tannins in Oak Trees</i>	215	<i>Allee Effects and Compensation</i>	263
<i>Ants and Acacias</i>	216	<i>Two Approaches to Studying Population Dynamics</i>	266
<i>Spines and Thorns in Terrestrial Plants</i>	217	<i>Key Factor Analysis</i>	266
Herbivores on the Serengeti Plains	218	<i>Experimental Analysis</i>	269
Can Grazing Benefit Plants?	221		
Dynamics of Herbivore Populations	222		
<i>Interactive Grazing: Ungulate Irruptions</i>	223		
<i>Noninteractive Grazing: Finch Populations</i>	226		

Plant Population Regulation	270	Chapter 17	Applied Problems III: Conservation Biology	323	
Source and Sink Populations	271		Small-Population Paradigm	325	
Evolutionary Implications of Population Regulation	272		<i>Minimum Viable Populations</i>	325	
Summary	274		Working with the Data: What Is Effective Population Size?	327	
Review Questions and Problems	274		<i>Essay: Diagnosing a Declining Population</i>	330	
Suggested Readings	276		The Declining-Population Paradigm	328	
Chapter 15	Applied Problems I: Harvesting Populations	277	<i>Overkill</i>	330	
Logistic Models	280		<i>Habitat Destruction and Fragmentation</i>	331	
Dynamic Pool Models	281		Impacts of Introduced Species	337	
Stock and Recruitment in Fish Populations	284		<i>Chains of Extinctions</i>	338	
The Concept of Optimum Yield	286		Working with the Data: Recovery of Petrels after Eradication		
Case Study: The King Crab Fishery of Bristol Bay, Alaska	287		of Feral Cats on Marion Island, Indian Ocean	339	
Case Study: The Western Rock Lobster Fishery of Australia	289		Reserve Design and Reserve Selection	339	
Case Study: Antarctic Whaling	291		Working with the Data: An Algorithm for Choosing Reserves for a Taxonomic Group	341	
<i>Essay: Principles of Effective Resource Management</i>	293		Examples of Conservation Problems	341	
Risk-Aversive Management Strategies	293		<i>The Northern Spotted Owl in the Pacific Northwest</i>	342	
<i>Essay: What Are the Harvest Strategies for a Fishery?</i>	294		<i>Leadbeater's Possum in Australia</i>	344	
Harvesting and Natural Selection	295		Conclusion	345	
Summary	297		Summary	346	
Review Questions and Problems	297		Review Questions and Problems	347	
Suggested Readings	298		Suggested Readings	348	
Chapter 16	Applied Problems II: Pest Control	299	PART FOUR	DISTRIBUTION AND ABUNDANCE AT THE COMMUNITY LEVEL	349
Examples of Biological Control	301				
<i>Essay: When Can We Eradicate Pests?</i>	302	Chapter 18	Community Structure in Time: Succession	352	
<i>Cottony-Cushion Scale</i> (<i>Icerya purchasi</i>)	302		Primary Succession on Mount St. Helens	354	
<i>Prickly Pear</i> (<i>Opuntia spp.</i>)	303		Concepts of Succession	357	
<i>Floating Fern</i> (<i>Salvinia molesta</i>)	305		<i>Essay: What Is the Gaia Hypothesis? A Simple Mathematical Model of Succession</i>	360	
Theory of Biological Control	306		Case Studies of Succession	360	
Genetic Controls of Pests	308		<i>Surtsey, Iceland: Primary Succession on a Volcanic Island</i>	364	
Immuocontraception	311			364	
Cultural Control of Pests	313				
Integrated Control	314				
Generalizations about Biological Control	316				
Risks of Biological Control	319				
Summary	320				
Review Questions and Problems	321				
Suggested Readings	322				

<i>Lake Michigan Sand-Dune</i>		
<i>Succession</i>	365	
<i>Succession of Insects on Carrion</i>	368	
The Climax State	370	
Patch Dynamics	372	
Summary	375	
Review Questions and Problems	375	
Suggested Readings	376	
Chapter 19	Community Structure in Space: Biodiversity	
	377	
	Measurement of Biodiversity	378
	Essay: Biodiversity: A Brief History	379
	<i>Sequential Niche Breakage Hypothesis</i>	381
	<i>The Neutral Theory of Biodiversity</i>	381
	Some Examples of Diversity Gradients	382
	Hotspots of Biodiversity	385
	Six Factors That Cause Diversity	
	<i>Gradients</i>	387
	<i>Evolutionary Speed Hypothesis</i>	387
	<i>Geographic Area Hypothesis</i>	389
	Working with the Data: How Spatial Scale Affects Biodiversity	
	<i>Measurements</i>	390
	<i>Interspecific Interactions</i>	390
	<i>Ambient Energy Hypothesis</i>	393
	<i>Productivity Hypothesis</i>	396
	<i>Intermediate Disturbance Hypothesis</i>	396
	Local and Regional Diversity	397

Chapter 20	Community Dynamics I: Predation and Competition in Equilibrium Communities
	401
	Working with the Data: Measuring Community Importance
	403
	Food Chains and Trophic Levels
	405
	Functional Roles and Guilds in a Community
	409
	Essay: Use of Stable Isotopes to Analyze Food Chains
	410
	Keystone Species
	412
	Dominant Species
	414
	Essay: Fishing Down Food Webs
	416
	Community Stability
	417
	Restoration Ecology
	419
	Summary
	422
	Review Questions and Problems
	423
	Suggested Readings
	424
Chapter 21	Community Dynamics II: Disturbance and Nonequilibrium Communities
	425
	Patches and Disturbance
	426
	The Role of Disturbance in Communities
	428
	<i>Coral Reef Communities</i>
	428
	Essay: Why Are Corals Bleaching?
	430
	<i>Rocky Intertidal Communities</i>
	433
	Theoretical Nonequilibrium Models
	434
	Conceptual Models of Community Organization
	435
	Essay: Biomanipulation of Lakes
	438
	The Special Case of Island Species
	440
	Working with the Data: Measuring Immigration and Extinction Rates
	444
	Multiple Stable States in Communities
	445
	Summary
	448
	Review Questions and Problems
	449
	Suggested Readings
	450
Chapter 22	Ecosystem Metabolism I: Primary Production
	451
	Primary Production
	454
	Factors That Limit Primary Productivity
	458
	<i>Aquatic Communities</i>
	458

	Essay: Nutrient Ratios and Phytoplankton	465
	<i>Terrestrial Communities</i>	465
	Working with the Data: Estimating Primary Production from Satellite Data	466
	Essay: Why Does Primary Production Decline with Age in Trees?	469
	Plant Diversity and Productivity	471
	Summary	472
	Review Questions and Problems	472
	Suggested Readings	473
Chapter 23	Ecosystem Metabolism II: Secondary Production	475
	Measurement of Secondary Production	476
	Working with the Data: Estimating Energy Expenditure with Doubly Labeled Water	478
	Problems in Estimating Secondary Production	481
	Ecological Efficiencies	482
	Essay: Thermodynamics and Ecology	483

	What Limits Secondary Production? Grassland Ecosystems	487
	<i>A Krill-Centered Food Web in the Southern Ocean</i>	490
	Essay: Why Is the World Green?	491
	Metabolic Theory of Ecology	493
	Summary	494
	Review Questions and Problems	494
	Suggested Readings	495
Chapter 24	Ecosystem Metabolism III: Nutrient Cycles	496
	Nutrient Pools and Exchanges	497
	Nutrient Cycles in Freshwater Ecosystems	499
	Nutrient Cycles in Forests	500
	Essay: How Does Phosphorus Get to Hawaii?	501
	Working with the Data: Estimating Turnover Time for Nutrients	504
	Efficiency of Nutrient Use	506
	Acid Rain: The Sulfur Cycle	510
	Essay: Acid Rain and the Sudbury Experience	510
	The Nitrogen Cycle	514
	Summary	517
	Review Questions and Problems	518
	Suggested Readings	519
Chapter 25	Ecosystem Dynamics under Changing Climates	520
	Climate Change in the 21st Century	521
	Essay: El Niño and the Southern Oscillation	524
	The Carbon Cycle	526
	Climate Change Effects on the Biosphere	529
	<i>Individual Plant Responses to CO₂</i>	529
	<i>Plant Community Responses to CO₂</i>	530
	<i>Animal Community Responses to Changing Climate</i>	533
	Biotic Invasions and Climate Change	534
	Essay: On Corals and Climate Change	535
	Summary	536
	Review Questions and Problems	537
	Suggested Readings	538

Chapter 26	Ecosystem Health and Human Impacts	539	Sustainability	556	
	Human Population Growth	540	Ecosystem Health	559	
	<i>Current Patterns of Population Growth</i>	540	Summary	560	
			Review Questions and Problems	561	
			Suggested Readings	562	
	Working with the Data: How Large Is a Billion Anyway?	541			
	Essay: The Demographic Transition: An Evolutionary Dilemma	542	Appendix I	A Primer on Population Genetics	563
	Working with the Data: What Is Population Momentum?	544	Appendix II	Instantaneous and Finite Rates	565
	<i>Carrying Capacity of the Earth</i>	545	Appendix III	Species Diversity Measures of Heterogeneity	568
	Working with the Data: How to Calculate an Ecological Footprint	546	Glossary	570	
	Invasive Species	548	Bibliography	581	
	Essay: Why Did the Pleistocene Megafauna Disappear?	550	Credits	625	
	Ecosystem Services	553	Species Index	631	
	Essay: Economics of Ecosystem Services	554	Subject Index	637	
	Essay: Ecological Impacts of Biofuels	555
