Contents

1. Introduction 1

1-1 The Role of Experimental Design 1
1-2 Basic Principles 2
1-3 Historical Perspective 5
1-4 How to Use Statistical Techniques in Experimentation 6

2. Simple Comparative Experiments 9

2-1 Introduction 9
2-2 Basic Statistical Concepts 10
2-3 Sampling and Sampling Distributions 13
2-4 Inferences About the Differences in Means, Randomized Designs 21
2-4.1 Hypothesis Testing 21
2-4.2 Choice of Sample Size 24
2-4.3 Confidence Intervals 26
2-4.4 The Case Where $\sigma_1^2 \neq \sigma_2^2$ 28
2-4.5 The Case Where σ_1^2 and σ_2^2 Are Known 29
2-4.6 Comparing a Single Mean to a Specified Value 29
2-4.7 Summary 32
2-5 Inferences About the Difference in Means, Paired Comparison Designs 32
2-5.1 The Paired Comparison Problem 32
2-5.2 Advantages of the Paired Comparison Design 35
2-6 Inferences About Variances of Normal Distributions 36
2-7 Problems 39

3. Experiments to Compare Several Treatments: The Analysis of Variance 43

3-1 Introduction 43
3-2 The One-Way Classification Analysis of Variance 44
3-3 Analysis of the Fixed Effects Model 45
3-3.1 Decomposition of the Total Sum of Squares 46
3-3.2 Statistical Analysis 49
3-3.3 Estimation of the Model Parameters 55
3-3.4 Model Adequacy Checking: Preview 57
3-3.5 The Unbalanced Case 58
3-4 Comparison of Individual Treatment Means 59
3-4.1 Orthogonal Contrasts 60
3-4.2 Scheffé's Method for Comparing All Contrasts 62
3-4.3 Comparing Pairs of Treatment Means 64
3-4.4 Comparing Treatments with a Control 70
3-5 The Random Effects Model 71
3-6 Sample Computer Output 78
3-7 Problems 80

4. More About the One-Way Model 85

4-1 Model Adequacy Checking 85
4-1.1 The Normality Assumption 86
4-1.2 Plot of Residuals in Time Sequence 89
4-1.3 Plot of Residuals Versus Fitted Values $\hat{y}_{ij}$ 90
4-1.4 Selecting a Variance Stabilizing Transformation 93
4-1.5 Plot of Residuals Versus Other Variables 98
4-2 Choice of Sample Size 99
4-2.1 Operating Characteristic Curves 99
4-2.2 Specifying a Standard Deviation Increase 103
4-2.3 Confidence Interval Estimation Method 104
4-3 Fitting Response Curves in the One-Way Model 105
4-3.1 General Regression Approach 105
4-3.2 Orthogonal Polynomials 107
4-4 The Regression Approach to Analysis of Variance 110
4-5 Nonparametric Methods in the Analysis of Variance 116
4-5.1 The Kruskal-Wallis Test 116
4-5.2 General Comments on the Rank Transformation 117
4-6 Repeated Measures 118
4-7 Problems 121

5. Randomized Blocks, Latin Squares, and Related Designs 123

5-1 The Randomized Complete Block Design 123
5-1.1 Statistical Analysis 124

5-1.2 Model Adequacy Checking 136
5-1.3 Estimating Missing Values 139
5-1.4 Estimating Model Parameters and the General Regression Significance Test 141
5-1.5 Sample Computer Output 144
5-2 The Latin Square Design 146
5-3 The Graeco-Latin Square Design 156
5-4 Problems 160

6. Incomplete Block Designs 165

6-1 Introduction 165
6-2 Balanced Incomplete Block Designs 165
6-2.1 Statistical Analysis 166
6-2.2 Least Squares Estimation of the Parameters 173
6-3 Recovery of Interblock Information in the Balanced Incomplete Block Design 174
6-4 Partially Balanced Incomplete Block Designs 177
6-5 Youden Squares 180
6-6 Lattice Designs 183
6-7 Problems 184

7. Introduction to Factorial Designs 189

7-1 Basic Definitions and Principles 189
7-2 The Advantage of Factorials 192
7-3 The Two-Factor Factorial Design 192
7-3.1 Statistical Analysis of the Fixed Effects Model 194
7-3.2 Model Adequacy Checking 201
7-3.3 Estimating the Model Parameters 206
7-3.4 Choice of Sample Size 208
7-3.5 The Assumption of No Interaction in a Two-Factor Model 210
7-3.6 One Observation per Cell 211
7-4 Random and Mixed Models 215
7-4.1 The Random Effects Model 215
7-4.2 Mixed Models 218
7-4.3 Choice of Sample Size 223
7-5 The General Factorial Design 223
7-6 Fitting Response Curves and Surfaces 229
7-7 Dealing with Unbalanced Data 236
7-7.1 Proportional Data: An Easy Case 237
7-7.2 Approximate Methods 238
7-7.3 The Exact Method 240
7-8 Problems 241

8. Rules for Sums of Squares and Expected Mean Squares 247

8-1 Rules for Sums of Squares 247
8-2 Rules for Expected Mean Squares 250
8-3 Approximate *F* Tests 254
8-4 Problems 259

9. 2^k and 3^k Factorial Designs 261

9-1 Introduction 261
9-2 Analysis of the 2^k Factorial Design 261
9-2.1 The 2^2 Design 262
9-2.2 The 2^3 Design 266
9-2.3 The General 2^k Design 271
9-2.4 A Single Replicate of the 2^k Design 273
9-2.5 Yates' Algorithm for the 2^k Design 280
9-3 Analysis of the 3^k Factorial Design 281
9-3.1 Notation for the 3^k Series 281
9-3.2 The 3^2 Design 281
9-3.3 The 3^3 Design 284
9-3.4 The General 3^k Design 289
9-3.5 Yates' Algorithm for the 3^k Design 290
9-4 Problems 292

10. Confounding 299

10-1 Introduction 299
10-2 Confounding in the 2^k Factorial Design 299
10-2.1 The 2^k Factorial Design in Two Blocks 300
10-2.2 The 2^k Factorial Design in Four Blocks 306
10-2.3 The 2^k Factorial Design in 2^p Blocks 308
10-3 Confounding in the 3^k Factorial Design 311
10-3.1 The 3^k Factorial Design in Three Blocks 311
10-3.2 The 3^k Factorial Design in Nine Blocks 315
10-3.3 The 3^k Factorial Design in 3^p Blocks 317
10-4 Partial Confounding 317
10-5 Other Confounding Systems 321
10-6 Problems 323

11. Fractional Factorial Designs 325

11-1 Introduction 325
11-2 Fractional Replication of the 2^k Factorial Design 325
11-2.1 The One-Half Fraction of the 2^k Design 326
11-2.2 The One-Quarter Fraction of the 2^k Design 335
11-2.3 The General 2^{k-p} Fractional Factorial Design 337

11-2.4 Designs of Resolution III 340
11-2.5 Designs of Resolution IV and V 347
11-3 Fractional Replication of the 3^k Factorial Design 349
11-3.1 The One-Third Fraction of the 3^k Design 349
11-3.2 Other 3^{k-p} Fractional Factorial Designs 352
11-4 Problems 354

12. Nested or Hierarchial Designs 357

12-1 Introduction 357
12-2 The Two-Stage Nested Design 358
12-2.1 Statistical Analysis 358
12-2.2 Estimation of the Model Parameters 363
12-2.3 Diagnostic Checking 366
12-3 The General *m*-Stage Nested Design 368
12-4 Designs with Nested and Crossed Factors 370
12-5 Problems 374

13. Multifactor Experiments with Randomization Restrictions 379

13-1 Randomized Blocks and Latin Squares as Multifactor Designs 379
13-2 The Split-Plot Design 386
13-3 The Split-Split Plot Design 391
13-4 Problems 395

14. Regression Analysis 399

14-1 Introduction 399
14-2 Simple Linear Regression 400
14-3 Hypothesis Testing in Simple Linear Regression 407
14-4 Interval Estimation in Simple Linear Regression 410
14-5 Model Adequacy Checking 414
14-5.1 Residual Analysis 414
14-5.2 The Lack-of-Fit Test 416
14-5.3 The Coefficient of Determination 419
14-6 Multiple Linear Regression 420
14-7 Hypothesis Testing in Multiple Linear Regression 429
14-8 Other Linear Regression Models 435
14-9 Sample Computer Printout 438
14-10 Problems 440

15. Response Surface Methodology 445

15-1 Introduction 445
15-2 The Method of Steepest Ascent 447
15-3 Analysis of Quadratic Models 453

15-4 Response Surface Designs 460
15-4.1 Designs for Fitting the First-Order Model 460
15-4.2 Designs for Fitting the Second-Order Model 462
15-5 Evolutionary Operation 463
15-6 Problems 470

16. Analysis of Covariance **475**

16-1 Introduction 475
16-2 One-Way Classification with a Single Covariate 476
16-3 Development by the General Regression Significance Test 490
16-4 Other Covariance Models 493
16-5 Problems 495

Bibliography **499**

Appendix **505**

Table I. Cumulative Standard Normal Distribution 506
Table II. Percentage Points of the t Distribution 508
Table III. Percentage Points of the χ^2 Distribution 509
Table IV. Percentage Points of the F Distribution 510
Table V. Operating Characteristic Curves for the Fixed Effects Model Analysis of Variance 515
Table VI. Operating Characteristic Curves for the Random Effects Model Analysis of Variance 519
Table VII. Significant Ranges for Duncan's Multiple Range Test 523
Table VIII. Percentage Points of the Studentized Range Statistic 525
Table IX. Critical Values for Dunnett's Test for Comparing Treatments with a Control 527
Table X. Coefficients of Orthogonal Polynomials 531
Table XI. Random Numbers 532
