Preface	xi
Acknowledgments	xiii
1 Data: Types and Presentation	1
1.1 Types of Biological Data	2
1.2 Accuracy and Significant Figures	5
1.3 Frequency Distributions	6
1.4 Cumulative Frequency Distributions	14
2 Populations and Samples	16
2.1 Populations	16
2.2 Samples from Populations	16
2.3 Random Sampling	17
2.4 Parameters and Statistics	18
2.5 Outliers	19
3 Measures of Central Tendency	21
3.1 The Arithmetic Mean	21
3.2 The Median	24
3.3 The Mode	27
3.4 Other Measures of Central Tendency	28
3.5 Coding Data	30
4 Measures of Variability and Dispersion	33
4.1 The Range	33
4.2 Dispersion Measured with Quantiles	35
4.3 The Mean Deviation	37
4.4 The Variance	37
4.5 The Standard Deviation	41
4.6 The Coefficient of Variation	42
4.7 Indices of Diversity	42
4.8 Coding Data	46
5 Probabilities	49
5.1 Counting Possible Outcomes	49
5.2 Permutations	51
5.3 Combinations	55
5.4 Sets	57
5.5 Probability of an Event	59
5.6 Adding Probabilities	60
5.7 Multiplying Probabilities	63
5.8 Conditional Probabilities	63
6 The Normal Distribution	66
6.1 Proportions of a Normal Distribution	68
6.2 The Distribution of Means	72

6.3	Introduction to Statistical Hypothesis Testing	7
6.4	Confidence Limits	8
6.5	Symmetry and Kurtosis	8
6.6	Assessing Departures from Normality	9
7	One-Sample Hypotheses	9
7.1	Two-Tailed Hypotheses Concerning the Mean	9
7.2	One-Tailed Hypotheses Concerning the Mean	10
7.3	Confidence Limits for the Population Mean	10
7.4	Reporting Variability Around the Mean	10
7.5	Reporting Variability Around the Median	11
7.6	Sample Size and Estimation of the Population Mean	11
7.7	Sample Size, Detectable Difference, and Power in Tests Concerning the Mean	11
7.8	Sampling Finite Populations	11
7.9	Hypotheses Concerning the Median	12
7.10	Confidence Limits for the Population Median	12
7.11	Hypotheses Concerning the Variance	12
7.12	Confidence Limits for the Population Variance	12
7.13	Power and Sample Size in Tests Concerning the Variance	12
7.14	Hypotheses Concerning the Coefficient of Variation	12
7.15	Confidence Limits for the Population Coefficient of Variation	12
7.16	Hypotheses Concerning Symmetry and Kurtosis	12
8	Two-Sample Hypotheses	13
8.1	Testing for Difference Between Two Means	13
8.2	Confidence Limits for Population Means	14
8.3	Sample Size and Estimation of the Difference Between Two Population Means	14
8.4	Sample Size, Detectable Difference, and Power in Tests for Difference between Two Means	14
8.5	Testing for Difference Between Two Variances	15
8.6	Confidence Limits for Population Variances and the Population Variance Ratio	15
8.7	Sample Size and Power in Tests for Difference Between Two Variances	15
8.8	Testing for Difference Between Two Coefficients of Variation	15
8.9	Confidence Limits for the Difference Between Two Coefficients of Variation	16
8.10	Nonparametric Statistical Methods	16
8.11	Two-Sample Rank Testing	16
8.12	Testing for Difference Between Two Medians	17
8.13	Two-Sample Testing of Nominal-Scale Data	17
8.14	Testing for Difference Between Two Diversity Indices	17
8.15	Coding Data	17
9	Paired-Sample Hypotheses	179
9.1	Testing Mean Difference Between Paired Samples	179
9.2	Confidence Limits for the Population Mean Difference	182
9.3	Power, Detectable Difference and Sample Size in Paired-Sample Testing of Means	182

9.4	Testing for Difference Between Variances from Two Correlated Populations	182
9.5	Paired-Sample Testing by Ranks	183
9.6	Confidence Limits for the Population Median Difference	188
10	Multisample Hypotheses and the Analysis of Variance	189
10.1	Single-Factor Analysis of Variance	190
10.2	Confidence Limits for Population Means	206
10.3	Sample Size, Detectable Difference, and Power in Analysis of Variance	207
10.4	Nonparametric Analysis of Variance	214
10.5	Testing for Difference Among Several Medians	219
10.6	Homogeneity of Variances	220
10.7	Homogeneity of Coefficients of Variation	221
10.8	Coding Data	224
10.9	Multisample Testing for Nominal-Scale Data	224
11	Multiple Comparisons	226
11.1	Testing All Pairs of Means	227
11.2	Confidence Intervals for Multiple Comparisons	232
11.3	Testing a Control Mean Against Each Other Mean	234
11.4	Multiple Contrasts	237
11.5	Nonparametric Multiple Comparisons	239
11.6	Nonparametric Multiple Contrasts	243
11.7	Multiple Comparisons Among Medians	244
11.8	Multiple Comparisons Among Variances	244
12	Two-Factor Analysis of Variance	249
12.1	Two-Factor Analysis of Variance with Equal Replication	250
12.2	Two-Factor Analysis of Variance with Unequal Replication	265
12.3	Two-Factor Analysis of Variance Without Replication	267
12.4	Two-Factor Analysis of Variance with Randomized Blocks or Repeated Measures	270
12.5	Multiple Comparisons and Confidence Intervals in Two-Factor Analysis of Variance	274
12.6	Sample Size, Detectable Difference, and Power in Two-Factor Analysis of Variance	275
12.7	Nonparametric Randomized-Block or Repeated-Measures Analysis of Variance	277
12.8	Dichotomous Nominal-Scale Data in Randomized Blocks or from Repeated Measures	281
12.9	Multiple Comparisons with Dichotomous Randomized-Block or Repeated-Measures Data	283
12.10	Introduction to Analysis of Covariance	284
13	Data Transformations	286
13.1	The Logarithmic Transformation	287
13.2	The Square-Root Transformation	291
13.3	The Arcsine Transformation	291
13.4	Other Transformations	295

14 Multiway Factorial Analysis of Variance	2
14.1 Three-Factor Analysis of Variance	2
14.2 The Latin-Square Experimental Design	2
14.3 Higher-Order Factorial Analysis of Variance	3
14.4 Multiway Analysis of Variance with Blocks or Repeated Measures	3
14.5 Factorial Analysis of Variance with Unequal Replication	3
14.6 Multiple Comparisons and Confidence Intervals in Multiway Analysis of Variance	3
14.7 Power, Detectable Difference, and Sample Size in Multiway Analysis of Variance	3
15 Nested (Hierarchical) Analysis of Variance	3
15.1 Nesting Within One Factor	3
15.2 Nesting in Factorial Experimental Designs	3
15.3 Multiple Comparisons and Confidence Intervals	3
15.4 Power, Detectable Difference, and Sample Size in Nested Analysis of Variance	3
16 Multivariate Analysis of Variance	31
16.1 The Multivariate Normal Distribution	31
16.2 Multivariate Analysis of Variance Hypothesis Testing	31
16.3 Further Analysis	32
16.4 Other Experimental Designs	32
17 Simple Linear Regression	32
17.1 Regression versus Correlation	32
17.2 The Simple Linear Regression Equation	33
17.3 Testing the Significance of a Regression	33
17.4 Interpretations of Regression Functions	34
17.5 Confidence Intervals in Regression	34
17.6 Inverse Prediction	34
17.7 Regression with Replication and Testing for Linearity	34
17.8 Power and Sample Size in Regression	35
17.9 Regression Through the Origin	35
17.10 Data Transformations in Regression	35
17.11 The Effect of Coding Data	36
18 Comparing Simple Linear Regression Equations	36
18.1 Comparing Two Slopes	36
18.2 Comparing Two Elevations	36
18.3 Comparing Points on Two Regression Lines	37
18.4 Comparing More Than Two Slopes	37
18.5 Comparing More Than Two Elevations	37
18.6 Multiple Comparisons Among Slopes	37
18.7 Multiple Comparisons Among Elevations	37
18.8 Multiple Comparisons of Points Among Regression Lines	37
18.9 An Overall Test for Coincidental Regressions	37
19 Simple Linear Correlation	37
19.1 The Correlation Coefficient	37
19.2 Hypotheses About the Correlation Coefficient	38

19.3	Confidence Intervals for the Population Correlation Coefficient . .	386
19.4	Power and Sample Size in Correlation	386
19.5	Comparing Two Correlation Coefficients	390
19.6	Power and Sample Size in Comparing Two Correlation Coefficients	392
19.7	Comparing More Than Two Correlation Coefficients	393
19.8	Multiple Comparisons Among Correlation Coefficients	396
19.9	Rank Correlation	398
19.10	Weighted Rank Correlation	402
19.11	Correlation with Nominal-Scale Data	405
19.12	Intraclass Correlation	411
19.13	Concordance Correlation	414
19.14	The Effect of Coding	417
20	Multiple Regression and Correlation	419
20.1	Intermediate Computational Steps	420
20.2	The Multiple-Regression Equation	423
20.3	Analysis of Variance of Multiple Regression or Correlation	426
20.4	Hypotheses Concerning Partial Regression Coefficients	430
20.5	Standardized Partial Regression Coefficients	433
20.6	Selecting Independent Variables	433
20.7	Partial Correlation	438
20.8	Predicting Y Values	440
20.9	Testing Difference Between Two Partial Regression Coefficients	442
20.10	"Dummy" Variables	443
20.11	Interaction of Independent Variables	444
20.12	Comparing Multiple Regression Equations	444
20.13	Multiple Regression Through The Origin	446
20.14	Nonlinear Regression	447
20.15	Descriptive Versus Predictive Models	448
20.16	Concordance: Rank Correlation Among Several Variables	449
21	Polynomial Regression	458
21.1	Polynomial Curve Fitting	458
21.2	Quadratic Regression	463
22	Testing for Goodness of Fit	466
22.1	Chi-Square Goodness of Fit for Two Categories	467
22.2	Chi-Square Correction for Continuity	469
22.3	Chi-Square Goodness of Fit for More Than Two Categories	470
22.4	Subdividing Chi-Square Goodness of Fit	472
22.5	Chi-Square Goodness of Fit with Small Frequencies	473
22.6	Heterogeneity Chi-Square Testing for Goodness of Fit	474
22.7	The Log-Likelihood Ratio for Goodness of Fit	478
22.8	Kolmogorov-Smirnov Goodness of Fit	481
23	Contingency Tables	490
23.1	Chi-Square Analysis of Contingency Tables	492
23.2	Visualizing Contingency-Table Data	494

23.3	2×2 Contingency Tables	4
23.4	Contingency Tables with Small Frequencies	5
23.5	Heterogeneity Testing of 2×2 Tables	5
23.6	Subdividing Contingency Tables	5
23.7	The Log-Likelihood Ratio for Contingency Tables	5
23.8	Multidimensional Contingency Tables	5
24	Dichotomous Variables	5
24.1	Binomial Probabilities	5
24.2	The Hypergeometric Distribution	5
24.3	Sampling a Binomial Population	5
24.4	Goodness of Fit for the Binomial Distribution	5
24.5	The Binomial Test and One-Sample Test of a Proportion	5
24.6	The Sign Test	5
24.7	Power, Detectable Difference, and Sample Size for the Binomial and Sign Tests	5
24.8	Confidence Limits for a Population Proportion	5
24.9	Confidence Interval for a Population Median	5
24.10	Testing for Difference Between Two Proportions	5
24.11	Confidence Limits for the Difference Between Proportions	5
24.12	Power, Detectable Difference, and Sample Size in Testing Difference Between Two Proportions	5
24.13	Comparing More Than Two Proportions	5
24.14	Multiple Comparisons for Proportions	5
24.15	Trends Among Proportions	5
24.16	The Fisher Exact Test	56
24.17	Paired-Sample Testing of Nominal-Scale Data	56
24.18	Logistic Regression	57
25	Testing for Randomness	58
25.1	Poisson Probabilities	58
25.2	Confidence Limits for the Poisson Parameter	58
25.3	Goodness of Fit for the Poisson Distribution	58
25.4	The Poisson Distribution for the Binomial Test	59
25.5	Comparing Two Poisson Counts	59
25.6	Serial Randomness of Nominal-Scale Categories	59
25.7	Serial Randomness of Measurements: Parametric Testing	59
25.8	Serial Randomness of Measurements: Nonparametric Testing	60
26	Circular Distributions: Descriptive Statistics	60
26.1	Data on a Circular Scale	60
26.2	Graphical Presentation of Circular Data	60
26.3	Trigonometric Functions	61
26.4	The Mean Angle	61
26.5	Angular Dispersion	61
26.6	The Median and Modal Angles	61
26.7	Confidence Limits for the Population Mean and Median Angles	61
26.8	Axial Data	61
26.9	The Mean of Mean Angles	62

27 Circular Distributions: Hypothesis Testing	624
27.1 Testing Significance of the Mean Angle	624
27.2 Testing Significance of the Median Angle	629
27.3 Testing Symmetry Around the Median Angle	631
27.4 Two-Sample and Multisample Testing of Mean Angles	632
27.5 Nonparametric Two-Sample and Multisample Testing of Angles . .	637
27.6 Two-Sample and Multisample Testing of Median Angles	642
27.7 Two-Sample and Multisample Testing of Angular Distances	642
27.8 Two-Sample and Multisample Testing of Angular Dispersion	644
27.9 Parametric Analysis of the Mean of Mean Angles	645
27.10 Nonparametric Analysis of the Mean of Mean Angles	646
27.11 Parametric Two-Sample Analysis of the Mean of Mean Angles . . .	647
27.12 Nonparametric Two-Sample Analysis of the Mean of Mean Angles	649
27.13 Parametric Paired-Sample Testing with Angles	652
27.14 Nonparametric Paired-Sample Testing with Angles	654
27.15 Parametric Angular Correlation and Regression	654
27.16 Nonparametric Angular Correlation	660
27.17 Goodness-of-Fit Testing for Circular Distributions	662
27.18 Serial Randomness of Nominal-Scale Categories on a Circle	665

APPENDICES

A The Greek Alphabet	669
B Statistical Tables and Graphs	671
Table B.1 Critical Values of the Chi-Square (χ^2) Distribution	672
Table B.2 Proportions of the Normal Curve (One-Tailed)	676
Table B.3 Critical Values of the t Distribution	678
Table B.4 Critical Values of the F Distribution	680
Table B.5 Critical Values of the q Distribution, for the Tukey Test . . .	717
Table B.6 Critical Values of q' for the One-Tailed Dunnett's Test . . .	733
Table B.7 Critical Values of q' for the Two-Tailed Dunnett's Test . . .	735
Table B.8 Critical Values of $d_{\max}$ for the Kolmogorov-Smirnov Goodness-of-Fit for Discrete or Grouped Data	736
Table B.9 Critical Values of D for the Kolmogorov-Smirnov Goodness-of-Fit Test for Continuous Distributions	741
Table B.10 Critical Values of D_δ for the δ -Corrected Kolmogorov-Smirnov Goodness-of-Fit Test for Continuous Distributions	745
Table B.11 Critical Values of the Mann-Whitney U Distribution	747
Table B.12 Critical Values of the Wilcoxon T Distribution	758
Table B.13 Critical Values of the Kruskal-Wallis H Distribution	761
Table B.14 Critical Values of the Friedman χ_r^2 Distribution	763
Table B.15 Critical Values of Q for Nonparametric Multiple-Comparison Testing	764
Table B.16 Critical Values of Q' for Nonparametric Multiple-Comparison Testing with a Control	765
Table B.17 Critical Values of the Correlation Coefficient, r	766
Table B.18 Fisher's z Transformation for Correlation Coefficients, r . . .	768

Table B.19	Correlation Coefficients, r , Corresponding to Fisher's z Transformation	
Table B.20	Critical Values of the Spearman Rank-Correlation Coefficient, r_s	
Table B.21	Critical Values of the Top-Down Correlation Coefficient, r_T	
Table B.22	Critical Values of the Symmetry Measure, $\sqrt{b_1}$	
Table B.23	Critical Values of the Kurtosis Measure, b_2	
Table B.24	The Arcsine Transformation, p'	
Table B.25	Proportions, p , Corresponding to Arcsine Transformations, p'	
Table B.26a	Binomial Coefficients, ${}_nC_X$	
Table B.26b	Proportions of the Binomial Distribution for $p = q = 0.5$	
Table B.27	Critical Values of C for the Sign Test or the Binomial Test with $p = 0.5$	
Table B.28	Critical Values for Fisher's Exact Test	
Table B.29	Critical Values of u for the Runs Test	
Table B.30	Critical Values of C for the Mean Square Successive Difference Test	
Table B.31	Critical Values, u , for the Runs-Up-and-Down Test	
Table B.32	Angular Deviation, s , As a Function of Vector Length, r	
Table B.33	Circular Standard Deviation, s_0 , as a Function of Vector Length, r	
Table B.34	Circular Values of z for Rayleigh's Test for Circular Uniformity	
Table B.35	Critical Values of u for the V Test of Circular Uniformity	
Table B.36	Critical Values of m for the Hodges-Ajne Test for Circular Uniformity	
Table B.37	Correction Factor, K , for the Watson and Williams Test	
Table B.38a	Critical Values of Watson's Two-Sample U^2	
Table B.38b	Critical Values of Watson's One-Sample U^2	
Table B.39	Critical Values of R' for the Moore Test for Circular Uniformity	
Table B.40	Common Logarithms of Factorials	
Table B.41	Ten Thousand Random Digits	
Figure B.1	Power and Sample Size in Analysis of Variance	
C	The Effects of Coding Data	86
D	Analysis-of-Variance Hypothesis Testing	86
D.1	Determination of Appropriate F s and Degrees of Freedom	86
D.2	Two-Factor Analysis of Variance	87
D.3	Three-Factor Analysis of Variance	87
D.4	Nested Analysis of Variance	87
	Answers to Exercises	87
	Literature Cited	88
	Author Index	92
	Subject Index	93
