Preface

<i>Avshalom Mizrahi</i>	xi
-----------------------------------	-----------

Secondary Products From Plant Cell Culture

A.J. Parr

I. Cell Cultures and Synthesis of Secondary Products	2
II. Improving Productivity by Manipulating Cellular Environments	7
A. Hormone Regime	7
B. Nutrient Regime	9
C. Elicitors	10
D. Supply of Precursors	11
E. Medium pH	12
F. Levels of Oxygen, Carbon Dioxide, etc.	13
G. Temperature	13
H. Light	13
III. Genetic Variation as a Source of Enhanced Productivity	15
A. Screening	16
B. Selection	18
C. Genetic Manipulation	20
IV. Exploitation Systems	21
A. Fermenter Systems for Growing Biomass	21
1. Free Cell Reactors	21
2. Immobilized Cell Reactors	21
3. Transformed Root Cultures	22
B. Harvesting of Products	22
1. Products Spontaneously Released to Medium	22
2. Products Not Normally Released to Medium	24
V. Conclusions	25

Growth Control in Plant Tissue Cultures

Andrew Goldsworthy

I. Differentiation	36
II. Chemical Control Signals	37
A. The Evolution of Chemical Signals	37
B. Morphogens and Cell Differentiation	39
C. Growth Hormones and Strategic Control	40
D. Mechanisms of Action	40
III. The Regeneration of Plantlets	41
A. Somatic Embryogenesis	41
B. Organogenesis	41

vi ◇ Contents

IV. Polarity	42
A. The Electrical Control of Polarity	42
B. The Generation of Natural Currents	43
C. The Evolution of Transcellular Currents	44
D. The Mechanisms of Action	45
E. Natural Currents in Multicellular Structures	45
F. Polarity in Callus Cultures	46
V. Experiments With Artificial Currents in Tissue Cultures	46
A. The Biological Material	46
B. Electrical Treatment	46
C. The Stimulation of Shoot Formation	48
D. The Stimulation of Callus Growth	49
E. The Mechanism of Cell Alignment	49
VI. Possible Applications	50
A. Enhanced Plantlet Regeneration	50
B. Increased Genetic Stability	50
C. Enhanced Secondary Product Synthesis	51

Somatic Embryogenesis and Polyembryogenesis in Conifers

D.J. Durzan and Pramod K. Gupta

I. Background	55
A. Historical Aspects	55
B. Somatic Polyembryogenesis	57
C. Model Processes and Strategies	62
1. Heritability	62
2. Selection Differential	62
3. Embryonic/Juvenile/Mature Correlations	62
4. Generation Integral	63
II. Process Sequences (S.P.E.)	65
A. General Sequence	65
B. Culture Conditions	67
C. Histological and Cytochemical Staining	68
D. Encapsulation and Freeze Preservation of Somatic Embryos	69
III. Applications	69
A. Artificial Seeds	69
B. Germplasm Storage and Preservation	70
C. Germplasm Enhancement	70
D. Seed Orchards	71
E. Biotechnology and the Life Cycle of Trees	72
F. Somatic and Reproductive Cell Genetics	76
IV. Prospects	76
V. Glossary	79

Virus Detection in Squash-Blots of Plants and Insects: Applications in Diagnostics, Epidemiology, and Breeding

Henryk Czosnek and Nir Navot

I. Need for Improved Diagnostic Tools	84
II. Detection of Virus in Squash-Blots	85
A. Detection of Virus Nucleic Acids in Leaf Squashes	85
B. Specificity of Detection With the Viral Probe	86
C. Distribution of Virus in the Plant Tissues	86

D. Squash-Blots Can Be Used to Detect DNA as Well as RNA Viruses	88
E. Detection of Virus in Squashes of Insect Carriers	89
III. Advantages of Squash-Blots Over Other Virus Detection Techniques	90
A. Simplicity	91
B. Sensitivity and Specificity	91
C. Rapidity	91
D. Stability	91
IV. Potential Uses of Squash-Blots	92
A. Epidemiological Studies	92
B. Mapping Viral Diseases Worldwide	92
C. Breeding for Virus Resistance	93
D. Quality Control	93
V. Conclusions	93

Alkaloid Production by Plant Cell Cultures

C.A. Hay, L.A. Anderson, M.F. Roberts, and J.D. Phillipson

I. Alkaloids Produced by Plant Cell Cultures	99
A. Tryptophan-Derived Alkaloids	99
B. Tyrosine-Derived Alkaloids	105
C. Lysine-Derived Quinolizidine Alkaloids	110
D. Ornithine-Derived Tropane Alkaloids	111
E. i) Nicotinic-Acid-Derived and ii) Purine Alkaloids	113
F. Anthranilic-Acid-Derived Alkaloids	114
G. Acetate-Derived Alkaloids	114
II. Studies on Alkaloid Biosynthesis Using Plant Cell Cultures	115
III. Localization of Alkaloids in Plant Cell Cultures	121
IV. Conclusions	124

Potential for Exploiting Vesicular-Arbuscular Mycorrhizas in Agriculture

I.R. Hall

I. Pot Experiments	144
II. Field Experiments	144
A. Field-Sown Crops and Pastures	145
1. Soils With Low VAM Inoculum Potentials	146
2. Pastures	148
3. Field-Sown Crops	150
B. Transplanted Crops—Seedlings Raised in "Sterile" Media	150
C. Transplanted Crops—Seedlings Raised in Unsterile Soils	154
D. Persistence of Responses to VAM Inocula	155
E. Failures of VAM Inocula to Produce Growth Responses	157
III. Selection of VAM Fungi	158
IV. Inocula and Inoculum Production	160
V. Conclusions and Future Research	161
A. Field-Sown Crops and Pastures	162
B. Transplanted Crops	162

Electric Gene Transfer Into Plant Protoplasts and Cells

Hiromichi Morikawa, Asako Iida, and Yasuyuki Yamada

I. Electrofusion	175
A. Introduction	175
B. Background	176

viii ♦ Contents

C. Advances in Studies on Somatic Hybridization by Electrofusion in Plants	180
D. Production of Fertile Somatic Hybrid Plants by Electrofusion	183
II. Electroporation and Electroinjection	186
A. Introduction	186
B. Advances in Studies on Electroporation and Electroinjection	187
C. Electroinjection of Plasmid DNA Into Intact Yeast Cells	194
D. Electroinjection of Viral RNA Into Free Cells of Tobacco	195

Applications of Somaclonal Variation

David A. Evans

I. Terminology	204
II. Review of Literature	205
III. Tomato Improvement	208
IV. Development of New Ornamentals	213
V. Plants From Protoplasts and Fusion Products	216
VI. Implications for Breeding	220
VII. Summary	220

Encapsulated Plant Embryos

Keith Redenbaugh, Jo Ann Fujii, and David Slade

I. Artificial Seeds	226
A. Potential of Artificial Seeds	226
1. Applications	226
2. Crops	226
3. Advantages of the Capsule	228
B. Definition of Artificial Seeds	228
C. Fundamental Problem	229
II. Historical Development and Current Progress of Artificial Seeds	229
A. Fluid Drilling	230
B. Desiccated Coatings	231
C. Hydrogels	231
D. Other Techniques	234
E. Patents	234
F. Directions for Artificial Seed Research	235
III. Methods for Hydrogel Encapsulation of Plant Embryos	235
A. Capsule System	235
B. Artificial Endosperm	237
C. Hydrophobic Coatings	237
IV. Somatic Embryogeny	238
A. Alfalfa Somatic Embryogeny	239
B. Embryo Maturation	240
C. Problems With Encapsulated Embryos	241
V. Commercialization Requirements for Artificial Seeds	242
A. Control of Somaclonal Variation	242
B. Capsule Storage	242
C. Bioreactor Production	243
D. Commercialization	244
VI. Conclusions	245
