Preface

v

1	Equilibrium Electrochemistry and the Nernst Equation	1
1.1	Chemical Equilibrium	1
1.2	Electrochemical Equilibrium: Introduction	5
1.3	Electrochemical Equilibrium: Electron Transfer at the Solution–Electrode Interface	9
1.4	Electrochemical Equilibrium: The Nernst Equation	11
1.5	Walther Hermann Nernst	17
1.6	Reference Electrodes and the Measurement of Electrode Potentials	19
1.7	The Hydrogen Electrode as a Reference Electrode	26
1.8	Standard Electrode Potentials and Formal Potentials	27
1.9	Formal Potentials and Experimental Voltammetry	30
1.10	Electrode Processes: Kinetics vs. Thermodynamics	32
2	Electrode Kinetics	35
2.1	Currents and Reaction Fluxes	35
2.2	Studying Electrode Kinetics Requires Three Electrodes	37
2.3	Butler–Volmer Kinetics	40
2.4	Standard Electrochemical Rate Constants and Formal Potentials	43
2.5	The Need for Supporting Electrolyte	45
2.6	The Tafel Law	46
2.7	Julius Tafel	47
2.8	Multistep Electron Transfer Processes	49
2.9	Tafel Analysis and the Hydrogen Evolution Reaction	52
2.10	B. Stanley Pons	57
2.11	Cold Fusion—The Musical!	58

2.12	Why are Some Standard Electrochemical Rate Constants Large but Others Slow? The Marcus Theory of Electron Transfer: An Introduction	60
2.13	Marcus Theory: Taking it Further. Inner and Outer Sphere Electron Transfer	66
2.14	Marcus Theory: Taking it Further. Adiabatic and Non-Adiabatic Reactions	67
2.15	Marcus Theory: Taking it Further. Calculating the Gibbs Energy of Activation	70
2.16	Relationship between Marcus Theory and Butler–Volmer Kinetics	73
2.17	Marcus Theory and Experiment. Success!	74
3	Diffusion	77
3.1	Fick's 1st Law of Diffusion	77
3.2	Fick's 2nd Law of Diffusion	79
3.3	The Molecular Basis of Fick's Laws	81
3.4	How Did Fick Discover His Laws?	83
3.5	The Cottrell Equation: Solving Fick's 2nd Law	88
3.6	The Cottrell Problem: The Case of Unequal Diffusion Coefficients	92
3.7	The Nernst Diffusion Layer	94
3.8	Mass Transfer vs. Electrode Kinetics: Steady-State Current-Voltage Waveshapes	97
3.9	Mass Transport Corrected Tafel Relationships	100
4	Cyclic Voltammetry at Macroelectrodes	107
4.1	Cyclic Voltammetry: The Experiment	107
4.2	Cyclic Voltammetry: Solving the Transport Equations	109
4.3	Cyclic Voltammetry: Reversible and Irreversible Kinetics	111
4.4	What Dictates 'Reversible' and 'Irreversible' Behaviour?	119
4.5	Reversible and Irreversible Behaviour: The Effect of Voltage Scan Rate	120
4.6	Reversible versus Irreversible Voltammetry: A Summary	126
4.7	The Measurement of Cyclic Voltammograms: Three Practical Considerations	127
4.8	The Effect of Unequal Diffusion Coefficients, $D_A \neq D_R$	129
4.9	Multiple Electron Transfer: Reversible Electrode Kinetics	133
4.10	Multiple Electron Transfer: Irreversible Electrode Kinetics	142
4.11	The Influence of pH on Cyclic Voltammetry	147

5	Voltammetry at Microelectrodes	153
5.1	The Cottrell Equation for a Spherical or Hemispherical Electrode	153
5.2	Potential Step Transients at Microdisc Electrodes	158
5.3	Microelectrodes have Large Current Densities and Fast Response Times	159
5.4	Applications of Potential Step Chronoamperometry Using Microdisc Electrodes	161
5.5	Double Potential Step Microdisc Chronoamperometry Exploring the Diffusion Coefficient of Electrogenenerated Species	164
5.6	Cyclic and Linear Sweep Voltammetry Using Microdisk Electrodes	172
5.7	Steady-State Voltammetry at the Microdisc Electrode	182
5.8	Microelectrodes versus Macroelectrodes	183
5.9	Ultrafast Cyclic Voltammetry: Megavolts per Second Scan Rates	187
5.10	Ultrasmall Electrodes: Working at the Nanoscale	188
6	Voltammetry at Heterogeneous Surfaces	193
6.1	Partially Blocked Electrodes	193
6.2	Microelectrode Arrays	209
6.3	Voltammetry at Highly Ordered Pyrolytic Graphite Electrodes	215
6.4	Electrochemically Heterogeneous Electrodes	219
6.5	Electrodes Covered with Porous Films	222
6.6	Voltammetric Particle Sizing	224
6.7	Scanning Electrochemical Microscopy (SECM)	228
7	Cyclic Voltammetry: Coupled Homogeneous Kinetics and Adsorption	233
7.1	Homogeneous Coupled Reactions: Notation and Examples	233
7.2	Modifying Fick's Second Law to Allow for Chemical Reaction	235
7.3	Cyclic Voltammetry and the EC Reaction	236
7.4	How Do The Parameters K_1 and Λ Emerge?	240
7.5	Cyclic Voltammetry and the EC_2 Reaction	243
7.6	Examples of EC and EC_2 Processes	246
7.7	ECE Processes	254
7.8	ECE vs DISP	262
7.9	The CE Mechanism	264
7.10	The EC' (Catalytic) Mechanism	266
7.11	Adsorption	268
7.12	Voltammetric Studies of Droplets and Solid Particles	277

8	Hydrodynamic Electrodes	285
8.1	Convection	285
8.2	Modifying Fick's Law to Allow for Convection	287
8.3	The Rotating Disc Electrode: An Introduction	288
8.4	The Rotating Disc Electrode — Theory	289
8.5	Osborne Reynolds (1842–1912)	293
8.6	The Rotating Disc Electrode — Further Theory	293
8.7	Chronoamperometry at the Rotating Disc Electrode: An Illustration of the Value of Simulation	300
8.8	The Rotating Disc and Coupled Homogeneous Kinetics	303
8.9	The Channel Electrode: An Introduction	306
8.10	The Channel Electrode: The Levich Equation Derived	309
8.11	Channel Flow Cells and Coupled Homogeneous Kinetics	310
8.12	Chronoamperometry at the Channel Electrode	316
8.13	The Channel Electrode is not “Uniformly Accessible”	318
8.14	Channel Microelectrodes	319
8.15	Channel Microband Electrode Arrays for Mechanistic Electrochemistry	321
8.16	The High Speed Channel Electrode	325
8.17	Hydrodynamic Electrodes Based on Impinging jets	327
8.18	Sonovoltammetry	329
9	Voltammetry for Electroanalysis	341
9.1	Potential Step Voltammetric Techniques	341
9.2	Differential Pulse Voltammetry	342
9.3	Square Wave Voltammetry	344
9.4	Stripping Voltammetry	345
9.5	Sono-electroanalysis	352
Appendix	Simulation of Electrode Processes	361
A.1	Fick's First and Second Laws	361
A.2	Boundary Conditions	362
A.3	Finite Difference Equations	362
A.4	Backward Implicit Method	363
A.5	Conclusion	365
Index		367
