Foreword	xix
List of Contributors	xxi
1 BIOELECTROCHEMICAL SYSTEMS: A NEW APPROACH TOWARDS ENVIRONMENTAL AND INDUSTRIAL BIOTECHNOLOGY	1
1.1 Fuel cells and bio-electricity	1
1.2 Underlying principles	5
1.2.1 Microorganisms and current	5
1.2.2 Microbial communities in BESS	6
1.2.3 From microbial metabolism to electrical current	7
1.3 Measuring and Defining performance	8
1.3.1 Measuring potentials	9
1.3.2 Rate based performance indicators	10
1.3.3 Efficiency based performance indicators	10
1.4 A plethora of applications	11
1.5 Acknowledgements	12
References	13
2 MICROBIAL ENERGY PRODUCTION FROM BIOMASS	17
2.1 Biomass: solar energy stored in organic material	17
2.2 The energy content of biomass	20
2.3 Bio-alcohol production from biomass	22
2.4 Anaerobic methanogenic digestion: waste stabilization plus renewable energy source	24
2.4.1 Process performance	24

2.4.2	The microbiology of methanogenesis	26
2.4.3	The importance of extracellular electron transfer in AD	27
2.4.4	Application of anaerobic digestion	29
2.4.4.1	Anaerobic Digestion (AD) for solid waste	29
2.4.4.2	AD for wastewater treatment.....	30
2.4.4.3	Overall benefits and constraints of anaerobic digestion.....	32
2.5	Bio-hydrogen production from biomass	34
2.6	Future perspectives	35
	References	36
3	ENZYMATIC FUEL CELLS AND THEIR COMPLEMENTARITIES RELATIVE TO BES/MFC	39
3.1	Introduction	39
3.2	Similarities between types of microbial and enzymatic biofuel cells	43
3.2.1	Bioreactor design	44
3.2.2	<i>In-situ</i> bioreactor style	44
3.2.3	Catalyst in anolyte solution	45
3.2.4	Immobilized catalyst and/or mediator	46
3.2.5	Direct electron transfer catalysts	46
3.3	Catalyst sources for MET and DET systems	47
3.4	Comparison of properties of microbial and enzymatic fuel cells	48
3.5	Enzymes employed in enzymatic biofuel cells	49
3.6	Deep and/or complete oxidation of fuel	52
3.7	Conclusions	52
3.8	Acknowledgements	53
	References	53
4	SHUTTling VIA SOLUBLE COMPOUNDS	59
4.1	Introduction	59
4.2	Redox shuttles	61
4.3	Early experiments	62
4.4	Exogenous redox mediators	63
4.4.1	Artificial mediators	63
4.4.2	Natural redox mediators in the subsurface environment	64

4.5	Endogenous redox mediators	65
4.5.1	Known microbially produced redox mediators	67
4.5.1.1	Phenazines	67
4.5.1.2	Flavins	67
4.5.1.3	Quinones	68
4.5.1.4	Cytochromes and soluble enzymes	69
4.5.1.5	Melanin	69
4.5.1.6	Other mediators	69
4.5.2	Unidentified endogenous mediators	70
4.6	Methods for identification of soluble redox shuttles	70
4.6.1	Potentiostat-controlled electrochemical cells	71
4.6.2	Environmental conditions	71
4.6.3	Batch experiments	71
4.6.4	Media formulation	71
4.6.5	Electrochemical methods	71
4.6.6	Medium change	72
4.6.7	Chemical structure of the mediator	72
4.7	Relevance of soluble redox mediators shuttle to microbial metabolism	72
4.8	Soluble redox shuttles in bioelectrochemical devices	74
4.8.1	Microbial fuel cells	74
4.8.1.1	Biosensors	74
4.8.1.2	Electrodes modified with redox mediators	75
	References	75
5	A SURVEY OF DIRECT ELECTRON TRANSFER FROM MICROBES TO ELECTRONICALLY ACTIVE SURFACES	81
5.1	Introduction	81
5.2	Extracellular electron transfer – microbial connections	82
5.2.1	Localized sites for membrane associated EET	83
5.2.1.1	<i>Shewanella</i> cytochromes	83
5.2.1.2	<i>Geobacter</i> cytochromes	85
5.2.2	Bacterial nanowires	87
5.2.2.1	<i>Geobacter</i> nanowires	88
5.2.2.2	<i>Shewanella</i> nanowires	88
5.2.2.3	Nanowires produced by other microorganisms	90

5.2.3	Nanowire characterization	90
5.2.3.1	Composition	91
5.2.3.2	Regulation	91
5.2.3.3	Conductivity	92
5.2.3.4	Function	93
5.2.3.5	Prevalence	93
5.3	Ecological significance of extracellular electron transfer	93
	References	95
6	GENETICALLY MODIFIED MICROORGANISMS FOR BIOELECTROCHEMICAL SYSTEMS	101
6.1	Introduction	101
6.2	Extracellular respiration in <i>Shewanella Oneidensis</i> and <i>Geobacter Sulfurreducens</i>	102
6.3	Scientific motivation for heterologous gene expression	105
6.4	Methods and challenges for heterologous gene expression in <i>E. coli</i>	107
6.5	Biotechnological applications – designing the 'super bug'	110
6.5.1	The 'super bug' for BES applications	110
6.5.2	The 'super bug' for bioremediation applications	112
6.6	Closing remarks	113
6.7	Acknowledgements	113
	References	113
7	ELECTROCHEMICAL LOSSES	119
7.1	Introduction	119
7.2	Individual electrochemical losses	120
7.2.1	Activation polarization	121
7.2.1.1	Means to decrease the activation polarization	122
7.2.2	Ohmic polarization	122
7.2.2.1	Means to decrease the ohmic polarization	124
7.2.3	Concentration polarization (Mass transfer and reaction polarization)	125

7.2.3.1	Means to decrease the concentration polarization	127
7.2.4	Reactant crossover – ‘internal currents’	127
7.2.4.1	Means to decrease internal current losses	128
7.2.5	The pH splitting between anode and cathode	129
7.2.5.1	Means to prevent the pH splitting	129
7.3	Methods	129
7.3.1	Experimental strategies for the recording of polarization plots	129
7.3.1.1	Current interrupt technique	130
7.4	Conclusions	131
	References	132
8	ELECTROCHEMICAL TECHNIQUES FOR THE ANALYSIS OF BIOELECTROCHEMICAL SYSTEMS	135
8.1	Cyclic voltammetry for the study of microbial electron transfer at electrodes	137
8.1.1	Introduction	137
8.1.2	Turnover vs. non-turnover voltammetry experiments	140
8.1.2.1	General considerations	140
8.1.2.2	Voltammetry in the presence of substrates	141
8.1.2.3	Voltammetry in the absence of substrates	145
8.1.2.4	Concluding remarks	148
	References	148
8.2	Importance of Tafel plots in the investigation of bioelectrochemical systems	153
8.2.1	Introduction	153
8.2.2	Use of Tafel plots for performance evaluation of microbial fuel cells	156
8.2.2.1	Tafel plots for monitoring the electrocatalytic activity of anode materials toward microbial consortia	157
8.2.2.2	Tafel plots for examining charge transfer with microbial pure cultures	162

8.2.2.3	Estimating the maximum power production from Tafel plots.....	163
