

Nanobiotechnology

Concepts, Applications and Perspectives

Edited by

Christof M. Niemeyer and Chad A. Mirkin

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

Part I Interphase Systems

1	Biocompatible Inorganic Devices	1
	<i>Thomas Sauterowski</i>	
1.1	Introduction	1
1.2	Implant Coatings	1
1.2.1	Stents	2
1.2.2	Seeds	7
1.3	Conclusion	10
2	Microfluidics Meets Nano: Lab-on-a-Chip Devices and their Potential for Nanobiotechnology	13
	<i>Holger Bartos, Friedrich Götz, and Ralf-Peter Peters</i>	
2.1	Introduction	13
2.2	Overview	13
2.2.1	Definition and History	13
2.2.2	Advantages of Microfluidic Devices	14
2.2.3	Concepts for Microfluidic Devices	15
2.2.4	Fluid Transport	17
2.2.5	Stacking and Scaling	18
2.3	Methods	19
2.3.1	Materials for the Manufacture of Microfluidic Components	19
2.3.1.1	Silicon	19
2.3.1.2	Glass	19
2.3.1.3	Polymers	20
2.3.2	Fluidic Structures	21
2.3.3	Fabrication Methods	23
2.3.4	Surface Modifications	23
2.3.5	Spotting	25
2.3.6	Detection Mechanisms	26
2.4	Outlook	26

3	Microcontact Printing of Proteins	31
	<i>Emmanuel Delamarche</i>	
3.1	Introduction	31
3.2	Strategies for Printing Proteins on Surfaces	33
3.2.1	Contact Processing with Hydrogel Stamps	33
3.2.2	Microcontact Printing	33
3.2.3	Affinity-Contact Printing	34
3.3	Microcontact Printing Polypeptides and Proteins	34
3.3.1	Printing One Type of Biomolecule	35
3.3.2	Substrates	36
3.3.3	Resolution and Contrast of the Patterns	38
3.4	Activity of Printed Biomolecules	40
3.5	Printing Multiple Types of Proteins	42
3.5.1	Additive and Subtractive Printing	42
3.5.2	Parallel Inking and Printing of Multiple Proteins	44
3.5.3	Affinity-Contact Printing	44
3.6	Methods	45
3.6.1	Molds and Stamps	45
3.6.2	Surface Chemistry of Stamps	47
3.6.3	Inking Methods	47
3.6.4	Treatments of Substrates	48
3.6.5	Printing	48
3.6.6	Characterization of the Printed Patterns	49
3.7	Outlook	49
4	Cell–Nanostructure Interactions	53
	<i>Joachim P. Spatz</i>	
4.1	Introduction	53
4.2	Methods	56
4.3	Outlook	63
5	Defined Networks of Neuronal Cells in Vitro	66
	<i>Andreas Offenhäuser and Angela K. Vogt</i>	
5.1	Introduction	66
5.2	Overview: Background and History	67
5.2.1	Physiology of Information Processing within Neuronal Networks	67
5.2.2	Topographical Patterning	67
5.2.3	Chemical Patterning	68
5.3	Methods	69
5.3.1	Topographical Patterning	69
5.3.2	Photolithographic Patterning	70
5.3.3	Photochemical Patterning	70
5.3.4	Microcontact Printing	71
5.4	Outlook	72

Part II Protein-based Nanostructures

6	S-Layers	77
	<i>Uwe B. Sleytr, Eva-Maria Egelsee, Dietmar Pum, and Bernhard Schuster</i>	
6.1	Overview	77
	Abbreviations	77
6.1.1	Chemistry and Structure	78
6.1.2	Genetics and Secondary Cell-Wall Polymers	80
6.1.3	Assembly	82
6.1.3.1	Self-Assembly in Suspension	82
6.1.3.2	Recrystallization at Solid Supports	83
6.1.3.3	Recrystallization at the Air/Water Interface and on Langmuir Lipid Films	83
6.2	Methods	84
6.2.1	Diagnostics	84
6.2.2	Lipid Chips	85
6.2.3	S-Layers as Templates for the Formation of Regularly Arranged Nanoparticles	87
6.3	Outlook	89
7	Engineered Nanopores	93
	<i>Hagan Bayley, Orit Braha, Stephen Chelvy, and Li-Qun Gu</i>	
7.1	Overview	93
7.1.1	What is a Nanopore?	93
7.1.2	Engineering Nanopores	96
7.1.3	What Can a Nanopore Do?	97
7.1.4	What are the Potential Applications of Nanopores?	100
7.1.5	Keeping Nanopores Happy	103
7.2	Methods	104
7.2.1	Protein Production	104
7.2.2	Protein Engineering	104
7.2.3	Electrical Recording	105
7.2.4	Other Systems	105
7.3	Outlook	106
7.3.1	Rugged Pores	106
7.3.2	Supported Bilayers	106
7.3.3	Membrane Arrays	106
7.3.4	Alternative Protein Pores	107
7.3.5	Pores with New Attributes and Applications	108
7.3.6	Theory	108
8	Genetic Approaches to Programmed Assembly	113
	<i>Stanley Brown</i>	
8.1	Introduction	113
8.2	Order from Chaos	113

8.3	Monitoring Enrichment	116
8.4	Quantification of Binding and Criteria for Specificity	119
8.5	Unselected Traits and Control of Crystallization/Reactivity	119
8.6	Dominant Traits, Interpretation of Gain-of-Function Mutants	120
8.7	Interpretation and Requirement for Consensus Sequences	120
8.8	Sizes of Proteins and Peptides	122
8.9	Mix and Match, Fusion Proteins, and Context-Dependence	122
8.10	Mix and Match, Connecting Structures	122
8.11	Outlook	123
9	Microbial Nanoparticle Production	126
	<i>Murali Sastry, Absar Ahmad, M. Islam Khan, and Rajiv Kumar</i>	
9.1	Overview	126
9.2	Outlook	133
10	Magnetosomes: Nanoscale Magnetic Iron Minerals in Bacteria	136
	<i>Richard B. Frankel and Dennis A. Bazylinski</i>	
10.1	Introduction	136
10.1.1	Magnetotactic Bacteria	136
10.1.2	Magnetosomes	137
10.1.3	Cellular Magnetic Dipole and Magnetotaxis	138
10.1.4	Magneto-Aerotaxis	139
10.1.5	Magnetite Crystals in Magnetosomes	140
10.1.6	Greigite Crystals in Magnetosomes	141
10.1.7	Biochemistry and Gene Expression in Magnetosome Formation	141
10.1.8	Applications of Magnetosomes	143
10.2	Research Methods	143
10.3	Conclusion and Future Research Directions	143
11	Bacteriorhodopsin and its Potential in Technical Applications	146
	<i>Norbert Hampp and Dieter Oesterhelt</i>	
11.1	Introduction	146
11.2	Overview: The Molecular Properties of Bacteriorhodopsin	147
11.2.1	Haloarchaea and their Retinal Proteins	147
11.2.2	Structure and Function of Bacteriorhodopsin	150
11.2.3	Genetic Modification of Bacteriorhodopsin	153
11.2.4	Biotechnological Production of Bacteriorhodopsins	154
11.3	Overview: Technical Applications of Bacteriorhodopsin	155
11.3.1	Photoelectric Applications	156
11.3.1.1	Preparation of Oriented PM Layers	156
11.3.1.2	Interfacing the Proton-Motive Force	158
11.3.1.3	Application Examples	158
11.3.2	Photochromic Applications	159
11.3.2.1	Photochromic Properties of Bacteriorhodopsin	159
11.3.2.2	Preparation of Bacteriorhodopsin Films	161

11.3.2.3	Interfacing the Photochromic Changes	161
11.3.2.4	Application Examples	161
11.3.3	Applications in Energy Conversion	163
11.4	Methods	165
11.5	Outlook	165
12	Polymer Nanocontainers	168
	<i>Alexandra Graff, Samantha M. Benito, Corinne Verbert, and Wolfgang Meier</i>	
12.1	Introduction	168
12.2	Overview	168
12.2.1	From Liposomes in Biotechnology to Polymer Nanocontainers in Therapy	168
12.2.2	Dendrimers	169
12.2.3	Layer by Layer (LbL) Deposition	170
12.2.4	Block Copolymer Self-Assembly	172
12.2.4.1	Shell Cross-linked Knedel's (SCKs)	173
12.2.4.2	Block Copolymer Nanocontainers	174
12.3	Polymer Nanocontainers with Controlled Permeability	175
12.3.1	Block Copolymer Protein Hybrid Systems	175
12.3.2	Stimuli-responsive Nanocapsules	178
12.4	Nanoparticle Films	179
12.5	Biomaterials and Gene Therapy	180
12.6	Outlook	181
13	Biomolecular Motors Operating in Engineered Environments	185
	<i>Stefan Diez, Jorne H. Helenius, and Jonathon Howard</i>	
13.1	Overview	185
13.2	Methods	190
13.2.1	General Conditions for Motility Assays	190
13.2.2	Temporal Control	191
13.2.3	Spatial Control	191
13.2.4	Connecting to Cargoes and Surfaces	194
13.3	Outlook	195
14	Nanoparticle-Biomaterial Hybrid Systems for Bioelectronic Devices and Circuitry	200
	<i>Eugenii Katz and Itamar Willner</i>	
14.1	Introduction	200
14.2	Biomaterial-Nanoparticle Systems for Bioelectronic and Biosensing Applications	202
14.2.1	Bioelectronic Systems Based on Nanoparticle-Enzyme Hybrids	202
14.2.2	Bioelectronic Systems for Sensing of Biorecognition Events Based on Nanoparticles	205

14.3	Biomaterial-based Nanocircuitry	215
14.3.1	Protein-based Nanocircuitry	216
14.3.2	DNA as Functional Template for Nanocircuitry	218
14.4	Conclusions and Perspectives	221

Part III DNA-based Nanostructures

15	DNA-Protein Nanostructures	227
	<i>Christof M. Niemeyer</i>	
15.1	Overview	227
15.1.1	Introduction	227
15.1.2	Oligonucleotide-Enzyme Conjugates	228
15.1.3	DNA Conjugates of Binding Proteins	229
15.1.4	Noncovalent DNA-Streptavidin Conjugates	231
15.1.5	Multifunctional Protein Assemblies	234
15.1.6	DNA-Protein Conjugates in Microarray Technologies	236
15.2	Methods	238
15.2.1	Conjugation of Nucleic Acids and Proteins	238
15.2.2	Immuno-PCR	239
15.2.3	Supramolecular Assembly	240
15.2.4	DNA-directed Immobilization	240
15.3	Outlook	241
16	DNA-templated Electronics	244
	<i>Erez Braun and Uri Sivan</i>	
16.1	Introduction and Background	244
16.2	DNA-templated Electronics	246
16.3	Sequence-specific Molecular Lithography	249
16.4	Summary and Perspectives	253
17	Biomimetic Fabrication of DNA-based Metallic Nanowires and Networks	256
	<i>Michael Mertig and Wolfgang Pompe</i>	
17.1	Introduction	256
17.2	Template Design	258
17.2.1	DNA as a Biomolecular Template	258
17.2.2	Integration of DNA into Microelectronic Contact Arrays	258
17.2.3	DNA Branching for Network Formation	261
17.3	Metallization	262
17.3.1	Controlled Cluster Growth on DNA Templates	263
17.3.2	First-Principle Molecular Dynamics Calculations of DNA Metallization	267
17.4	Conductivity Measurements on Metalized DNA Wires	270
17.5	Conclusions and Outlook	272

23.13	Gold Cluster Nanocrystals	369
23.14	Gold Cluster–Oligonucleotide Conjugates: Nanotechnology Applications	369
23.14.1	DNA Nanowires	370
23.14.2	3-D Nanostructured Mineralized Biomaterials	370
23.14.3	Gold-quenched Molecular Beacons	372
23.15	Other Metal Cluster Labels	372
23.15.1	Platinum and Palladium	373
23.15.2	Tungstates	374
23.15.3	Iridium	375
24	Surface Biology: Analysis of Biomolecular Structure by Atomic Force Microscopy and Molecular Pulling	387
	<i>Emin Oroudjev, Signe Danielsen and Helen G. Hansma</i>	
24.1	Introduction	387
24.2	Recent Results	388
24.2.1	DNA	388
24.2.1.1	DNA Condensation	388
24.2.1.2	DNA Sequences Recognized by Mica	390
24.2.1.3	Drug-binding to Single ds-DNA Molecules	390
24.2.2	Proteins	390
24.2.2.1	Prion Proteins	391
24.2.2.2	Membrane Proteins	393
24.2.2.3	Spider Silk	394
24.2.3	Fossils	394
24.2.4	Science and Nature	394
24.3	Methodology	395
24.3.1	The Probe	396
24.3.2	The Sample	397
24.4	The Future	398
24.4.1	Unity or Diversity?	398
24.4.2	World-wide Research	399
25	Force Spectroscopy	404
	<i>Markus Seitz</i>	
25.1	Overview	404
25.1.1	Dynamic Force Spectroscopy of Specific Biomolecular Bonds	405
25.1.2	Force Spectroscopy and Force Microscopy of Cell Membranes	409
25.1.3	Protein (Un-)folding	409
25.1.4	Elasticity of Individual Polymer Molecules	412
25.1.5	DNA Mechanics	414
25.1.6	DNA–Protein Interactions	416
25.1.7	Molecular Motors	417
25.1.8	Synthetic Functional Polymers	418
25.2	Methods	419

25.2.1	AFM Cantilevers	419
25.2.2	Microneedles	421
25.2.3	Optical Tweezers	421
25.2.4	Magnetic Tweezers	422
25.2.5	Biomembrane Force Probe	423
25.3	Outlook	424
26	Biofunctionalized Nanoparticles for Surface-Enhanced Raman Scattering and Surface Plasmon Resonance	429
	<i>Mahnaz El-Kouedi and Christine D. Keating</i>	
26.1	Overview	429
26.1.1	Introduction	429
26.1.2	Applications in SPR	430
26.1.2.1	Nanoparticle Substrates	430
26.1.2.2	Planar Substrates	431
26.1.3	Applications in SERS	434
26.1.3.1	Proteins	434
26.1.3.2	Nucleic Acids	437
26.2	Methods	439
26.2.1	Planar SPR Substrate Preparation	439
26.2.2	Metal Nanoparticles	439
26.2.3	Bioconjugates	439
26.2.4	General Comments	440
26.3	Future Outlook	440
27	Bioconjugated Silica Nanoparticles for Bioanalytical Applications	444
	<i>Timothy J. Drake, Xiaojun Julia Zhao, and Weikong Tan</i>	
27.1	Overview	444
27.2	Methods	445
27.2.1	Fabrication	445
27.2.2	Particle Probes	447
27.2.2.1	Dye-doped Silica Nanoparticles	447
27.2.2.2	Magnetic Silica Nanoparticles	449
27.2.3	Biofunctionalization of Silica Nanoparticles	449
27.2.3.1	Amino-Group Cross-Linkage	450
27.2.3.2	Avidin-Biotin Linking Bridge	451
27.2.3.3	Disulfide-coupling Chemical Binding	451
27.2.3.4	Cyanogen Bromide Modification	451
27.2.4	Bioanalytical Applications for Silica Nanoparticles	452
27.2.4.1	Cellular Labeling/Detection	452
27.2.4.2	DNA Analysis	453
27.2.4.3	Ultrasensitive DNA Detection	453
27.3	Outlook	454
	Index	458
