CHAPTERS

Overview

Grass Roots Science: A Fifty-Year Personal Perspective	3
<i>Emanuel Epstein</i>	

Radical Genetics and Development

The Cellular Organization of the Root Apex and Its Dynamic Behavior during Root Growth	15
<i>Stuart F. Baum and Thomas L. Rost</i>	

On the Post-Mitotic Isodiametric Growth Zone in Roots	23
<i>Tobias I. Baskin and Gerrit T. S. Beemster</i>	

Root Cell Extension: Genetic and Molecular Approaches	34
<i>Leonard D. Pysh and Philip N. Benfey</i>	

Transposon Insertional Mutagenesis and the Study of Plant Root Development	48
<i>Ryuji Tsugeki, Maya Olson, and Nina Fedoroff</i>	

<i>Arabidopsis thaliana</i> : A Model System for Examining Plant Response to Phosphorus Starvation	59
<i>Melanie C. Trull and Jill Deikman</i>	

Visualization of Root Growth and Development through Magnetic Resonance Imaging	67
<i>Janet S. MacFall</i>	

Radical Physiology

Root Architecture and Phosphorus Acquisition Efficiency in Common Bean	81
<i>Jonathan P. Lynch</i>	

Phosphorus Deficiency in White Lupin Alters Root Development and Metabolism	92
<i>Glena A. Gilbert, Deborah L. Allan, and Carroll P. Vance</i>	

Regulation of Root Growth Maintenance at Low Water Potentials	104
<i>Robert E. Sharp, Mary E. LeNoble, and William G. Spollen</i>	
Variation in Carbon Utilization in Root Respiration and Exudation as Dependent on a Species' Potential Growth Rate and Nutrient Supply	116
<i>Hans Lambers, Ingeborg Scheurwater, and Frank Millenaar</i>	
The Exodermis and Its Interactions with the Environment	131
<i>Carol A. Peterson</i>	
Physiological Basis for Zn Hyperaccumulation in <i>Thlaspi caerulescens</i>	139
<i>Mitch M. Lasat and Leon V. Kochian</i>	
Roots in Their Environment: Biotic Interactions	
The Use of the Model Legume <i>Lotus japonicus</i> to Study Nodulation and Lateral Root Formation.....	153
<i>Frans J. de Bruijn, Judith Wopereis, Philipp Kapranov, Frank B. Dazzo, and Krzysztof Szczyglowski</i>	
Signaling in Plants and Root-Infecting Fungi Associations	164
<i>Guillaume Bécard, Thierry Béguiristain, and Gerry Nagahashi</i>	
Ecophysiology of Mycorrhizal Roots	178
<i>Roger T. Koide and Edward P. Boswell</i>	
Nutrient Transport and Metabolism in the Life Cycle of Arbuscular Mycorrhizae as Examined by NMR Spectroscopy	187
<i>Philip E. Pfeffer, Yair Shachar-Hill, Guillaume Bécard, Dominique Rolin, and David D. Douds, Jr.</i>	
Root Border Cells: Phenomenology of Signal Exchange	210
<i>Martha C. Hawes, Lindy A. Brigham, Fushi Wen, Ho Hyung Woo, and Yanmin Zhu</i>	
A Dirty Look: Soil Microflora and Rhizosphere Microbiology	219
<i>Robert M. Goodman, Scott B. Bintrim, Jo Handelsman, Betania F. Quirino, Juan Carlos Rosas, Holly M. Simon, and Kevin P. Smith</i>	
Roots in the Ecosystem	
Water Loss from Tree Roots Influences Soil Water and Nutrient Status and Plant Performance	235
<i>Todd E. Dawson</i>	

Responses of Fine Roots to Dry Surface Soil: A Case Study in Citrus	251
<i>David Eissenstat</i>	
Inter-root Communications and the Structure of Desert Plant Communities	265
<i>Bruce E. Mahall</i>	
Roots and People	
Plant Roots in Agriculture and Medicine: The Uses of Radical Biology	283
<i>Víctor M. Loyola-Vargas and S. M. T. Hernández-Sotomayor</i>	
The Biology and Culture of Cassava Roots	297
<i>Jennifer M. McMahon and Richard T. Sayre</i>	
Molecular Insights into the Biology of Sweetpotato (<i>Ipomoea batatas</i>)	307
<i>Channapatna S. Prakash, Marceline Egnin, Guohao He, Ramanjini Gowda, and David Scott, Jr.</i>	
The Future of Radical Biology? Connecting Roots, People, and Scientists	320
<i>Hector E. Flores, Lindy A. Brigham, and Jorge M. Vivanco</i>	

MINI-PAPERS

Root Growth and Development

Laser Ablation of Cap Cells in Primary Roots of <i>Arabidopsis</i> <i>thaliana</i> Provides Single-Cell Resolution of the Gravity Sensor	343
<i>Elison Blancaflor, Jeremiah Fasano, and Simon Gilroy</i>	
Microtubule-Associating Protein, Elongation Factor 1- α : A Potential Role in Cortical Microtubule Stabilization?	346
<i>Richard C. Moore and Richard J. Cyr</i>	
Intact Cucumber Roots Exhibit a Rapid Increase in pH and Hydrogen Peroxide Concentration When Treated with Oligogalacturonides	348
<i>Mark D. Spiro and Daniel J. Cosgrove</i>	
Phytohormones and Development of Lateral Roots in <i>Arabidopsis thaliana</i>	350
<i>Catherine Bellini, Marianne Delarue, Paola Vittorioso, Jean-Denis Faure, Els Prinsen, Harry Van Onckelen, Isabelle Barlier, and Michel Caboche</i>	

Auxin Transport Inhibitors Limit Proteoid Root Formation in White Lupin	353
<i>Glena A. Gilbert, J. Diane Knight, Carroll P. Vance, and Deborah L. Allan</i>	
Glucose, Nitrate, and the Control of Lateral Root Initiation	356
<i>Ian J. Bingham, Jacqui M. Blackwood, and Trevor Stuchbury</i>	
Cell Cycle Progression in Nematode-Induced Galls and Syncytia	358
<i>Janice de Almeida Engler, Sylvia Burssens, John L. Celenza Jr., Dirk Inzé, Marc Van Montagu, Gilbert Engler, and Godelieve Gheysen</i>	
Genetic Control of Nodal Root Development	360
<i>Derek W. R. White</i>	
Stresses, Strains, and Upside-Down Roots	363
<i>Stephane Berthier, Alexia Stokes, and Daniel Guitard</i>	
Root Cost and Turnover	
Fine Root Survivorship in Fruit Trees: The Influence of Root Diameter and Soil Organisms	367
<i>Christina E. Wells and David M. Eissenstat</i>	
Effects of Elevated Carbon Dioxide and Nitrogen Fertilization on the Lifespan of <i>Pinus ponderosa</i> Fine Roots	370
<i>Mark G. Johnson, David T. Tingey, Marjorie J. Storm, Lisa M. Ganio, and Donald L. Phillips</i>	
Effects of Phosphorus on Root Carbon Costs in Common Bean	374
<i>Kai L. Nielsen, Tjeerd J. Bouma, Jonathan P. Lynch, and David M. Eissenstat</i>	
Root Respiration of Citrus Roots is Not Affected by Soil Carbon Dioxide	376
<i>Tjeerd J. Bouma, Kai L. Nielsen, David M. Eissenstat, and Jonathan P. Lynch</i>	
Interaction of Carbon Dioxide and Phosphorus Availability during Vegetative and Reproductive Growth of Chrysanthemum	379
<i>Conny W. Hansen, Jonathan P. Lynch, and Carl-Otto Ottosen</i>	
Patterns of Carbon Deployment in Fine Root Systems of Fast- versus Slow-Growing Woody Species	383
<i>Louise H. Comas, David M. Eissenstat, and Tjeerd J Bouma</i>	

Root Morphology/Wetlands

- Root Morphology and Phosphorus Efficiency in Three
Pigeonpea Genotypes Grown in Low-Phosphorus Soils 385
Jocelyne Ascencio and Elena Medina

- Root System Development in Pot Rose in Response to Nitrogen
Source and Its Apparent Effects on Stress Tolerance 389
H. N. Rasmussen and K. R. Starkey

- Interactions of Ethylene and Phosphorus Nutrition on Root Growth 391
Kristian Borch, Tjeerd Bouma, Kathleen Brown, and Jonathan P. Lynch

- Adventitious Root Response in Field-Grown Common Bean: A
Possible Adaptive Strategy to Low-Phosphorus Conditions 394
Carter R. Miller, Kai L. Nielsen, Jonathan P. Lynch, and Douglas Beck

- Genetic Variation in Bean Root Traits in Response to Phosphorus
Deficiency: Preliminary Studies of the Parents of Recombinant
Inbred Line Populations 397
Xiaolong Yan, Carter R. Miller, and Jonathan P. Lynch

Root Hairs

- Regulation of Vacuolar pH in Maize Root-Hair Cells in Situ 400
*David Brauer, Joseph Uknalis, Ruth Triana, Yair Shachar-Hill,
and Shu-I Tu*

- The Role of Cytoplasmic Calcium Gradients in Directing
Root Hair Growth 402
Tatiana N. Bibikova and Simon Gilroy

- Cytoplasmic pH Gradients Mediate Tip Growth in *Arabidopsis*
thaliana Root Hairs 405
Terence R. Bates and Jonathan P. Lynch

- Function of the *Arabidopsis Caprice* Gene in Root Hair Formation 407
*Takuji Wada, Tatsuhiko Tachibana, Yoshiro Shimura, and
Kiyotaka Okada*

- Insensitivity of Root Hair Elongation to Salinity Stress in
Arabidopsis thaliana L. 409
Stephen J. Halperin and Jonathan P. Lynch

- A Light Microcopy Study of R50 (*sym* 16), a Pea Mutant
with Low Nodulation 411
Sophie Hyam and Frédérique C. Guinel

Gene Expression/Molecular Genetics

- A Tobacco HMG-like Protein Interacts with a Root-Specific Promoter 414
Wenjun Zhao, Yuri T. Yamamoto, and Mark A. Conkling

- Phosphate Acquisition in Tomato Roots 417
Marcel Bucher, Silvia Brunner, Pierre Daram, and Nikolaus Amrhein

- Phospholipase C in *Catharanthus roseus*-Transformed Roots 422
*S. M. Teresa Hernández-Sotomayor, César de los Santos Briones,
J. Armando Muñoz-Sánchez, M. Luisa Piña-Chablé, and
Victor M. Loyola-Vargas*

- Molecular Genetic Characterization of *cobra*, A Cell Expansion
Mutant of *Arabidopsis thaliana* 426
*Gary Schindelman, Atsushi Morikami, Marie-Theres Hauser,
and Philip Benfey*

- Analysis of Lateral Root Formation in *Arabidopsis* 428
Jocelyn E. Malamy and Philip N. Benfey

Root Cultures and Secondary Metabolites

- Biosynthesis of Constitutive versus Inducible Metabolites in Hairy Root
Cultures of *Hyoscyamus muticus* 430
Fabricio Medina-Bolivar and Hector E. Flores

- Correlations between Peroxidase Activity, Calcium, and
Artemisinin Levels in Hairy Roots of *Artemisia annua* L. 432
Kristin K. Wobbe, Xiang Zhang, and Pamela Weathers

- Role of Root Hairs and Internal Diffusional Mass-Transfer Resistance
in Nutrient-Limited Root Tissue Culture 435
Julie L. Bordonaro, Patrick T. Asplund, and Wayne R. Curtis

- Morphological Structured Model for Hairy Root Cultures 438
Isaac Berzin, D. Mills, and J. C. Merchuk

- Aseptic Aphids and Hairy Root Herbivory: In Vitro Co-culture to
Study Plant-Insect Interactions 444
Tianshu Wu and Hector E. Flores

- Updates on a Bioassay for Determining Alfalfa Root Nodule Compounds
that Stimulate Clover Root Curculio Neonates to Feed 448
Cheryl A. Krasowski, Christopher A. Mullin, and Arthur A. Hower

The Ability of the Naphthoquinone Shikonin to Influence Microorganisms in the Rhizosphere of <i>Lithospermum erythrorhizon</i>	451
<i>Lindy A. Brigham, Paula J. Michaels, and Hector E. Flores</i>	
Characterization of a Major Storage Root Protein Isolated from the Andean Root Crop Species <i>Mirabilis expansa</i>	454
<i>Jorge M. Vivanco, Daniel Weitzel, and Hector E. Flores</i>	
Nutrient Rellocation and Signal Transduction in Root Cultures Exposed to Pathogenic Fungi	458
<i>Colleen Merritt, Edgard Carvalho, and Wayne Curtis</i>	
Root Responses to Water Stress	
¹⁵ N-Nitrate Uptake Ability of Corn Roots Subjected to Different Degrees of Soil Drying	461
<i>Zaklina Buljovic and Christof Engels</i>	
Phosphorus and Potassium Depletion by Roots of Field-Grown Slash Pine: Aerobic and Hypoxic Conditions	464
<i>José A. Escamilla and Nicholas B. Comerford</i>	
Extracellular Acid Phosphatase Activity in <i>Prosopis chilensis</i> Roots under Salt and Drought Stress Conditions: Effect of Root Caps	467
<i>Graciela E. Muñoz, Corina Gonzalez, and Patricia Flores</i>	
Determinate Root Growth as an Adaptation to Drought in Sonoran Desert Cactaceae	471
<i>Joseph G. Dubrovsky</i>	
Impact of Oxygen Availability in Polyethylene Glycol Solutions on Root Growth at Low Water Potentials	475
<i>Paul E. Verslues, Eric S. Ober, and Robert E. Sharp</i>	
Reactor Design for Delivery of Oxygen-Depleted Solution to Plants for Measurement of Root-Oxygen Release	477
<i>Amy M. Bonser, Wayne Curtis, and Robert Berghage</i>	
Magnetic Resonance Imaging Studies on Water Responses to Induced Damages in Potato Tuber (<i>Solanum tuberosum</i> Linn)	480
<i>Ramesh S. Chaughule, Ganesh N. Iyer, and Nayan C. Shah</i>	
Roots and Heavy Metals	
Simulated Acid Soil Stress and Its Influence on Root Growth and H ⁺ -ATPase of Root Plasma Membranes in a Tropical Forage Grass, <i>Brachiaria</i>	483
<i>Peter Wenzl, Lida I. Mancilla, Jorge E. Mayer, and Idupulapati M. Rao</i>	

Mechanisms of Aluminum Tolerance in Wheat: The Role of Root Exudates and Electrical Signals	487
<i>Lisa A. Papernik and Leon V. Kochian</i>	
Aluminum Resistance in the <i>Arabidopsis thaliana</i> Mutant <i>alr-104</i> is Due to Aluminum-Induced Increase of Rhizosphere pH	489
<i>Jörg Degenhardt, Paul B. Larsen, Stephen H. Howell, and Leon V. Kochian</i>	
Increasing the Phytoextraction of Zinc and Uranium from Contaminated Soil through the Application of Soil Amendments	491
<i>Stephen D. Ebbs, Wendell A. Norvell, and Leon V. Kochian</i>	
Physiological Basis for Zinc Hyperaccumulation in <i>Thlaspi caerulescens</i> ...	494
<i>Mitch M. Lasat and Leon V. Kochian</i>	
Arbuscular Mycorrhizal Root Associations	
Establishment of Monoxenic Root Organ Cultures for the Study of Gene Expression of Fungal Phosphate Transporters in the Arbuscular Mycorrhizal Association	496
<i>Ignacio E. Maldonado-Mendoza and Maria J. Harrison</i>	
Gene Expression in Mycorrhizal Roots of <i>Medicago truncatula</i>	498
<i>Anthony T. Trieu, Marianne L. van Buuren, and Maria J. Harrison</i>	
Identification of Mycorrhizal Mutants of <i>Medicago truncatula</i>	500
<i>Laura A. Blaylock, R. Varma Penmetsa, Douglas R. Cook, and Maria J. Harrison</i>	
Extraradical Mycelium of Arbuscular Mycorrhizae: The Concealed Extension of Roots	502
<i>Berta Bago, Concepción Azcón-Aguilar, and Yves Piché</i>	
Vesicular-Arbuscular Mycorrhizal Infection of Sugar Maple (<i>Acer saccharum</i> Marsh) Seedling Roots in Soils of Varying Ca to Al Ratios ..	506
<i>William E. Sharpe, Bryan R. Swistock, Tsering Yangkey, and Laura J. Suomi</i>	
Effects of a Winter Wheat Cover Crop on Vesicular–Arbuscular Mycorrhizal Inoculum Potential	509
<i>Edward P. Boswell, Roger T. Koide, and Durland L. Shumway</i>	
The Effects of Habitat Fragmentation on Mycorrhizal Associations of an Iowa Prairie Forb	513
<i>Jennifer M. Page and Stephen D. Hendrix</i>	

Mycorrhizal Fungi Alter the Organic Acid Exudation Profile of Red Clover Rhizospheres	517
<i>Cicy Po and Jonathan R. Cumming</i>	
Ectomycorrhizae and Other Fungal-Root Associations	
Morphometric Analysis of the Ion-Absorbing Membranes in Tree Roots: The Effects of Mycorrhizae	520
<i>Jeff H. Taylor and Carol A. Peterson</i>	
Natural Abundance Nitrogen Isotopes: A Potential Tool for Exploring Diversity of Nitrogen Utilization in Ectomycorrhizal Fungal Communities	523
<i>Erik A Lilleskov, Erik A Hobbie, and Timothy J. Fahey</i>	
Patterns of Organic Acid Exudation in Ectomycorrhizal Fungi	526
<i>Jonathan R. Cumming</i>	
Community-Level Selection: Multispecies Soil Communities as Evolvable Units in an Artificial Selection Experiment	529
<i>William Swenson and David Sloan Wilson</i>	
Root Colonization and Growth Responses to an Improved Biocontrol Fungus	532
<i>Thomas Björkman</i>	
Isolation of Pea Root Mucilage and Its Utilization by <i>Rhizobium leguminosarum</i>	535
<i>Emma M. Knee, Mengsheng Gao, Fang-Cheng Gong, Angela Jones, Andrew Mort, and W. Dietz Bauer</i>	
Index	538
