<i>List of contributors</i>	vii	<i>Acknowledgments</i>	ix
<b>Introduction</b>	<i>Marjorie Grene</i>		<i>page</i> 1
<b>PART I. THE DEVELOPING SYNTHESIS</b>			
1.	Fisher's entrance into evolutionary science: the role of eugenics	<i>Bernard Norton</i>	19
2.	The abandonment of Lamarckian explanations: the case of climatic parallelism of animal characteristics	<i>Bernhard Rensch</i>	31
3.	The development of Wright's theory of evolution: systematics, adaptation, and drift	<i>William B. Provine</i>	43
4.	The hardening of the modern synthesis	<i>Stephen Jay Gould</i>	71
<b>PART II. MIMETIC THEORY: ITS RELATION TO THE HISTORY OF EVOLUTIONARY BIOLOGY</b>			
5.	Mimicry: views of naturalists and ecologists before the modern synthesis	<i>William C. Kimler</i>	97
6.	"The hypothesis that explains mimetic resemblance explains evolution": the gradualist–saltationist schism	<i>John R. G. Turner</i>	129
<b>PART III. THE GERMAN PALEONTOLOGICAL AND MORPHOLOGICAL TRADITION</b>			
7.	Evolutionary theory in German paleontology	<i>Wolf-Ernst Reif</i>	173
8.	The role of morphology in the theory of evolution	<i>Rupert Riedl</i>	205

PART IV. SOME CONTEMPORARY ISSUES: THE  
SYNTHESIS RECONSIDERED

9. Paleobiology at the crossroads: a critique of some modern paleobiological research programs <i>Antoni Hoffman</i>	241
10. Current controversies in evolutionary biology <i>John Maynard Smith</i>	273
11. "Adaptation" <i>Richard M. Burian</i>	287
12. Evolutionary theory and its consequences for the concept of adaptation <i>D. S. Peters</i>	315
