

CONTENTS

Preface	xi
1 Introduction to Synthetic Methods in Step-Growth Polymers	1
<i>Martin E. Rogers, Timothy E. Long, and S. Richard Turner</i>	
1.1 Introduction	1
1.2 Structure–Property Relationships in Step-Growth Polymers	3
1.3 Synthesis of Step-Growth Polymers	9
References	14
2 Polyesters	17
<i>Alain Fradet and Martine Tessier</i>	
2.1 Introduction	17
2.2 Structure–Property Relationships	32
2.3 Synthetic Methods	60
2.4 Polyester Syntheses	95
References	118
3 Polyamides	135
<i>Reinoud J. Gaymans</i>	
3.1 Introduction	135
3.2 Structure–Property Relationships	138
3.3 Overview of Chemistry and Analytical Techniques	149
3.4 Synthetic Methods	164
References	193
4 Polyurethanes and Polyureas	197
<i>Jeff Dodge</i>	
4.1 Introduction	197
4.2 Structure–Property Relationships	208
4.3 Synthesis and Material Characterization	222

4.4	Synthetic Methods	246
	Acknowledgments	258
	References	258
5	Polyimides and Other High-Temperature Polymers	265
	<i>B. Sillion, R. Mercier, and D. Picq</i>	
5.1	Introduction	265
5.2	Structure–Property Relationships	273
5.3	Overview of Chemistry and Analytical Techniques	287
5.4	Synthetic Methods	300
	References	319
6	Synthesis of Poly(arylene ether)s	
	<i>Sheng Wang and J. E. McGrath</i>	
6.1	Introduction	
6.2	General Approaches for the Synthesis of Poly(arylene ether)s	329
6.3	Control of Molecular Weight and/or Endgroups	347
6.4	Control of Topologies	348
6.5	Modification of Poly(arylene ether)s	351
6.6	Block and Graft Copolymers	359
6.7	Miscellaneous Poly(arylene ether)s, Poly(arylene thioether)s, and Related Polymers	361
	References	364
7	Chemistry and Properties of Phenolic Resins and Networks	375
	<i>S. Lin-Gibson and J. S. Riffle</i>	
7.1	Introduction	375
7.2	Materials for the Synthesis of Novolac and Resole Phenolic Oligomers	376
7.3	Novolac Resins	378
7.4	Resole Resins and Networks	398
7.5	Epoxy–Phenolic Networks	411
7.6	Benzoxazines	416
7.7	Phenolic Cyanate Resins	418
7.8	Thermal and Thermo-Oxidative Degradation	418
	References	425
7.9	Appendix	430
8	Nontraditional Step-Growth Polymerization: ADMET	
	<i>A. Cameron Church, Jason A. Smith, James H. Pawlow, and Kenneth B. Wagener</i>	
8.1	Introduction	431

8.2	Overview of Chemistry and Analytical Techniques	435
8.3	Structure–Property Relationships	445
8.4	Synthetic Methods: Silicon-Containing Polymers, Functionalized Polyolefins, and Telechelics	450
8.5	Conclusions	461
	References	461
9	Nontraditional Step-Growth Polymerization: Transition Metal Coupling	467
	<i>Qiao-Sheng Hu</i>	
9.1	Introduction	467
9.2	Structure–Property Relationships	477
9.3	Overview of Chemistry and Analytical Techniques	483
9.4	Synthetic Methods	491
	Acknowledgment	523
	References	523
10	Depolymerization and Recycling	
	<i>Malcolm B. Polk</i>	
10.1	Introduction	527
10.2	Structure–Property Relationships	532
10.3	Factors Affecting the use of Recycled Monomers or Oligomers	537
10.4	Chemistry and Catalysis	543
10.5	Experimental Methods	544
10.6	Synthetic Methods	556
	References	572
