Dedication	44

CHAPTER 1

The Taxonomic Position of Some Genera in the Loganiaceae, Apocynaceae and Rubiaceae, Related Families which Contain Indole Alkaloids

A. J. M. Leeuwenberg

I. Introduction	1
II. Indole alkaloid-bearing genera of the Loganiaceae	3
III. Indole alkaloid-bearing genera of the Apocynaceae	4
IV. Indole alkaloid-bearing genera of the Rubiaceae	5
V. Conclusions	8
References	9

CHAPTER 2

Chemotaxonomic Studies of the Apocynaceae, Loganiaceae and Rubiaceae, with Reference to Indole Alkaloids

M. V. Kisakurek and M. Hesse

I. Introduction	11
II. The alkaloids	12
III. The plant families	18
IV. Chemotaxonomic considerations	18
Acknowledgements	26
References	26

CHAPTER 3

Alkaloids of the Loganiaceae

N. G. Bisset

I. Introduction	27
II. Alkaloids of the Gelsemieae	28
A. <i>Gelsemium</i>	29
B. <i>Mostuea</i>	29

III. Alkaloids of the Strychnae	30
A. <i>Gardneria</i>	30
B. <i>Strychnos</i>	32
IV. Summary	58
References	58

CHAPTER 4

Alkaloids of the Rubiaceae

S. R. Hemingway and J. D. Phillipson

I. Introduction	63
II. Botanical aspects	63
III. Iridoid-derived alkaloids	65
A. Alkaloids of the subfamily Cinchonoideae	66
B. Alkaloids of the subfamily Rubioideae	77
C. Alkaloids of the subfamily Guettardoideae	80
IV. Non-iridoid alkaloids	81
V. Conclusions	84
Acknowledgements	86
References	86

CHAPTER 5

Isolation and Separation Methods for Indole Alkaloids

R. Verpoorte

I. Introduction	91
II. Solvents and artefact formation	92
III. TLC, GLC and HPLC in the analysis of alkaloids	96
A. GLC	96
B. HPLC	97
C. TLC	98
IV. Preparative aspects of column chromatography, HPLC and TLC	99
A. Stationary phase	102
B. Column geometry	106
C. Injection	107
D. Mobile phase	109
E. Preparative TLC	111
References	111

CHAPTER 6

The Biosynthesis of Heteroyohimbine-type Alkaloids

J. Stöckigt

I. Introduction	113
II. The impact of cell cultures on biosynthetic studies	114

III. The pathways leading to the precursors of monoterpene indole alkaloids	116
A. The non-terpenoid portion	116
B. The terpenoid portion	116
IV. The biosynthetic pathway of heteroyohimbine alkaloids	123
A. The overall reaction starting from tryptamine and secologanin	123
B. The first intermediate of the pathway—strictosidine	127
C. Biogenetic sequence between strictosidine and cathenamine	129
D. Pathway side reactions	131
E. The key role of strictosidine in alkaloid biosynthesis	136
V. Conclusions	137
Acknowledgements	138
References	138

CHAPTER 7

Biosynthetic Studies of Antitumor Indole Alkaloids

C. Richard Hutchinson

I. Introduction	143
II. Biosynthesis of camptothecin	144
III. Biosynthesis of perloine	145
IV. Biosynthesis of vincleukoblastine	153
Acknowledgements	156
References	156

CHAPTER 8

Is the Modified Polonovski Reaction Biomimetic?

Pierre Potier

I. Introduction	159
II. Steroidal alkaloids	160
III. Indole alkaloids	161
A. Simple tryptamines	161
B. Stemmadenine	162
C. Ervatamine-type compounds	163
D. Vinblastine-type compounds	164
IV. Is the modified Polonovski reaction biomimetic?	167
References	168

CHAPTER 9

Biomimetic Conversion of Secologanin into Alkaloids

Richard T. Brown

I. Introduction	171
II. Strictosidine and vincoside	172

A. Syntheses <i>via</i> N(4)-benzylvincoside and its derivatives	172
B. "One-pot" syntheses from strictosidine and vincoside	175
C. Biosynthetic implications	179
III. Other syntheses of alkaloids from secologanin	180
A. Ipecac alkaloids	181
B. Cinchona alkaloids	181
IV. Conclusions	183
Acknowledgements	183
References	184

CHAPTER 10

Iminium Salts as Intermediates in the Biomimetic Syntheses of Indole Alkaloids

Henri-Philippe Husson

I. Introduction	185
II. The preparation of iminium ions	186
A. Oxidation of piperidines	187
B. Isomerisation of Δ^3 piperidines	188
C. Partial reduction of pyridinium salts	189
III. The heteroyohimbine alkaloids	190
IV. The ellipticine-olivacine series	192
V. The α -acyl indole alkaloids ervatamine and ervitsine series	195
VI. Synthesis of deplancheine	199
VII. Conclusions	199
References	200

CHAPTER 11

Synthetic Studies on Indole Alkaloids

Csaba Szántay, Gábor Blaskó, Katalin Honty, Lajos Szabó and László Töke

I. Introduction	202
II. Preparation of the key intermediate of structure (1)	203
III. Formation of the <i>allo</i> -pentacycle	206
IV. Synthesis of ($\pm$)-methyl-3- <i>iso</i> -deserpate, ($\pm$)-deserpidine and ($\pm$)-3- <i>epi</i> -17- <i>epi</i> -raunescine	212
V. Synthesis of raunescine stereoisomers with <i>normal</i> skeleton	214
Acknowledgements	216
References	217

CHAPTER 12

The Stereospecificity of Indole-alkaloid Transformations

E. Winterfeldt

I. The stereospecificity of indole-alkaloid transformations	219
Acknowledgements	228
References	228

CHAPTER 13

Approaches to the Synthesis of Apparicine

J. A. Joule, M. S. Allen, D. I. Bishop, M. Harris, G. J. Hignett, D. I. C. Scopes
and N. D. V. Wilson

I. Introduction: Structure, stereochemistry, biosynthesis and biological activity	229
II. Ring skeleton synthesis by the sequence $AB \rightarrow ABD \rightarrow ABCD$	232
A. Preparation of 2-acylindoles	232
B. Insertion of the C-6 methylene. Synthesis of model tetracyclic ketone 1,4,5,7-tetrahydro-2,5-ethano-2H-azocino [4,3-b] indol-6(3H)-one	234
C. Failure of extrapolation to include side-chain	236
III. Approach to ring skeleton synthesis by the sequence $AB \rightarrow ABC \rightarrow ABCD$	238
A. Azocino [3,4-b] indoles	238
B. Azocino [4,3-b] indoles	243
References	246

CHAPTER 14

The Biosynthesis of Ergot Alkaloids (or the story of the unexpected)

Heinz G. Floss

I. Introduction	249
II. Isoprenylation of tryptophan	251
III. Formation of the ergoline ring	252
IV. Assembly of the peptide portion	263
V. Conclusions	269
Acknowledgements	269
References	269

CHAPTER 15

Production of Ergot Alkaloids by Fermentation

C. Spalla

I. Introduction	271
II. Production of alkaloids with <i>Claviceps</i>	271
A. The genus <i>Claviceps</i>	271
B. Production in parasitic conditions	273
C. Production in saprophytic conditions	273
III. Aspects of the peptidic alkaloid fermentation	278
A. Morphology of the producing strains	278
B. Genetics of the producing strains	279
C. Qualitative changes in the alkaloids produced	281
References	283

CHAPTER 16

Recent Advances in Ergot Pharmacology

E. Flückiger

I. Introduction	285
II. Prolactin secretion inhibition	285
A. Active structures	286
B. Mechanism of action	287
III. Central actions	289
IV. Comparison of activities at the pituitary and CNS levels	289
References	290

CHAPTER 17

The Spectrum of Biological Activities of Indole Alkaloids

Norbert Neuss

I. Introduction	294
II. Indole	295
III. Indolyl amines	295
IV. Harmant-type	296
V. Ellipticine-type	297
VI. <i>Rauvolfia</i> alkaloids	298
A. Yohimbine	298
B. Reserpine	299
C. Ajmalicine	300
D. Ajmaline	301
VII. Sarpagine-type	301
VIII. Oxindole alkaloids	301
IX. Ibogamine-type	303
X. Catharanthine	303
XI. 2-Acyl indoles	304
XII. Eburnamine-type	304
A. Vincamine	304
XIII. <i>Aspidosperma</i> alkaloids	305
XIV. <i>Catharanthus roseus</i> alkaloids	306
XV. Dimeric alkaloids	307
A. Vincleukoblastine and Leurocristine	307
B. Leurosine and Leurosidine	308
C. Vindesine	308
D. C-Toxiferine I	309
XVI. <i>Strychnos</i> alkaloids	310
A. Strychnine	310
XVII. Miscellaneous alkaloids	310
A. Physostigmine	310
B. Verticillin "A"	311
XVIII. Concluding remarks	311
Acknowledgements	311
References	311

CHAPTER 18

Recent Highlights in Indole Alkaloid and Mould Metabolite Chemistry

J. E. Saxton

I. Introduction	315
II. Mould metabolites	315
III. Indole alkaloids from higher plants	319
A. Indoloquinazoline alkaloids	319
B. <i>Aristolelia</i> alkaloids	320
C. Heteroyohimbines and E- <i>seco</i> alkaloids	323
D. Yohimbine-type alkaloids	323
E. Ajmaline-type alkaloids	326
F. Goniomine	328
G. <i>Gardneria-Strychnos</i> alkaloids	329
H. <i>Pandacea</i> alkaloids	330
I. Ellipticine	330
J. <i>Aspidosperma</i> -type alkaloids	331
K. Vincamine	339
L. Catharanthine-Ibogamine-type dimers	340
M. Bis-indole alkaloids	341
References	347
Author Index	351
Subject Index	365
