Preface xiii

Preface to the First Edition xv

PART I

FUNDAMENTALS OF MOLECULAR BIOTECHNOLOGY 1

CHAPTER 1

The Development of Molecular Biotechnology 3

The Emergence of Molecular Biotechnology 3

Recombinant DNA Technology 5

Commercialization of Molecular Biotechnology 6

Concerns and Consequences 10

SUMMARY 12

REFERENCES 13

REVIEW QUESTIONS 13

CHAPTER 2

DNA, RNA, and Protein Synthesis 14

Structure of DNA 14

DNA Replication 18

Decoding Genetic Information: RNA and Protein 20

Translation 26

Regulation of mRNA Transcription in Bacteria 33

Regulation of mRNA Transcription in Eukaryotes 37

Protein Secretion Pathways 40

SUMMARY 45

REFERENCES 46

REVIEW QUESTIONS 46

CHAPTER 3

Recombinant DNA Technology 47

Restriction Endonucleases 49

Plasmid Cloning Vectors 57

Plasmid Cloning Vector pBR322 59

Transformation and Selection 60

Other Plasmid Cloning Vectors 63

Creating and Screening a Library 68

Making a Genomic Library 68

Screening by DNA Hybridization 70

Screening by Immunological Assay 76

Screening by Protein Activity 78

Cloning DNA Sequences That Encode Eukaryotic Proteins 80

Vectors for Cloning Large Pieces of DNA 86

Bacteriophage λ Vectors 86

Cosmids 90

High-Capacity Bacterial Vector Systems 92

Genetic Transformation of Prokaryotes 92

Transferring DNA into *E. coli* 92

Electroporation 93

Conjugation 94

SUMMARY 95

REFERENCES 96

REVIEW QUESTIONS 97

CHAPTER 4

Chemical Synthesis, Amplification, and Sequencing of DNA 98

Chemical Synthesis of DNA 98

The Phosphoramidite Method 99

Uses of Synthesized Oligonucleotides 103

Polymerase Chain Reaction 108

PCR Amplification of Full-Length cDNAs 113

Gene Synthesis by PCR 113

DNA-Sequencing Techniques 117

Dideoxynucleotide Procedure for Sequencing DNA 118

Primer Walking 124

Pyrosequencing 125

Sequencing Using Reversible Chain Terminators 128

Sequencing by Ligation 131

Large-Scale DNA Sequencing 133

Shotgun Cloning Strategy for Sequencing Genomes 133

Cycle Array Sequencing 136

SUMMARY 142

REFERENCES 143

REVIEW QUESTIONS 143

CHAPTER 5

Bioinformatics, Genomics, and Proteomics 146

Molecular Databases 146

Metagenomics 148

Functional Genomics 154

DNA Microarray Technology 155

Serial Analysis of Gene Expression 160

Proteomics 164

Separation and Identification of Peptides 165

Protein Expression Profiling 169

Protein Microarrays 172

Protein-Protein Interaction Mapping 181

SUMMARY 189

REFERENCES 190

REVIEW QUESTIONS 191

CHAPTER 6

Manipulation of Gene Expression in Prokaryotes 195

Gene Expression from Strong and Regulatable Promoters 196

Regulatable Promoters 196

Increasing Protein Production 200

Large-Scale Systems 201

Expression in Other Microorganisms 204

Fusion Proteins 205

Uses of Fusion Proteins 206

Cloning of Fusion Proteins 208

Surface Display 218

Translation Expression Vectors 212

Increasing Protein Stability 215

Intrinsic Protein Stability 215

Facilitating Protein Folding 217

Coexpression Strategies 219

Overcoming Oxygen Limitation 220

Use of Protease-Deficient Host Strains 220

Bacterial Hemoglobin 220

Limiting Biofilm Formation 221

DNA Integration into the Host Chromosome 222

Removing Selectable Marker Genes 227

Increasing Secretion 228

Secretion into the Periplasm 229

Secretion into the Medium 230

Metabolic Load 233

SUMMARY 235

REFERENCES 236

REVIEW QUESTIONS 238

CHAPTER 7

Heterologous Protein Production in Eukaryotic Cells 240

Posttranslational Modification of Eukaryotic Proteins 240

General Features of Eukaryotic Expression Systems 242

Fungus-Based Expression Systems 244

Saccharomyces cerevisiae Expression Systems 244

Pichia pastoris Expression Systems 253

Other Yeast Systems 255

Filamentous Fungal Systems 259

Baculovirus-Insect Cell Expression Systems 261

Baculovirus Expression Vectors 263

Increasing the Yield of Recombinant Baculovirus 264

Integration of Target Genes into Baculovirus by Site-Specific Recombination 265

Mammalian Glycosylation and Processing of Precursor Proteins in Insect Cells 267

Production of Multimeric Complexes Using Baculovirus 270

Mammalian Cell Expression Systems 271

Vector Design 272

Baculovirus Vectors for Protein Production in Mammalian Cells 275

Selectable Markers for Mammalian Expression Vectors 278

Engineering Mammalian Cell Hosts for Enhanced Productivity 279

Plasmid Integration and Chromosomal Environment 282

SUMMARY 284

REFERENCES 287

REVIEW QUESTIONS 288

CHAPTER 8

Directed Mutagenesis and Protein Engineering 290

Directed Mutagenesis Procedures 291

Oligonucleotide-Directed Mutagenesis with M13 DNA 292

Oligonucleotide-Directed Mutagenesis with Plasmid DNA 295

PCR-Amplified Oligonucleotide-Directed Mutagenesis 297

Error-Prone PCR 298

Random Mutagenesis with Degenerate Oligonucleotide Primers 298

Random Insertion/Deletion Mutagenesis 301

DNA Shuffling 303

Mutant Primers with Unusual Amino Acids 304

Protein Engineering 305

Adding Disulfide Bonds 305

Changing Asparagine to Other Amino Acids 310

Reducing the Number of Free Sulfhydryl Residues 311

Increasing Enzymatic Activity 312

Modifying Metal Cofactor Requirements 316

Decreasing Protease Sensitivity 317

Modifying Protein Specificity 318

Increasing Enzyme Stability and Specificity 321

Altering Multiple Properties 325

SUMMARY 327

REFERENCES 327

REVIEW QUESTIONS 328

PART II

MOLECULAR BIOTECHNOLOGY OF MICROBIAL SYSTEMS 331

CHAPTER 9

Molecular Diagnostics 333

Immunological Diagnostic Procedures 334

ELISA 335

Monoclonal Antibodies 337

Formation and Selection of Hybrid Cells 337

Identification of Specific Antibodies Producing Hybrid Cell Lines 339

Biofluorescent and Bioluminescent Systems 341

Colony Fluorescent Protein 341

Lactiferous 342

Microbial Biosensors 343

Nucleic Acid Diagnostic Systems 345

Hybridization Probes 346

Diagnosis of Malaria 347

Detection of *E. coli* 349

Nonradioactive Hybridization Procedures 350

Molecular Beacons 352

DNA Fingerprinting 353

RAID 355

Real-Time PCR 358

Immunoreactive Real-Time PCR 359

Ancestry Determination 361

Animal Species Determination 361

Automated DNA Analysis 364

Molecular Diagnosis of Genetic Disease 365

Screening for Cystic Fibrosis 366

Sickle-Cell Anemia 367

The PCR/CEA Procedure 368

Padlock Probes 374

Genotyping with Fluorescence-Labeled PCR Primers 374

TaqMan Assay 375

SUMMARY 375

REFERENCES 376

REVIEW QUESTIONS 377

CHAPTER 10

Protein Therapeutics 379

Pharmaceuticals 380

Isolation of Interferon cDNAs 380

Human Interferons 381

Human Growth Hormone 381

Tumor Necrosis Factor Alpha 388

Enzymes 389

DNase I 389

Alginase Lyase 390

Phenylalanine Ammonia Lyase 392

α_1 -Antitrypsin 393

Glycosidases 394

Lactic Acid Bacteria 395

Interleukin-10 396

Leptin 397

An HIV Inhibitor 398

Monoclonal Antibodies 399

Structure and Function of Antibodies 400

Preventing Rejection of Transplanted Organs 402

Recombinant Antibodies 403

Hybrid Human-Mouse Monoclonal Antibodies 403

Human Monoclonal Antibodies 406

Antibody Fragments 408

Combinatorial Libraries of Antibody Fragments 411

A Combinatorial Library of Full-Length Antibodies 415

Shuffling CDR Sequences 416

Chemically Linked Monoclonal Antibodies 417

Dual-Variable-Domain Antibodies 420

Artificial Antibodies 421

SUMMARY 421

REFERENCES 422

REVIEW QUESTIONS 424

CHAPTER 11

Nucleic Acids as Therapeutic Agents 426

Antisense RNA 426

Antisense Oligonucleotides 428

Ribozymes 434

Deoxyribozymes 436

Chimeric RNA-DNA Molecules 437

Aptamers 437

Interfering RNAs 440

Principles 440

Applications 442

Antibody Genes 443

Nucleic Acid Delivery 444

Human Gene Therapy 444

Targeting Systems 451

SUMMARY 456

REFERENCES 456

REVIEW QUESTIONS 458

CHAPTER 12

Vaccines 459

Subunit Vaccines 463

Herpes Simplex Virus 463

Foot-and-Mouth Disease 464

Cholera 466

SARS 468

Staphylococcus aureus 467

Human Papillomavirus 468

Peptide Vaccines 469

Foot-and-Mouth Disease 470

Malaria 472

Genetic Immunization: DNA Vaccines 472

Delivery 472

Dental Caries 479

Attenuated Vaccines 481

Cholera 481

Salmonella Species 482

Leishmania Species 484

Herpes Simplex Virus 485

Vector Vaccines 486

Vaccines Directed against Viruses 486

Vaccines Directed against Bacteria 492

Bacteria as Antigen Delivery Systems 494

SUMMARY 497

REFERENCES 497

REVIEW QUESTIONS 499

CHAPTER 13

Synthesis of Commercial Products by Recombinant Microorganisms 501

Restriction Endonucleases 501

Lipase 505

Small Biological Molecules 506

Synthesis of L-Ascorbic Acid 507

Microbial Synthesis of Indigo 512

Synthesis of Amino Acids 514

Microbial Synthesis of Lycopene 519

Increasing Succinic Acid Production 529

Antibiotics 521

Cloning Antibiotic Biosynthesis Genes 523

Modulating Gene Expression in *Streptomyces* 526

Synthesis of Novel Antibiotics 527

Engineering Polyketide Antibiotics 529

Improving Antibiotic Production 531

Designer Antibiotics 534

Biopolymers 535

Xanthan Gum 535

Melanin 538

Adhesive Protein 539

Rubber 541

Polyhydroxyalkanoates 542

Hyaluronic Acid 543

SUMMARY 547

REFERENCES 547

REVIEW QUESTIONS 549

CHAPTER 14

Bioremediation and Biomass Utilization 551

Microbial Degradation of Xenobiotics 551

Genetic Engineering of Biodegradative Pathways 556

Manipulation by Transfer of Plasmids 557

Manipulation by Gene Alteration 559

Utilization of Starch and Sugars 569

Commercial Production of Fructose and Alcohol 570

Altering Alcohol Production 571

Improving Fructose Production 575

Silage Fermentation 576

Isopropanol Production 577

Engineering Yeast Transcription 578

Utilization of Cellulose 580

Lignocellulolysis 581

Components of Lignocellulose 582

Isolation of Prokaryotic Cellulase Genes 585

Isolation of Eukaryotic Cellulase Genes 586

Manipulation of Cellulase Genes 586

Zymomonas mobilis 589

Hydrogen Production 595

SUMMARY 596

REFERENCES 596

REVIEW QUESTIONS 598

CHAPTER 15

Plant Growth-Promoting Bacteria 599

Growth Promotion by Free-Living Bacteria 600

Decreasing Plant Stress 604

Increasing Phosphorus Availability 606

Biocontrol of Pathogens 608

Siderophores 609

Antibiotics 612

Enzymes 614

for Nucleation and Antifungal Proteins 614

Ethylene 617

Root Colonization 618

Nitrogen Fixation 619

Nitrogenase 621

Components of Nitrogenase 621

Genetic Engineering of the Nitrogenase Gene Cluster 622

Engineering Improved Nitrogen Fixation 628

Hydrogenase 630

Hydrogen Metabolism 631

Genetic Engineering of Hydrogenase Genes 632

Nodulation 635

Competition among Nodulating Organisms 635

Genetic Engineering of Nodulation Genes 635

Nodulation and Ethylene 640

Phytoremediation 641

Engineering Strains That Facilitate Growth 641

Engineering Degradative Plasmids 643

Engineering Bacterial Endophytes 644

Metals in the Environment 646

SUMMARY 648

REFERENCES 649

REVIEW QUESTIONS 651

CHAPTER 16

Microbial Insecticides 652

Insecticidal Toxin of *B. thuringiensis* 653

Mode of Action and Use 653

Toxin Gene Isolation 656

Engineering of *B. thuringiensis* Toxin Genes 660

Synthesis during Vegetative Growth 660

Broadening the Spectrum of Target Insects 663

Improving Delivery of a Mosquitocidal Toxin 666

Protecting Plant Roots 668

Protein Processing 670

Preventing the Development of Resistance 671

Improved Biocontrol 674

Baculoviruses as Biocontrol Agents 677

Mode of Action 677

Genetic Engineering for Improved Biocontrol 679

SUMMARY 681

REFERENCES 682

REVIEW QUESTIONS 684

CHAPTER 17	
Large-Scale Production of Proteins from Recombinant Microorganisms	685
Principles of Microbial Growth	687
Batch Fermentation	687
Fed-Batch Fermentation	689
Continuous Fermentation	691
Maximizing the Efficiency of the Fermentation Process	692

High-Density Cell Cultures	693
Increasing Plasmid Stability	695
Quiescent <i>E. coli</i> Cells	696
Protein Secretion	696
Reducing Aeration	698
Bioreactors	701
Typical Large-Scale Fermentation Systems	705
Two-Stage Fermentation in Tandem Airlift Reactors	706
Two-Stage Fermentation in a Single Stirred-Tank Reactor	708

Batch versus Fed-Batch Fermentation	706
Harvesting Microbial Cells	711
Disrupting Microbial Cells	714
Downstream Processing	717
Protein Stabilization	718
Large-Scale Production of Plasmid DNA	719
SUMMARY	720
REFERENCES	720
REVIEW QUESTIONS	722

PART III

MOLECULAR BIOTECHNOLOGY OF EUKARYOTIC SYSTEMS 723

CHAPTER 18	
Genetic Engineering of Plants: Methodology	725
Plant Transformation with the Ti Plasmid of <i>A. tumefaciens</i>	726
Ti Plasmid-Derived Vector Systems	730
Physical Methods of Transferring Genes to Plants	735
Microprojectile Bombardment	736
Chloroplast Engineering	738
Use of Reporter Genes in Transformed Plant Cells	741
Manipulation of Gene Expression in Plants	743
Isolation and Use of Different Promoters	745
Gene Targeting	749
Targeted Alterations in Plant RNA	747
Facilitating Protein Purification	748
Production of Marker-Free Transgenic Plants	750
Removing Marker Genes from Nuclear DNA	752
Removing Marker Genes from Chloroplast DNA	753
SUMMARY	755
REFERENCES	756
REVIEW QUESTIONS	757

CHAPTER 19	
Engineering Plants To Overcome Biotic and Abiotic Stress	759
Insect Resistance	759
Increasing Expression of the <i>B. thuringiensis</i> Protease	760
Other Strategies for Protecting Plants against Insects	764
Preventing the Development of <i>B. thuringiensis</i> -Resistant Insects	770
Virus Resistance	773
Viral Coat Protein-Mediated Protection	775
Protection by Expression of Other Genes	779
Herbicide Resistance	782
Fungal and Bacterial Resistance	787
Oxidative Stress	792
Salt and Drought Stress	793
Fruit Ripening and Flower Wilting	796
SUMMARY	799
REFERENCES	800
REVIEW QUESTIONS	802

CHAPTER 20	
Engineering Plant Quality and Proteins	803
Modification of Plant Nutritional Content	803
Amino Acids	805
Lipids	805
Vitamins	808
Iron	813
Phosphorus	814
Modification of Food Plant Taste and Appearance	815
Preventing Discoloration	815
Sweetness	817
Starch	818
Genetic Manipulation of Flower Pigmentation	821
Plants as Bioreactors	825
Antibodies	827
Polymers	830
Edible Vaccines	830
Plant Yield	832
Increasing Iron Content	833
Altering Lipid Content	834
Erect Leaves	836
Increasing Oxygen Content	837
Phytoremediation	838
SUMMARY	841
REFERENCES	841
REVIEW QUESTIONS	843

CHAPTER 21

Transgenic Animals 845

Transgenic Mice: Methodology 847

The Retroviral Vector Method 848

The DNA Microinjection Method 850

The Engineered Embryonic Stem Cell Method 851

Genetic Modification with the Cre-loxP Recombination System 856

RNA Interference 859

Transgenesis with High-Capacity Vectors 861

Transgenic Mice: Applications 863

Transgenic Disease Models: Alzheimer Disease 863

Using Transgenic Mice as Test Systems 865

Conditional Regulation of Transgene Expression 866

Conditional Control of Cell Death 870

Cloning Livestock by Nuclear Transfer 871

Transgenic Livestock 873

Production of Pharmaceuticals 873

Production of Donor Organs 875

Disease-Resistant Livestock 876

Improving Milk Quality 879

Improving Animal Production Traits 880

Transgenic Poultry 885

Transgenic Fish 886

SUMMARY 890

REFERENCES 890

REVIEW QUESTIONS 893

PART IV

MOLECULAR BIOTECHNOLOGY AND SOCIETY 895

CHAPTER 22

Regulating the Use of Biotechnology 897

Regulating Recombinant DNA Technology 898

Deliberate Release of Genetically Modified Microorganisms 900

Regulating Food and Food Ingredients 903

Food Ingredients Produced by Genetically Engineered Microorganisms 903

Genetically Modified Crops 907

Genetically Engineered Livestock 910

Patenting Biotechnology 911

Patenting in Different Countries 915

Patenting DNA Sequences 916

Patenting Multicellular Organisms 917

Patenting and Fundamental Research 918

SUMMARY 920

REFERENCES 920

REVIEW QUESTIONS 921

CHAPTER 23

Societal Issues in Biotechnology 923

Concerns about the Safety of Consuming Genetically Modified Foods 923

Alteration of the Nutritional Content of Food 924

Potential for Introducing Toxins or Allergens into Food 927

Potential for Transferring Transgenes from Food to Humans or Intestinal Microorganisms 930

Controversy about the Labeling of Genetically Modified Foods 931

Concerns about the Impact of Genetically Modified Organisms on the Environment 932

Impact on Biodiversity 932

Impact of the Bt Toxin on Nontarget Insects 933

Environmental Benefits of Genetically Modified Organisms 934

Economic Issues 935

Who Benefits from Molecular Biotechnology? 935

How Do Views about Genetically Engineered Food Affect Trade? 936

SUMMARY 937

REFERENCES 938

REVIEW QUESTIONS 939

Amino Acids of Proteins and Their Designations 941

Glossary 943

Index 973
