Foreword	vii
Preface	ix

Part I

Processes at the Cell and Organ Levels

1. Introduction to Metabolic Control

J. A. RAVEN

I. Introduction	3
II. Origins of Metabolic Control	4
III. Coarse Control	9
A. General Aspects of Coarse Control	9
B. Coarse Control of Photosynthesis	11
IV. Fine Control	15
A. General Aspects of Fine Control	15
B. Fine Control of Photosynthesis	17
V. Involvement of Cells in Supracellular Control Processes	20
VI. Conclusion	22
VIII. References	24

2. Equilibrium Models of Leaf Water Relations

B. ACOCK AND R. I. GRANGE

I. Introduction	29
II. The Forces Acting on Water in Plant Cells	30
A. Osmotic Potential and Turgor Pressure	30

	B. Matric Potentials	30
III.	A Comprehensive Model	32
IV.	The Scholander Model	33
	A. Matric Potentials	33
V.	Simulations of Leaf Water Relations	38
VI.	Conclusion	46
VII.	References	46

3. Organogenesis

J. H. M. THORNLEY

I.	Introduction	49
II.	The State-Variable Approach	49
III.	Initiation — Switches and Discontinuities	50
	A. Phase Transitions	52
	B. Process Transitions	52
	C. Biochemical Switches	53
	D. Catastrophes	55
IV.	Cell Division and Its Cessation	57
V.	The Production of Differentiating Cells	59
VI.	Cell Expansion and Maturity	60
VII.	Senescence	63
VIII.	Conclusion	64
IX.	References	65

4. Gas Exchange in Leaves

D. A. ROSE

I.	Introduction	67
II.	Diffusion in One, Two and Three Dimensions	67
	A. The Diffusion Equation	67
	B. Diffusion as a Function of Tissue Shape	69
	C. Characteristic Times for Diffusion	73
	D. Diffusion with Enzyme Kinetics	74
III.	Finite Element Resistance Models	75
IV.	Gas Exchange in Leaves	76
V.	References	78

5. The Use of Compartmental Analysis to Examine Effects of Plant Growth Regulating Substances on Transport of Assimilate in Wheat Leaves

J. E. DALE, A. BAUERMEISTER AND
E. J. WILLIAMS

I.	Introduction	79
II.	The Approach Using Compartmental Analysis	80
III.	Experimental Design	83
IV.	The One-Compartment Model	83
V.	The Two-Compartment Model	86
VI.	Interpretation and Conclusions	88
VII.	References	89

6. Tracer Experiments and Compartmental Modelling in Analysis of Plant Metabolism

J. G. PEARLMAN AND D. W. LAWLOR

I.	Introduction	91
II.	Characteristics of Systems	92
III.	Tracer Application	93
IV.	Relation Between Tracer and Non-Tracer Fluxes	95
V.	Examples	95
	A. Single Compartment System	96
	B. Complex Multicompartment Systems	99
	C. Tracer Analysis of Carbon Fluxes in a Complex Physiological System	101
VI.	Requirements for Carbon Flux Analysis	105
VII.	References	107

7. Optimal Root Systems in Terms of Water Uptake and Movement

N. D. FOWKES AND J. J. LANDSBERG

I.	Introduction	109
II.	Single Root Development	111
III.	Lateral Spacing	115
IV.	Comparisons Between Optimal Systems	120
V.	Consequences of Different Root Systems	120
VI.	Conclusion	122

VII.	References	124
VIII.	Appendix	124

Part II

Processes at the Plant and Crop Levels

8. Aerial Environment and Crop Growth

B. J. LEGG

I.	Introduction	129
II.	Statistical Methods	130
III.	Weather and Individual Crop Processes	132
	A. Photosynthesis	133
	B. Respiration	136
	C. Partitioning of Dry Matter Between Roots and Shoots	137
	D. Leaf Expansion	138
	E. Development and Senescence	139
	F. Yield — Relocation of Stored Assimilate	140
IV.	Simulation Models	141
V.	Conclusion	145
VI.	References	146

9. Models of Plant and Crop Water Use

P. G. JARVIS, W. R. N. EDWARDS AND H. TALBOT

I.	Introduction	151
II.	Transpiration	152
	A. Conflicting Views	152
	B. Transpiration Models	154
	C. Discussion of the Penman-Monteith Equation	163
III.	Liquid Flow in the Plant	172
	A. Axial Flow in the Xylem	172
	B. Lateral and Radial Flow	174
	C. Capacitance	176
IV.	Flow in the Soil	180
V.	System Models	180
	A. The Simple Approach	180
	B. Model for Tree Water Relations	186
VI.	Conclusion	190
VII.	References	190

10. Crop Response to Agronomic Practice

D. J. GREENWOOD

I.	Introduction	195
II.	Fertilizers for Vegetables	196
	A. The Model	196
	B. Potassium	197
	C. Phosphate	199
	D. Nitrogen	200
	E. Application	202
III.	Leaching of Nitrate	203
	A. Alternative Approaches to Modelling	203
	B. Plate Layer Models	203
	C. Simple Formulae	204
	D. Influence of Spatial Distribution of Nitrogen Down Soil and Crop Uptake	205
	E. Adjustment of N Fertilizer Level for Differences in Rainfall	205
IV.	Predicting Herbicide Breakdown in Soil	205
V.	Soil Water and Cultivation	207
VI.	Comprehensive Models	211
	A. Sub-models for Growth	212
	B. Partition of Assimilate	213
	C. Sub-models for N Concentration in Plants	213
VII.	Conclusions	214
VIII.	References	215

11. Modelling the Growth of Winter Lettuce

D. G. SWEENEY, D. W. HAND, G. SLACK AND J. H. M. THORNLEY

I.	Introduction	217
II.	Description of the Model	218
	A. Basic Growth Equations	218
	B. Substrate-dependence of Growth	219
	C. Light Interception, Photosynthesis, and Effective Leaf Area	219
	D. Effects of Temperature	221
	E. Mathematical Summary of the Model	221
	F. Difference Equation Form of Model	222
III.	Materials	223

IV.	Results	224
V.	Parameter Adjustment and Fitting	225
VI.	Conclusion	227
VII.	References	227
VIII.	Appendix: Definition of Symbols	227

12. The Use of Stochastic Modelling to Study the Influence of Stomatal Behaviour on Yield-Climate Relationships

H. G. JONES

I.	Stochastic Modelling in Crop Physiology	231
	A. Types of Stochastic Model	231
	B. The Need for Stochastic Models	232
	C. Using the Results from Stochastic Yield Models	234
	D. Stochastic Models Relating Yield to Climate	235
II.	Model for Investigating Optimal Stomatal Behaviour in Relation to Climate	237
	A. The Model	237
	B. Results of Simulation	239
	C. Conclusions	241
III.	References	243

Part III Techniques of Modelling

13. The Mathematical Description of Control Processes

D. A. CHARLES-EDWARDS 245

14. The Use and Misuse of Linear Regression Methods in Crop Modelling

D. O. CHANTER

I.	Introduction	253
II.	Empirical and Mechanistic Models	253
III.	The Linear Model	254
IV.	Common Misuses of Linear Regression	255
	A. The Cause and Effect Fallacy	255
	B. Extrapolation	256

781	C. Goodness of Fit	259
881	D. Outliers	260
881	E. Correlated Error Structures	262
921	F. Errors in the x Variate	264
921	G. Correlated x Variates	265
0 V.	Conclusion	266
0 VI.	References	266

15. The Use of Non-Linear Regression Methods in Crop Modelling

G. J. S. ROSS

I.	Introduction	269
	A. Linear but Curved Models	270
	B. Generalized Linear Models	270
	C. True Non-Linear Models	271
II.	Choice of Non-Linear Regression Models	271
	A. Reasons for Fitting Non-Linear Models	272
	B. Choice of Error Distribution	273
	C. Design of Experiments for Non-Linear Regression	274
III.	Interpretation of Results	275
	A. Choice of Parameters in a Model	275
	B. Assessing Goodness of Fit	276
	C. Standard Errors and Correlations of Parameter Estimates	277
	D. Comparison of Estimates when Correlations are Large	278
	E. Influence of Individual Observations on the Fitted Model	279
	F. Non-Linear Models and Failure to Fit	280
	G. Ambiguous Results in Non-Linear Regression	281
IV.	Conclusions	281
V.	References	282

16. The Fitted Curve in Plant Growth Studies

R. HUNT

I.	Introduction	283
II.	Models of Plant Growth	284
III.	Types of Fitted Curve	287
	A. Exponentials	287

	B. Polynomials	287
	C. Stepwise Polynomials	288
	D. High-Order Polynomials	288
	E. Logistics and Relatives	289
	F. Gompertz	289
	G. Richards's Function	290
	H. 'Tailor-Made' Functions	290
	I. Discontinuous Functions	291
	J. Splines	291
IV.	Conclusion	294
V.	References	295
	17. The Testing and Validation of Models	
	C. J. BELL	
I.	Introduction	299
II.	What is a Model?	300
III.	Empirical Models	300
IV.	Mechanistic and Interpretative Models	301
V.	Sensitivity Analysis	306
VI.	Multi-Parameter Models	306
VII.	Simulation Models	307
VIII.	Conclusion	308
IX.	Bibliography	309
Index		311
