

CONTENTS

Abstract	9
Zusammenfassung	11
Acknowledgements	13
1. Introduction	15
2. The study site	19
Geology and landforms	19
Quaternary history and human population	21
Principal design of the study	23
3. The climate of Mt. Elgon	25
Introduction	25
Methodology	27
Transect studies	27
Afroalpine conditions	27
Accuracy of data	28
Altitudinal gradients	30
Soil temperature	30
Precipitation	31
Microclimate and air temperatures along the Sasa transect	33
Afroalpine conditions	36
Radiation	36
Temperature	37
Humidity	42
Precipitation and evaporation	44
Wind	48
Discussion	50
The regional context	50
The significance of soil temperatures	51
The tropico-alpine climate	52
4. Soils of Mt. Elgon	56
Introduction	56
Methodology and classification	56
Results	57
Soils of the montane forest	57
Soils of the upper slopes	58
Discussion	62
5. Vegetation	64
Introduction	64
Methodology	65
Floristic inventory	65
Sampling design	67
Classification of plant communities	67
Numerical procedures	68
Floristics	68

The plant communities	69
Montane forests	70
Upper montane <i>Erica excelsa</i> forests	80
Ericaceous scrub and <i>Dendrosenecio</i> woodlands	86
Dry and mesic tussock grasslands	98
Communities of swamps and bogs	107
Spatial extent of vegetation zones on Mt. Elgon	117
General features of the two transects	117
The Sasa transect	118
The Koitoboss transect	123
6. Seasonal patterns - phenology of plant species and communities	128
Introduction	128
Methodology	128
Seasonality of standing biomass	130
Seasonal patterns in the foliage development	130
Results from the three main monitoring plots	130
Seasonal patterns in foliage development along Sasa transect	132
Seasonal patterns in flowering and fruiting - community level	134
Results from the three main monitoring plots	134
Flowering seasonality at various altitudes	136
Phenological patterns - species level	138
Afroalpine plants	140
Species of the montane belt	142
Discussion	144
7. Impact of fire	149
Introduction	149
Methodology	150
Sampling design	150
Data evaluation	151
Timing and spatial extent of fire	151
Changes in community composition	152
Community composition at the plots FBG and FGG	152
Community composition at the five plots in the Simu Valley	155
Examples from various afroalpine communities	156
Recovery of selected species	159
Recovery of <i>Dendrosenecio e. elgonensis</i>	159
<i>Erica trimera</i> and other <i>Erica</i> species	160
Various other species	162
Impact of fire on reproductive phenology	165
Results from the two monitoring plots	165
Phenological patterns in the upper Simu Valley	168
Discussion	169
Spatial and temporal extent of fires on Mt. Elgon	169
Evidence for fire on other East African mountains	170
Changes in community composition	171
Individual recovery rates	172
Impact of fire on phenology	175
Impact of fire on habitat conditions	175

8. Synthesis	177
The position of the timberline	177
Vegetation dynamics	179
The vegetation of the afroalpine belt of Mt. Elgon without human impact	182
Conclusions	184
References	186
Software	194
Appendix 1: Species List	195
Appendix 2: Soil profile descriptions	204
Appendix 3: List of vegetation samples	224
Appendix 4: Phytosociological tables	234
Plates	246
