Section II: Ecology and Management of the World's Semi-Arid Regions	7
Chapter 1. <i>Cattle ranching in the semi-arid savannas of East and Southern Africa</i> , by D.L. Barnes	9
Introduction	9
The environment	9
Climate	9
Vegetation	12
The significance of fire	18
Tsetse fly in the semi-arid savanna	20
Harvester termites	23
Present land-use and production methods	25
True pastoralists	25
Semi-pastoralists	26
Commercial ranching	27
The management of semi-arid savanna for cattle production	28
Selective use of vegetation	28
Responses to short-term climatic changes	29
Differences in the feeding value of vegetation types	30
The relative feeding value of savanna plants	31
Intensification of production	33
Responses to complete clearing	34
Partial clearing	35
Policy and problems in clearing	37
Alternatives to cattle production	38
Grazing and fire as manipulative tools	39
Grazing management	40
Conclusion	50
References	51
Chapter 2. <i>Game ranching in Africa</i> , by B.H. Walker	55
Introduction	55
Ecological characteristics of the semi-arid savannas	55
Vegetation	56

Animals	60
Past and present land-use	61
The theoretical basis of game ranching	63
Utilization of vegetation	63
Other considerations	71
Adaptations and productivity of game animals	72
Practical implications in game ranching	75
Conclusions	76
Recommendations	77
Short-term improvements	77
Long-term development	79
References	79
 <i>Chapter 3. Management of the semi-arid and arid rangelands of Australia, by A.D.</i>	
Wilson and R.D. Graetz	83
Introduction	83
A description of the arid lands	84
Climate	84
Relief and drainage	86
Soils	86
Vegetation	87
Fauna	87
History and structure of land-use	88
Early settlement	88
Modification of vegetation and land resources	90
Land tenure and size of holdings	90
Structural limitations to intensification	91
Transport	91
Interchange of cattle and sheep	92
Present management of the arid and semi-arid lands	93
Woodlands	93
The chenopod shrublands	98
Acacia shrublands	101
The tussock grasslands	104
The hummock grasslands	106
Conclusions	107
References	108
 <i>Chapter 4. Management of semi-arid ecosystems in Israel, by I. Noy-Meir and N.G.</i>	
Seligman	113
Introduction	113
Environment and biota	114
Climate	114
Geomorphology and soils	115
Hydrology	116
Vegetation	118
Fauna	118
History	120
Persistence amidst change	120
The limes of empires	120
Weak empires and nomad invasions	121
Settling nomads and local kingdoms	121

The old crop—livestock system	124
Definition	124
Land classification and tenure	125
The crops and their management	126
Livestock and grazing management	129
Use of wild plants and animals	133
Ecological evaluation of the traditional system	134
Production and human welfare	134
Stability	134
Effects of the transition	135
Recent changes in the Bedouin system	138
Ecological effects of recent changes	142
The new cropping system	145
Definition	145
Land classification and tenure	146
Crops and cultivars	146
Crop rotation	148
Cultivation	148
Fertilizer application	148
Supplementary irrigation and runoff storage	149
Weed, disease and pest control	150
Sowing	150
Harvest and post-harvest treatment	151
Livestock husbandry	151
Ecological evaluation	152
New integrated cropping grazing systems?	154
Are they necessary?	154
Social factors	154
Experiments to increase pasture production	155
Prospects of wider application	157
Other land-uses	157
References	159
 <i>Chapter 5. Utilization of grass- and shrublands of the south-western United States,</i> by C.H. Herbel	161
Introduction	161
Climate	161
Land, plant and animal resources	165
South-Western Plateaus and Plains Range and Cotton Region	165
Central Great Plains Winter Wheat and Range Region	170
Western Great Plains Range and Irrigated Region	173
Western Range and Irrigated Region	174
Past land-use	180
Present conditions	183
Recommended land-use practices	185
Grazing management	186
Seeding	191
Control of unwanted plants	193
Burning as a tool	195
Fertilization	197
Water-spreading	198
Game habitat	198
References	200

Chapter 6. Land-use in the southern margins of the Sahara, by G.E. Wickens and

L.P. White	205
Introduction	205
Environment	206
Climate	206
Geomorphology	208
Soils	210
Vegetation	211
Fauna	213
Agricultural systems	218
General	218
Crops	221
The ecological impact of agriculture	224
Livestock	227
Grazing	233
Forest products	235
Use and abuse of the environment	237
The 1965-1974 drought	239
References	240

Chapter 7. Ecology of the semi-arid regions of India with emphasis on land-use, by

J.S. Singh and M.C. Joshi	243
Introduction	243
Geographical limits	243
Climate	246
Geology	249
Soil	249
Biota	251
Man	251
Livestock and poultry	253
Wild fauna	255
Soil microbes	256
Vegetation and land-use	256
Plant climate	256
Woodland	257
Grassland	261
Cropland	266
Conclusions and recommendations	271
References	273

Chapter 8. Ecology and management of semi-arid ecosystems in Brazil, by G. Eiten

and R. Goodland	277
Introduction	277
Caatinga	278
Climate	278
Vegetation and soils	278
Past and present land-use	280
Cerrado	281
Climate and vegetation	281
Useful animals	287
Past and present land-use	287
Pasture improvement	296
References	299

<i>Chapter 9. Land-use of semi-deserts in the U.S.S.R., by M.P. Petrov</i>	301
Introduction	301
Natural features of the semi-deserts of the U.S.S.R.	302
Physical features	302
Climate	304
Soils	306
Vegetation	309
Fauna	310
Utilization of the natural resources	310
Animal husbandry and pasture economy	310
Agriculture	320
Protective afforestation in the semi-desert zone	321
Game and hunting	324
Mining, industry, urbanization and construction of transport facilities	325
Conclusions	326
References	327
 <i>Chapter 10. Land-use of semi-deserts in Central Asia, by M.P. Petrov</i>	329
Natural features of the semi-deserts	329
Physical features	329
Climate	331
Soils	333
Vegetation	333
Fauna	336
The use of natural resources	337
Animal husbandry and pasture economy	337
Agriculture	346
Game and hunting	347
Utilization of mineral resources, urbanization and transport facilities	348
Conclusion	348
References	349
 <i>Chapter 11. Management of natural vegetation in the semi-arid ecosystems of Mexico, by F. Medellin-Leal and A. Gomez-Gonzalez</i>	351
Introduction	351
Description of the ecosystems	354
Physiography and limits	354
Climate	356
Vegetation	356
Fauna	362
The human population	364
Ecosystem management	365
Historical background	365
Vegetation changes	366
Range management	369
Livestock	371
Utilization of wild plants for industry and human consumption	372
Recommended management practices	373
References	375
 Section III: Discussion	377
<i>Management principles for semi-arid ecosystems, by B.H. Walker</i>	379
Introduction	379

Determinants of semi-arid ecosystems	381
Management principles for semi-arid ecosystems	383
Management principles	383
General recommendations	387
References	388
Author Index	389

ACKNOWLEDGEMENTS

This book was conceived during the First International Congress of Ecology at The Hague in 1974. Its development has been gradual, and sometimes fitful, but this has been necessary to ensure some degree of cohesion between the different chapters.

I have been most fortunate in the choice of my co-authors, as all of them have co-operated willingly in the sometimes extensive changes that we eventually made. Editing the book has proved for me to be a tremendous education in the ecological processes and management of the semi-arid world, and for this I am extremely grateful to all of them.

Many people helped me in the preparation of the book, but I mention especially my assistant, Mrs. Joyce Clark, who typed and re-typed almost uncomplainingly, and did so much to put it all in order.

B.H. WALKER
August 1978
