<i>Preface</i>	xv

Part I The effectiveness of controlled release and delivery systems

1 Assessing the bioavailability of nutraceuticals	3
<i>R. M. Faulks and S. Southon, Institute of Food Research, UK</i>	
1.1 Introduction	3
1.2 Measuring absorption, metabolism and tissue targeting	5
1.3 Study design and interpretation	13
1.4 Other considerations	19
1.5 Health response	21
1.6 Implications of controlled absorption for product development	22
1.7 Future trends	24
1.8 Sources of further information and advice	24
1.9 References	25
2 Structure of the gastrointestinal mucus layer and implications for controlled release and delivery of functional food ingredients .	26
<i>G. Lafitte, Centre for Chemistry and Chemical Engineering, Sweden</i>	
2.1 Introduction	26
2.2 Understanding the structure of the gastrointestinal mucus layer	27
2.3 Implications of the mucin molecules and the mucus layer in controlled release and delivery of functional food ingredients	36

2.4	Conclusion	47
2.5	Acknowledgements	47
2.6	References	47
3	Testing the effectiveness of nutrient delivery systems	53
	<i>E. Acosta, University of Toronto, Canada</i>	
3.1	Introduction: a holistic view of delivery systems	53
3.2	Delivery systems: formulation, processing and post-processing	54
3.3	<i>In vivo</i> tests	70
3.4	<i>In vitro</i> tests	77
3.5	Future trends	95
3.6	Sources of further information and advice	96
3.7	References	97
4	Lyotropic liquid crystals as delivery vehicles for food ingredients	107
	<i>J. Barauskas, Institute of Biochemistry, Lithuania and T. Nylander, Lund University, Sweden</i>	
4.1	Introduction	107
4.2	Lyotropic liquid liquid crystals	109
4.3	Lamellar phase colloids	111
4.4	Nonlamellar liquid crystalline lipid-based nanoparticles	112
4.5	Future trends	125
4.6	Acknowledgements	126
4.7	References	126
Part II	Materials and techniques for controlled release and delivery of nutrients	
5	Structured lipids as delivery systems	135
	<i>E. M. Hernandez, OmegaPure Technology and Innovation Center, USA</i>	
5.1	Introduction	135
5.2	Synthesis of structured lipids	138
5.3	Nutrition, absorption, transport and metabolism of structured lipids	140
5.4	Foods applications of structured lipids	141
5.5	Structured lipids in drug delivery	143
5.6	References	146
6	Micro- and nano-emulsions for delivery of functional food ingredients	149
	<i>N. Garti and I. Yuli-Amar, The Hebrew University of Jerusalem, Israel</i>	
6.1	Introduction	149
6.2	Microemulsions	152

6.3	Loaded microemulsions	162
6.4	Bioavailability of nutraceuticals	172
6.5	Microemulsions as microreactors	174
6.6	Conclusions	179
6.7	References	179
7	Emulsion droplet interfacial engineering to deliver bioactive lipids into functional foods	184
	<i>L. A. Shaw, H. Faraji, T. Aoki, D. Djordjevic, D. McClements and E. A. Decker, University of Massachusetts, USA</i>	
7.1	Introduction	184
7.2	Dietary ω -3 fatty acids	185
7.3	Dietary ω -3 fatty acids and health	186
7.4	Potential for ω -3 fatty acids in functional foods	188
7.5	Mechanisms of lipid oxidation	190
7.6	Lipid oxidation in emulsions	193
7.7	Interfacial engineering	194
7.8	Electrostatic layering in oil-in-water emulsions	196
7.9	Microencapsulation of oil-in-water emulsion systems	198
7.10	Emulsion droplet engineering to stabilize ω -3 fatty acids	200
7.11	Conclusions	202
7.12	References	203
8	Lipid self-assembled particles for the delivery of nutraceuticals	207
	<i>O. Ramon and D. Danino, Technion – Israel Institute of Technology, Israel</i>	
8.1	Introduction	207
8.2	Structure and properties of lipids	208
8.3	Self-assembly and microstructure of lipid systems	209
8.4	Liposomes	211
8.5	Cubic and hexagonal mesophases and their dispersed nanoparticles	217
8.6	Future trends	224
8.7	References	225
9	Complexes and conjugates of biopolymers for delivery of bioactive ingredients via food	234
	<i>Y. D. Livney, Technion – Israel Institute of Technology, Israel</i>	
9.1	Introduction	234
9.2	Complexes and coacervates	236
9.3	Conjugates – covalently bonded biopolymers	243
9.4	Complexes of a protein with a polysaccharide-protein conjugate	245
9.5	Future trends	246

9.6	Sources of further information and advice	246
9.7	References	246
10	Food-protein-derived materials and their use as carriers and delivery systems for active food components	251
	<i>M. Subirade and L. Chen, Laval University, Canada</i>	
10.1	Introduction	251
10.2	Food protein hydrogels and related networks as nutraceutical carriers	252
10.3	Food protein micro- and nanoparticles	258
10.4	Future trends	270
10.5	Sources of further information and advice	271
10.6	Acknowledgements	271
10.7	References and further reading	271
11	Starch as an encapsulation material to control digestion rate in the delivery of active food components	279
	<i>E. Shimoni, Technion – Israel Institute of Technology, Israel</i>	
11.1	Introduction	279
11.2	Uses of starch to control delivery in microencapsulation	280
11.3	Starch as nanoencapsulation material	285
11.4	Conclusion	288
11.5	References	289
 Part III Delivery and controlled release of particular nutraceuticals		
12	Encapsulation and controlled release of antioxidants and vitamins	297
	<i>C. M. Sabliov and C. E. Astete, Louisiana State University Agricultural Center, USA</i>	
12.1	Introduction	297
12.2	Antioxidants and vitamins in protecting human health	298
12.3	Advantages of encapsulation over traditional delivery methods	304
12.4	Top-down techniques used for encapsulation of antioxidants and vitamins in polymeric nanoparticles	309
12.5	Characterization methods	313
12.6	Controlled release of antioxidants and vitamins	313
12.7	Conclusions	317
12.8	Future trends	318
12.9	References	319

13 Encapsulation and controlled release of folic acid	331
<i>K. Kailasapathy, University of Western Sydney, Australia</i>	
13.1 Introduction	331
13.2 Encapsulation technologies for folates	334
13.3 Controlled release of folate in the gastrointestinal system ...	337
13.4 Applications in functional foods	338
13.5 Future trends	340
13.6 References	341
14 Encapsulation of probiotics	344
<i>C. P. Champagne, Agriculture and Agri-Food Canada, Canada and K. Kailasapathy, University of Western Sydney, Australia</i>	
14.1 Introduction	344
14.2 Encapsulation technologies for probiotics	346
14.3 Applications in nutraceuticals	354
14.4 Applications in functional foods	358
14.5 Future trends	363
14.6 Sources of further information and advice	364
14.7 References	364
15 Encapsulation of fish oils	370
<i>S.-J. Lee, Massey University, New Zealand and D. Y. Ying, HortResearch, New Zealand</i>	
15.1 Introduction	370
15.2 Encapsulation technologies used to deliver fish oils	377
15.3 Using encapsulated fish oils in food products	389
15.4 Suppliers of microencapsulated fish oil powder	393
15.5 Future trends	394
15.6 Sources of further information and advice	395
15.7 References	395
16 Encapsulation approaches for proteins	404
<i>A. Millqvist-Fureby, YKI Institute for Surface Chemistry, Sweden</i>	
16.1 Introduction	404
16.2 Solid formulations for proteins	405
16.3 Surface formation in drying	408
16.4 Coating in spray drying	411
16.5 Polyelectrolyte microcapsules for protein encapsulation	416
16.6 Summary and future trends	421
16.7 References	422

Part IV Regulatory issues and future trends

17 Regulatory aspects of nutrient delivery systems	429
<i>E. Acosta, University of Toronto, Canada</i>	
17.1 Introduction	429
17.2 Selection of ingredients	430
17.3 Stability of the product	439
17.4 Bioavailability of the active ingredient	443
17.5 Future trends	447
17.6 Sources of further information and advice	448
17.7 References	448
18 The future of controlled release and delivery technologies	450
<i>N. Garti, The Hebrew University of Jerusalem, Israel</i>	
18.1 Introduction	450
18.2 The food additives	454
18.3 Bioavailability and performance – the need for new vehicles .	456
18.4 Bioavailability	458
18.5 Nanoscience, nanovehicles, and controlled release	459
18.6 Specific targets	459
18.7 The future of controlled release systems	460
18.8 Encapsulation with organogels and lyotropic liquid crystals .	462
18.9 Reactivity at interfaces	463
18.10 Conclusions	463
18.11 References	463
<i>Index</i>	465
