Chapter 1

The Modern Theory of Contact Angles and the Hydrogen Bond Components of Surface Energies

Robert J. Good and Carel J. van Oss

1. Introduction	1
2. Acid-Base Interactions and the New Surface Parameters	3
3. Contact Angles	7
4. Application of the Lewis Acid-Base Parameters to Contact Angles in Practical Systems	11
5. Acidic and Basic Parameters of Selected Solid Surfaces	14
6. Discussion of the General Magnitudes of the $\gamma^{\oplus}$ and $\gamma^{\ominus}$ Parameters	16
7. Negative Interfacial Free Energy	18
7.1. Difference between Interfacial Tension and Interfacial Free Energy ..	18
7.2. Liquid-Solid Interfaces	19
8. An Apparent Anomaly That Arises from Certain Observed Contact Angle Data	20
9. Critique of Some Other Methodologies	22
9.1. Use of Liquid Mixtures	22
9.2. The "Equation of State" Interfacial Theory	22
10. A Note on Contact-Angle Measurement	23
10.1. Hysteresis	23
10.2. The Drop Size Effect	24
Acknowledgment	25
References	25

Chapter 2

The Long-Range Attraction between Macroscopic Hydrophobic Surfaces

H. K. Christenson

1. Introduction	29
1.1. Background	29
1.2. The Hydrophobic Effect between Nonpolar Solute Molecules	30
1.3. The Interfacial Energy between Water and Hydrocarbon	31
1.4. Cavitation	31

2. Indirect Observations of the Hydrophobic Attraction	32
3. Direct Force Measurements	33
3.1. The Surface Force Apparatus	33
3.2. Preparation of Hydrophobic Surfaces	33
3.3. Interpretation of Direct Force Measurements	34
4. The Hydrophobic Attraction between Adsorbed Monolayers	35
4.1. Initial Experiments—CTAB Monolayers	35
4.2. Further Work on Adsorbed Monolayers	36
4.3. Cavitation between Adsorbed Surfactant Monolayers	37
5. The Hydrophobic Attraction between Deposited Monolayers	37
5.1. Weakly Charged Monolayers	37
5.2. Neutral Monolayers	39
5.3. Cavitation between Deposited Monolayers	42
5.4. The Electrolyte Dependence of the Hydrophobic Attraction	44
6. The Hydrophobic Attraction between Chemically Hydrophobed Surfaces ..	46
7. Theory	47
8. Remaining Problems and Future Research	48
References	50

Chapter 3

High- and Medium-Energy Surfaces: Ultrahigh Vacuum Approach

Malcolm E. Schrader

1. Introduction	53
1.1. High- and Low-Energy Surfaces	53
1.2. Contamination	53
1.3. Theory of Interfacial Interaction	54
2. Metals	55
2.1. Theory of Interaction at the Water–Metal Interface	55
2.2. Gold	55
2.3. Ultrahigh Vacuum Method of Contact Angle Measurement: Water on Gold	56
2.4. Ultrahigh Vacuum Contact Angle Measurements on Copper and Silver	58
2.5. Surface Segregation	59
2.6. Surface Structure	60
2.7. Theoretical Interpretation of Experimental Results: Impact of New Hamaker Coefficient Calculations	60
2.8. Conclusions on Metal Wettability by Water	62
3. Glasses	62
3.1. Relative Humidity Experiments at Atmospheric Pressure	62
3.2. Experiments in Conventional Vacuum	63
3.3. Ultrahigh Vacuum Silanol–Siloxane	63
3.4. Discussion	65
3.5. Conclusions: Apparent Nature of Glass Surface Based on Vacuum Experiments Alone	66
3.6. Contact Angles on Clay Minerals	66

4. Graphite: A Medium-Energy Surface	67
4.1. Introduction	67
4.2. Experimental Approach: UHV-AES-LEED	67
4.3. Results	68
4.4. Discussion	69
5. Conclusions	70
References	71

Chapter 4

Determination of the Surface Energy of Solids by the Two-Liquid-Phase Method

Jacques Schultz and Michel Nardin

1. Introduction	73
2. Principle of the Two-Liquid-Phase Method	75
2.1. Principle of the Method	75
2.2. Wetting Criteria	76
2.3. Application of a Model Surface: Mica	77
3. Characterization of High-Energy Surfaces	79
3.1. Aluminum	79
3.2. Glass	81
3.3. Carbon	83
3.4. Fibers	84
4. Characterization of Low-Energy Surfaces	91
4.1. Orientation Phenomenon	92
4.2. Hysteresis Phenomenon	94
5. Conclusion	98
References	98

Chapter 5

The Equation of State Approach to Interfacial Tensions

J. K. Spelt, D. Li, and A. W. Neumann

1. Introduction	101
2. Existence of an Equation of State	104
2.1. Interfacial Gibbs-Duhem Equations	104
2.2. Phase Rule for Interfacial Systems	105
3. Formulation of the Equation of State	108
3.1. Role of Adsorption	108
3.2. Equation of State—Original Formulation	110
3.3. Equation of State—Alternative Formulation	114
4. Experimental Support for the Equation of State	119
4.1. Direct Force Measurements	119
4.2. Solidification Front Experiments	120
4.3. Contact Angles for Different Liquids	123
4.4. Sedimentation Volumes	124

4.5. Particle Suspension Layer Stability	128
4.6. Verification of the Equation of State Concept and Comparison with the Surface Tension Component Approach	130
5. Alternative Equations of State	132
5.1. Sedimentation Volumes	133
5.2. Solidification Front Technique	134
5.3. Contact Angles	135
6. The Possibility of Negative Solid-Liquid Interfacial Tensions	136
7. Future Development of the Equation of State	139
Appendix	140
References	141

Chapter 6

Thermal Reconstruction of the Functionalized Interface of Polyethelene Carboxylic Acid and Its Derivatives

Gregory S. Ferguson and George M. Whitesides

1. Introduction	143
1.1. Surfaces, Interfaces, and Interphases	144
1.2. Synthesis of Surface-Modified Polyethelene and Nomenclature Used in Describing These Systems	145
1.3. The Role of Thermodynamics in Determining Interfacial Properties and the Kinetics of Their Approach to Equilibrium	146
2. Wettability as a Probe of Surface Structure	147
2.1. Contact Angles: Definitions and Background	147
2.2. Reconstruction of the Surface of PE-CO ₂ H: Initial Observations	149
2.3. Model Systems for Studies of Wetting: Self-Assembled Monolayers (SAMs) of Alkanethiols on Gold	150
2.4. Wetting Experiments on PE-X	154
2.5. Sensitivity of Wetting to Small Conformational Changes within the θ Interphase	155
3. Reconstruction of the Interface of PE-CO ₂ H and Derivatives on Heating	157
3.1. Comparison of Results from Wetting and XPS	157
3.2. Results from ATR-IR	158
3.3. Kinetic Model for Reconstruction of the Interface of PE-CO ₂ H	160
3.4. Reconstruction of the Interface of Derivatives of PE-CO ₂ H	164
3.5. Reconstruction of the Interface of PE-CO ₂ H and Derivatives on Heating in Contact with Liquids	166
3.6. Recovery of Polar Functional Groups from the Sub- θ Interphase	169
3.7. Depth Profiling of PE-CO ₂ H and Derivatives during the Thermal Reconstruction of Their Interfaces	169
3.8. Is Interfacial Strain a Driving Force for the Reconstruction of the Surface of PE-CO ₂ H?	171
4. Conclusions	172
5. Acknowledgments	175
References	175

Chapter 7

Block Copolymers and Hydrophilicity*Atsushi Takahara*

1. Introduction	179
2. Characterization Methods of Polymer Hydrophilicity	180
2.1. Spreading Phenomena	180
2.2. Surface Characterization Techniques	182
3. Diblock and Triblock Copolymers	185
3.1. Polystyrene-Polydiene Diblock and Triblock Copolymers and Their Derivatives	185
3.2. Polystyrene-Polytetrahydrofuran Diblock and Triblock Copolymers ..	187
3.3. Polystyrene-Polydimethylsiloxane Diblock and Triblock Copolymers	187
3.4. Polystyrene-Poly(ethylene oxide) Diblock Copolymer	188
3.5. Poly(hydroxyethyl methacrylate)-Polystyrene Triblock Copolymer ...	188
3.6. Block Copolypeptides	189
3.7. A-B-C Triblock Copolymers	192
4. Charge Mosaic Membrane	193
5. Multiblock Copolymers	195
5.1. Segmented Polyurethanes	196
5.2. Other Multiblock Copolymers	202
6. Block Copolymers with Graft Side Chains	204
7. Conclusion	209
Acknowledgment	210
References	210

Chapter 8

Wettability and Bioadhesion in Ophthalmology*Frank J. Holly*

1. Introduction	213
2. Basic Considerations	214
2.1. Thin Aqueous Film Stability	214
2.2. Meniscus-Induced Local Thinning	216
2.3. Formation of Lipid Layers on Water	217
2.4. Water Wettability of Solid Surfaces	218
2.5. Hydrophilic-Hydrophobic Surface Transition	220
3. Applications to the Ocular System	222
3.1. Preocular Tear Film	222
3.2. Contact Lens Wear	229
3.3. Adhesion and Erosion of Corneal Epithelium	234
3.4. Retinal Adhesion and Its Failure	239
3.5. Wetting in Intraocular Surgery	242
4. Conclusions	245
References	246

Chapter 9

Wettability of Surfaces in the Oral Cavity*H. J. Busscher*

1. The Importance of Surfaces in the Oral Cavity	249
2. Wettability of Oral Surfaces	250
2.1. Enamel and Dentine Surfaces	251
2.2. Oral Microbial and Mucosal Surfaces	252
2.3. Surfaces of Restorative Materials	253
3. Surface Free Energies of Oral Tissues	254
4. Oral Adhesion Phenomena and Surface Free Energies	256
5. Modification of the Physicochemical Properties of Tooth Surfaces	259
6. Concluding Remarks	259
Acknowledgments	259
References	260

Chapter 10

Wettability as a Surface Signal for Sessile Aquatic Organisms*James W. Mihm and George Loeb*

1. Introduction	263
2. Aquatic Organisms	263
2.1. Reversible Attachment	264
2.2. Permanent Attachment	264
3. Wettability	264
4. Microorganisms	265
5. Thermodynamic Interpretation	266
6. Macroscopic Attachment	269
6.1. Life Cycles and Metamorphosis	269
6.2. Barnacles and Mussels	269
7. Physical Forces versus Behavior	275
8. Summary	276
Acknowledgment	277
References	277

Chapter 11

Wettability of Clay Minerals*Shmuel Yariv*

1. Introduction	279
2. Structure of Clay Minerals	280
2.1. The Tetrahedral Sheet	280
2.2. The Octahedral Sheet	281
2.3. The TO-Type Layer Silicates	282
2.4. The TOT-Type Layer Silicates	283

3. Wettability of the Oxygen Plane	287
3.1. The $d_{\pi}-p_{\pi}$ Bond	287
3.2. The Double Bond Character of the Si—O Bond of Siloxanes in Clay Minerals	289
3.3. Wettability of Talc, Pyrophyllite, and Vermiculite	290
3.4. The Extent of the Smectite–Water Interaction	291
4. Wettability of the Hydroxyl Plane	292
5. Wettability of Broken-Bond Surfaces	293
5.1. Dissociative Chemisorption of Water	296
5.2. Adsorption of Molecular Water	297
5.3. Hydration of Sepiolite and Palygorskite	300
6. Water in the Interlayer Space of TOT Minerals	301
6.1. Swelling	301
6.2. The Fine Structure of Interlayer Water	303
6.3. Acidic and Basic Properties of the Interlayer Space	312
6.4. Stages of Hydration of the Interlayer Space	316
7. Intercalated Water in Kaolinite	321
Acknowledgment	323
References	323

Chapter 12

Penetration and Displacement in Capillary Systems

Abraham Marmur

1. Introduction	327
2. Equilibrium Conditions of Interfaces	329
2.1. The Contact Angle	329
2.2. The Pressure Difference across an Interface	333
3. Equilibrium in Capillary Systems	333
3.1. The Cylindrical Capillary	334
3.2. Equilibrium and Hysteresis in Porous Media	339
4. Kinetics of Penetration	348
4.1. The Cylindrical Capillary	348
4.2. Kinetics of Penetration into Porous Media	353
5. Concluding Remarks	355
References	356

Chapter 13

The Wetting Behavior of Fibers

Willard D. Bascom

1. Introduction	359
2. Theory	359
3. Measurement Techniques	362
3.1. Goniometry	362

3.2. Drop Shape	362
3.3. Meniscus Shape	363
3.4. Flotation	363
3.5. Tensiometry (Wilhelmy Plate Method)	365
4. Experimental Observations	369
4.1. Static Contact Angles	369
5. Conclusions	371
Acknowledgment	372
References	372

Chapter 14

Wettability Phenomena and Coatings

Clifford K. Schoff

1. Introduction	375
2. Consequences of Poor Wetting or Dewetting	376
2.1. Introduction	376
2.2. Substrates	376
2.3. Pigments	376
3. Substrate Wetting	377
3.1. Introduction	377
3.2. Wettability Tests	377
3.3. Dewetting Tests	383
3.4. Other Characterization Methods	384
3.5. Dynamic Surface Tension Effects	385
3.6. Viscosity Effects	385
3.7. Miscellaneous Effects	386
3.8. Techniques Used To Improve Substrate Wetting	387
4. Pigment Wetting	388
4.1. The Importance of Pigments	388
4.2. The Process of Pigment Dispersion	388
4.3. Wetting of the Pigment Powder	389
4.4. Pigment Wettability Testing	391
4.5. Improvement of Pigment Wetting	392
5. Conclusions	393
References	394

Chapter 15

Spreading on Liquids: Effect of Surface Tension Sinks on the Behavior of Stagnant Liquid Layers

Eli Ruckenstein, D. G. Suci, and O. Smigelschi

1. Introduction	397
2. Effect of Surface Tension Sinks on Stagnant Liquid Films	398
2.1. Experimental	398

2.2. Results	399
2.3. Discussion	400
3. Study of the Pure Marangoni Effect	401
3.1. The Steady Dissolving Drop	402
3.2. Steady Heat Source	411
4. Mass Transfer Enhancement due to Surface Movements Produced by a Dissolving Liquid	414
4.1. Mass Transfer Measurements	414
4.2. Theory	414
4.3. Comparison between Experiment and Theory	415
5. Additional Experimental Observations	416
5.1. The Dissolving Film	416
5.2. Movements of the Free Surface	419
5.3. Movements within the Water Layer	421
Notation	421
References	422

Chapter 16

Nucleation on Smooth Surfaces*Joseph L. Katz, Jin Sheng Sheu, and Jer Ru Maa*

1. Introduction	423
2. Model	423
3. Relationship of the Variables	425
4. Homogeneous Nucleation	425
5. Growth of Clusters	429
6. Critical Supersaturation	430
7. Conclusions	432
Acknowledgment	432
Appendix	432
References	434

Index	435
