<i>Preface</i>	<i>page ix</i>
----------------	----------------

Part I Background	1
--------------------------	----------

1 Introduction	3
-----------------------	----------

1.1 Introduction	3
1.2 Cellular materials in nature	4
1.2.1 Microstructure	4
1.2.2 Function and performance	6
1.2.3 Applications for the mechanics of natural cellular materials	8
1.3 Cellular materials in medicine	10
1.4 Overview of the book	12
References	12

2 The materials of nature	14
----------------------------------	-----------

2.1 Introduction	14
2.2 Basic building blocks: proteins, polysaccharides and minerals	14
2.2.1 Structural proteins	14
2.2.2 Polysaccharides	18
2.2.3 Minerals	20
2.2.4 Data for the basic building blocks	21
2.3 The materials of nature	22
2.4 Overview of properties	24
2.5 Summary	28
References	29

3 Structure and mechanics of cellular materials	31
--	-----------

3.1 Introduction	31
3.2 Two-dimensional cellular solids (honeycombs)	34
3.2.1 In-plane loading	34
3.2.2 Out-of-plane loading	43
3.3 Three-dimensional cellular solids (foams)	44
3.3.1 Linear elasticity	44
3.3.2 Compressive strength	46

3.3.3	Densification	49
3.3.4	Fracture toughness	50
3.3.5	Time-dependent behavior	51
3.3.6	Fatigue	53
3.3.7	Fluid-flow through open-cell foams	55
3.3.8	Closed-cell foams containing a gas or a liquid	56
3.3.9	Stretch-dominated structures	57
3.4	The mechanics of structural members with cellular materials	59
3.4.1	Sandwich structures	59
3.4.2	Circular sections with a radial density gradient	63
3.4.3	Cylindrical shells with uniform compliant cores	64
3.5	Material design in engineering and nature	69
3.6	Summary	73
	Appendix: Deriving material indices	73
(a)	Minimizing mass: a light, stiff tie-rod	73
(b)	Minimizing mass: a light, stiff panel	75
(c)	Minimizing mass: a light, stiff beam	76
	References	79

Part II Cellular materials in nature **83**

4 Honeycomb-like materials in nature **85**

4.1	Introduction	85
4.2	Wood	85
4.2.1	Introduction	85
4.2.2	Structure of wood	86
4.2.3	Young's modulus and compressive strength of wood	88
4.2.4	Fracture and toughness	97
4.2.5	Creep	106
4.2.6	Biomimicking of wood	108
4.3	Cork	110
4.3.1	Introduction	110
4.3.2	Structure of cork	111
4.3.3	Mechanical properties of cork	114
4.3.4	Uses of cork	119
4.4	Summary	122
	References	122

5 Foam-like materials in nature **126**

5.1	Introduction	126
5.2	Trabecular bone	126
5.2.1	Introduction	126

5.2.2	The structure of trabecular bone and the mechanical properties of the solid tissue	127
5.2.3	Young's modulus and strength of trabecular bone	131
5.2.4	Time-dependent behavior	141
5.2.5	Fatigue behavior	146
5.3	Plant parenchyma	149
5.4	Adipose tissue	153
5.5	Coral	155
5.6	Sponge	157
5.7	Summary	159
	References	160
6	Cellular structures in nature	166
6.1	Introduction	166
6.2	Sandwich structures	166
6.2.1	Leaves of monocotyledon plants	166
6.2.2	Sandwich structures in bones and shells	174
6.3	Circular sections with radial density gradients	178
6.3.1	Arborescent palm stems	178
6.3.2	Bamboo	186
6.4	Cylindrical shells with compliant cores: animal quills and plant stems	189
6.5	Biomimicking of natural cellular structures	194
6.6	Summary	198
	References	198
7	Property charts for natural cellular materials and their uses	202
7.1	Introduction	202
7.2	Using property charts for natural cellular materials	204
7.3	Case studies: Selection of natural materials using the property charts	213
7.3.1	Materials for oars	213
7.3.2	Archery bows	215
7.3.3	Wood for sound boards	217
7.4	Summary	218
	References	219
	Part III Cellular materials in medicine	223
8	Cellular solids as biomedical materials	225
8.1	Introduction	225
8.2	Metal foams as bone substitute materials	226
8.2.1	Tantalum foams	227

8.2.2	Titanium foams	229
8.3	Tissue engineering scaffolds	233
8.3.1	Introduction	233
8.3.2	Design requirements	235
8.3.3	Materials	236
8.3.4	Processing methods and microstructure	238
8.4	Mechanical behavior of tissue engineering scaffolds	241
8.4.1	Mechanical behavior of collagen-GAG scaffolds	241
8.4.2	Mechanical behavior of mineralized collagen-GAG scaffolds	243
8.4.3	Mechanical behavior of honeycomb-like scaffolds	247
8.5	Summary	248
	References	249
9	Interaction of biological cells with tissue engineering scaffolds	254
9.1	Introduction	254
9.2	Scaffold chemical composition	256
9.2.1	Scaffold residence time and degradation products	256
9.2.2	Integrin–ligand interactions	262
9.3	Scaffold microstructure	263
9.3.1	Two-dimensional vs. three-dimensional structures	265
9.3.2	Pore size and specific surface area	266
9.3.3	Pore shape	271
9.3.4	Permeability	271
9.4	Substrate mechanical properties	275
9.4.1	One-dimensional fibers	276
9.4.2	Two-dimensional substrates	276
9.4.3	Three-dimensional hydrogels	278
9.4.4	Three-dimensional scaffolds	280
9.4.5	Effect of force transmission through material structure: three-dimensional scaffolds	284
9.5	Multi-parameter effects	286
9.6	Summary	290
	References	290
	<i>Index</i>	305

The color plates appear between pages 246 and 247
