<i>Preface</i>	<i>xxi</i>

Part I	Introduction to biocomposites	1
1	Natural composites: structure-property relationships in bone, cartilage, ligament and tendons	3
	M. PURBRICK and L. AMBROSIO, National Research Council, Italy; M. VENTRE and P. NETTI, University of Naples 'Federico II', Italy	
1.1	Introduction	3
1.2	Bone	4
1.3	Cartilage	11
1.4	Tendons and ligaments	14
1.5	Conclusions: implications for tissue regeneration and tissue repair	18
1.6	Sources of further information	19
1.7	References	22
2	Design and fabrication of biocomposites	25
	L. K. CARDON and K. J. RAGAERT, University College Ghent – Ghent University, Belgium; and R. P. KOSTER, Delft University of Technology, The Netherlands	
2.1	Introduction	25
2.2	Production techniques for biocomposite parts	27
2.3	Conventional composite processing techniques	27
2.4	Solution-based techniques	30
2.5	Solid free-form fabrication technologies	33

vi	Contents	
2.6	Influence of processing parameters on material characteristics of biocomposites	38
2.7	Designing with biocomposites for medical applications	40
2.8	Conclusions	40
2.9	References	42
3	Hard tissue applications of biocomposites	44
	K. E. TANNER, University of Glasgow, UK	
3.1	Introduction	44
3.2	Head and neck applications	45
3.3	Axial skeleton applications	50
3.4	Advantages in the use of composites for hard tissue applications	55
3.5	Disadvantages in the use of composites for hard tissue applications	55
3.6	Future trends	55
3.7	References	56
4	Soft tissue applications of biocomposites	59
	M. SANTIN, University of Brighton, UK	
4.1	Introduction	59
4.2	Composite nature of soft tissue extracellular matrices	61
4.3	Composite biomaterials for soft tissue repair	70
4.4	Use of biocomposites in clinical intervention for soft tissue repair	80
4.5	Conclusions	90
4.6	References	92
	Part II Particular applications of biocomposites	99
5	Composite materials for bone repair	101
	L. GRØNDAHL and K. S. JACK, The University of Queensland, Australia	
5.1	Introduction	101
5.2	Component selection and general design considerations	102
5.3	Fabrication of particulate composites	106
5.4	Fabrication of nano-composites	109
5.5	Template-mediated formation of nano-composites	114
5.6	Composite scaffolds	116
5.7	Key challenges and concluding remarks	120
5.8	Sources of further information and advice	121
5.9	References	121

6	Composite coatings for implants and tissue engineering scaffolds	127
	M. WANG, The University of Hong Kong, Hong Kong	
6.1	Introduction	127
6.2	Design of composite coatings	130
6.3	Technologies for the surface modification of biomaterials	133
6.4	Composite coatings for implants	148
6.5	Composite coatings for tissue engineering scaffolds	161
6.6	Concluding remarks	167
6.7	Acknowledgements	169
6.8	References	169
7	Composite materials for spinal implants	178
	A. GLORIA, R. DE SANTIS, L. AMBROSIO, National Research Council, Italy; and F. CAUSA, University of 'Magna Graecia', Italy	
7.1	Introduction	178
7.2	Structure and function of the spine	179
7.3	Materials and design of spinal implants: the state of the art	181
7.4	Composite materials: basic concepts	185
7.5	Polymer-based composite materials for spinal implants	187
7.6	Conclusions and future trends	195
7.7	References	197
8	Composites for dental applications	201
	S. N. NAZHAT, McGill University, Canada	
8.1	Restorative dental composites	201
8.2	Matrix monomers	202
8.3	Reinforcing agents	204
8.4	Silane coupling agents	205
8.5	Classification of dental composites	205
8.6	General property requirements of dental composites	207
8.7	A brief overview of fibrous composites in dental applications	208
8.8	Conclusion	209
8.9	Sources of further information and advice	209
9	Acrylic bone cements for joint replacement	210
	S. DEB, King's College London Dental Institute, UK	
9.1	Introduction	210
9.2	Acrylic bone cement	213

viii	Contents	
9.3	Properties of acrylic bone cements	218
9.4	Radiopacifiers in bone cements	222
9.5	Antibiotic-laden bone cements	223
9.6	Composite cements	225
9.7	Conclusion	228
9.8	References	229
10	Composite materials for replacement of ligaments and tendons	234
	L. AMBROSIO, A. GLORIA, National Research Council, Italy; and F. CAUSA, University of 'Magna Graecia', Italy	
10.1	Introduction	234
10.2	Ligaments and tendons: tissue biology and anatomy	235
10.3	State of the art of proposed devices for replacement of ligaments and tendons	236
10.4	Fibre-reinforced composite materials: fundamentals and technology	237
10.5	Composite materials for tissue replacement and as scaffolds for tissue engineering	242
10.6	Conclusions and future trends	250
10.7	References	251
11	Injectable composites for bone repair	255
	P. WEISS and A. FARMI, Université de Nantes, France	
11.1	Introduction	255
11.2	Classifications of injectable bone substitute	257
11.3	Stability, rheology and injectability of injectable bone substitutes	264
11.4	Biological behaviors of injectable bone substitutes	267
11.5	Injectable bone substitutes for bone tissue engineering	268
11.6	Conclusion	269
11.7	Bibliography	270
12	Composite materials for hip joint prostheses	276
	R. DE SANTIS, A. GLORIA and L. AMBROSIO, National Research Council, Italy	
12.1	Introduction	276
12.2	Properties of the hip joint	277
12.3	Materials for hip arthroplasty	279
12.4	Composite hip	284
12.5	References	290

13	Harnessing the properties of fiber-reinforced composites in the design of tissue-engineered scaffolds	296
	A. T. DiBENEDETTO and L. PINATTI, University of Connecticut, USA	
13.1	Introduction	296
13.2	Harnessing directional properties of biomaterials	297
13.3	Morphology of load-bearing tissues	299
13.4	The designer's tools	301
13.5	In-silico computational analysis	304
13.6	Computer-aided tissue engineering	306
13.7	Case studies	307
13.8	Future trends	315
13.9	Acknowledgement	316
13.10	References	316
Part III Biocompatibility, mechanical behaviour and failure of biocomposites		323
14	The challenge of biocompatibility evaluation of biocomposites	325
	J. M. ANDERSON and G. VOSKERICIAN, Case Western Reserve University, USA	
14.1	Introduction	325
14.2	Biocompatibility and the biological environment	327
14.3	Surface effects and characterization	331
14.4	Evaluation of biocompatibility: the relevance of employed analyses	334
14.5	Surface characterization	341
14.6	Future trends	348
14.7	References	349
15	Cellular response to biocomposites	354
	P. JAYAKUMAR and L. DI SILVIO, King's College London Dental Institute, UK	
15.1	Introduction	354
15.2	Skeletal regeneration and reconstruction	355
15.3	Biocomposites	364
15.4	Cellular response and experimental testing	371
15.5	Conclusions	378
15.6	References	378

x	Contents	
16	Testing the <i>in vivo</i> biocompatibility of biocomposites	385
	R. GIARDINO, Rizzoli Orthopaedic Institute and Bologna University Medical School, Italy; M. FINI, N. NICOLI ALDINI, A. PARRILLI, Rizzoli Orthopaedic Institute, Italy	
16.1	Introduction	385
16.2	Preclinical <i>in vivo</i> experimentation: ethical and legal requirements	386
16.3	ISO 10993 and biocompatibility tests	387
16.4	Extraction and sample preparation	389
16.5	Irritation and sensitization test	389
16.6	Systemic toxicity	392
16.7	Genotoxicity, carcinogenicity, reproductive and development toxicity	393
16.8	Hemocompatibility	394
16.9	Tests for local effects after implantation	395
16.10	Biocompatibility evaluation in pathological conditions	402
16.11	Biofunctionality	404
16.12	References	407
17	The mechanics of biocomposites	411
	L. NICOLAIS, University of Naples 'Federico II', Italy; and A. GLORIA and L. AMBROSIO, National Research Council, Italy	
17.1	Introduction	411
17.2	Basic concepts in designing composite materials: lamina and laminate properties	413
17.3	Short-fibre composites	423
17.4	Particulate composites	426
17.5	Polymer nanocomposites	431
17.6	Conclusions	437
17.7	References	438
18	Tribology of biocomposites	441
	S. KANAGARAJ, Indian Institute of Technology, Guwahati, India; and M. S. A. OLIVEIRA and J. A. DE OLIVEIRA SIMÕES, University of Aveiro, Portugal	
18.1	Introduction	441
18.2	Experimental consideration on tribological characterization of composites	443
18.3	Tribology of polymer composites	444
18.4	Conclusion	460

18.5	Acknowledgements	460
18.6	References	460
19	Fatigue behaviour of biocomposites A. PEGORETTI, University of Trento, Italy	465
19.1	Introduction	465
19.2	Fundamentals of fatigue failure in polymer composites	466
19.3	Fatigue behaviour of biocomposites for hard tissue applications	473
19.4	Fatigue behaviour of biocomposites for soft tissue applications	491
19.5	References	495
Part IV The future for biocomposites		507
20	Nanostructured biocomposites for tissue engineering scaffolds D. MENG and A. R. BOCCACCINI, Imperial College London, UK	509
20.1	Introduction	509
20.2	Processing of 2D topographies for assembly of 3D (biocomposite) structures	513
20.3	Direct fabrication of surface nanotopographies in 3D structures	516
20.4	Bio-nanocomposites: nanoparticles, nanotubes and nanofibres	520
20.5	Sol-gel, direct growth and biomimetic approaches	534
20.6	Bottom-up approaches	536
20.7	Conclusions and future trends	537
20.8	References	538
21	Developing biocomposites as scaffolds in regenerative medicine A. TAMPIERI, S. SPRIO, E. LANDI and M. SANDRI, National Research Council, Italy	547
21.1	Introduction	547
21.2	The new approach for developing biocomposites	549
21.3	Bio-hybrid composites for bone-like scaffold	550
21.4	Scaffolds with hierarchically organized structure: inspiration from nature.	558
21.5	Development of the three-layered osteochondral scaffold	562
21.6	Future trends	565

xii	Contents	
21.7	Acknowledgements	567
21.8	References	568
22	Developing targeted biocomposites in tissue engineering and regenerative medicine	573
	J. A. PLANELL and M. NAVARRO, Institute for Bioengineering of Catalonia (IBEC), Spain	
22.1	Introduction	573
22.2	Cell/material interactions	576
22.3	Physical aspects of materials in tissue engineering	578
22.4	Chemical aspects of materials in tissue engineering	581
22.5	Specific processes in regenerative medicine	584
22.6	Conclusions	588
22.7	References	588
23	Ethical issues affecting the use of biocomposites	593
	L. TROMMELMANS and K. DIERICKX, Centre for Biomedical Ethics and Law, Belgium	
23.1	Introduction	593
23.2	Developments in biomedical composites	595
23.3	Ethical challenges in the development of biomedical composites: risks, benefits and safety	597
23.4	Therapy or enhancement?	603
23.5	Implications of the application of biocomposites in therapy	605
23.6	Conclusion	607
23.7	References	608
