Preface

xiii

Chapter 1: Compressive strength of laminated composites: on application of the continuum fracture theory

<i>I. A. Guz & C. Soutis</i>	1
1 Introduction	1
2 The model of a piecewise-homogeneous medium	4
2.1 "Exact approach and appropriate models"	4
2.2 Problem statement for incompressible composites undergoing large deformations	6
2.3 Characteristics determinants	8
3 Asymptotic analysis	13
3.1 The long-wave approximations (transition to the continuum theory)	13
3.2 Analysis of the equations for different modes of stability loss	14
4 Accuracy of the continuum theory for hyperelastic non-linear materials with a neo-Hookean potential	16
4.1 Treloar's potential	16
4.2 Results and discussion	17
5 Conclusions	21

Chapter 2: Macroscopic crack propagation due to stress-corrosion cracking in unidirectional GRP composites: micromechanical theory and its application

<i>H. Seking</i>	25
1 Introduction	25
2 Micromechanical theory of macroscopic crack propagation due to stress-corrosion cracking	26
3 Discussion	33
3.1 Verification by experiment	33
3.2 Macroscopic crack propagation rate for the limiting values of θ_0	34
3.3 Power and coefficient of rate in simple power law [34, 35]	35
3.4 Macroscopic crack propagation rate in aligned short GFRP composites	37
3.5 Effect of matrix bridging on macroscopic crack propagation rate	37
4 Application to estimating failure times of GFRP composite structures	40
4.1 Unidirectional GFRP composite plates	40
4.2 $(0/90)_n$ cross-ply GFRP composite laminates	41

5 Conclusions	44
---------------------	----

Chapter 3: Damage mechanisms in pultruded unidirectional fiber reinforced composites under static and fatigue loads

<i>L. Vergani</i>	49
1 Introduction	49
1.1 Reinforcement material supply	51
1.2 Die	51
1.3 The pulling mechanism	53
2 Mechanical characteristics	53
2.1 Material	53
2.2 Static mechanical characteristics	54
3 Experimental tests	55
3.1 Tensile tests	55
3.2 Compression tests	56
4 Microscopic examination	57
4.1 Microscopic examination in the material not loaded	57
4.2 Black specimens	58
4.3 Compression tests	59
5 Fatigue tests	60
5.1 Effect of the stress ratio and of the gripping conditions	61
5.2 Effect of temperature and frequency	65
6 Fatigue damage	65
6.1 Stiffness measurements	66
6.2 Microscopical damage	68
7 Conclusions	70

Chapter 4: Fatigue damage of particle reinforced metal matrix composites

<i>F. Ellyin, Z. Xia & C.-S. Li</i>	73
1 Introduction	73
2 Uniaxial and multiaxial stress-strain relations	74
2.1 Experimental observations	74
2.2 Prediction of mechanical properties by using representative volume elements	79
3 Effect of inhomogeneity on the fatigue behavior of PMMCs	83
3.1 Inhomogeneous particle size and shape	83
3.2 Inhomogeneous particle distribution in PMMCs	84
3.3 Effect of clustering distribution on monotonic mechanical behavior	84
3.4 Effect of clustering distribution on fatigue properties of PMMCs	85
3.5 Integrated modeling of inhomogeneous distribution of particles undergoing localized damage	86
4 Multiaxial fatigue damage mechanisms and micro-macro correlation of PMMCs	87
4.1 Effect of multiaxial stress state on the fatigue damage in PMMCs	87
4.2 Micro-damage criteria for PMMCs	88
4.3 Micro-macro correlation for PMMCs undergoing multiaxial damage	88
5 Short and long crack growth	89
5.1 Short crack growth	89

5.2 Long crack growth.....	92
5.3 Crack-phrease diagram of PMMCs	94
5.4 Effects of particle size.....	96
6 Fatigue life.....	96
6.1 Uniaxial fatigue resistance.....	97
6.2 Multiaxial fatigue.....	98
7 Summary.....	101

Chapter 5: Modeling and prediction of the mechanical properties of woven laminates by the finite element method

<i>E. Riva & G. Nicoletto</i>	105
1 Introduction	105
2 Approaches for the mechanics of woven composites	106
3 Application of the finite element method to woven composites.....	107
3.1 Identification of a representative volume (RV).....	108
3.2 Finite element modeling of RV.....	109
3.3 Boundary conditions on RV.....	111
3.4 Constitutive laws.....	113
3.5 Modeling damage evolution	113
4 Prediction of the stiffness response	114
5 Prediction of damage evolution and strength response.....	119
6 Conclusions	122

Chapter 6: Boundary element analysis of fracture failure in anisotropic composite laminates

<i>P. Sollero, M. H. Aliabadi & E. L. Albuquerque</i>	127
1 Introduction	127
2 Anisotropic fracture mechanics	129
2.1 Stress intensity factors	130
2.2 <i>J</i> -integral technique.....	131
2.3 <i>J</i> -integral and the ratio of relative displacement technique.....	132
3 Dual boundary element method for anisotropic elastostatics	133
3.1 Elastostatic anisotropic fundamental solutions	133
3.2 Displacement equation.....	134
3.3 Traction equation	136
3.4 Discretization and crack modeling.....	138
3.5 Computation of principal-value integrals.....	139
3.6 Numerical example	143
4 Quasi-static crack propagation	144
4.1 Strain energy density criterion	145
4.2 Numerical example.....	146
5 Dual boundary element method for anisotropic elastodynamics	148
5.1 Dual reciprocity boundary element technique	148
5.2 Stress intensity factor evaluation for dynamic loading	151
5.3 Numerical example	151
6 Conclusions	153

Chapter 7: Analysis of piezoelectric composite laminates with edge delamination

<i>G. Davi, A. Milazzo & I. Benedetti</i>	157
---	-----

1	Introduction	157
2	Basic equations for piezoelectric composite laminates analysis.....	160
2.1	Piezoelectricity basic equations and notation.....	160
2.2	Governing equations for piezoelectric laminates	162
3	Boundary integral formulation	165
3.1	Reciprocity statement for piezoelectric ply.....	166
3.2	Generalized displacements boundary integral representation	166
3.3	Boundary integral equations	169
3.4	Generalized stress boundary integral representation.....	170
3.5	Fundamental solutions	170
4	Numerical model	172
4.1	Convergence analysis.....	176
5	Fundamental characteristics of piezoelectric laminates behavior	178
6	Application to the edge delamination analysis	181
7	Conclusions	183

Chapter 8: Analysis of interface cracks with contact in composites by 2D BEM

	<i>V. Mantič, A. Blázquez, E. Correa & F. París</i>	189
1	Introduction: interface cracks in fiber reinforced composites.....	189
2	Interface crack models.....	190
2.1	Isotropic bimaterials.....	192
2.2	Orthotropic bimaterials	200
2.3	Remarks on application of the interface crack models.....	203
3	Interface crack propagation and kinking	204
3.1	Crack paths in homogeneous isotropic materials	205
3.2	Interface crack paths	207
4	BEM for 2D orthotropic elasticity	216
4.1	Some basic concepts of the complex variable formulation of 2D orthotropic elasticity	217
4.2	The Somigliana displacement identity	218
4.3	The Somigliana stress identity	219
4.4	Some features of BEM implementation.....	220
5	Weak formulation of interface/contact conditions in BEM with non-conforming meshes	221
5.1	Contact conditions	221
5.2	Weak formulation of contact conditions	223
5.3	Stability conditions	225
5.4	Incremental approach.....	225
6	BEM analysis of delamination in 0°/90° laminate.....	227
6.1	Stress state at the neighbourhood of the crack tip.....	227
6.2	Energy release rate of the delamination crack	230
6.3	Concluding remarks	231
7	BEM analysis of propagation of fiber/matrix interface crack subjected to transversal load.....	232
7.1	The BEM model.....	232
7.2	The interface crack.....	233
7.3	Kinking of the interface crack.....	236
7.4	Concluding remarks.....	240
8	Conclusions	241

Chapter 9: Boundary element assessment of three-dimensional bimaterial interface cracks

<i>J. E. Ortiz & A. P. Cissilino</i>	249
1 Introduction	249
2 Crack tip field and biomaterial interfaces	251
2.1 Singular stress field.....	251
2.2 Near tip contact zone	252
2.3 Three-dimensional energy release rate.....	253
2.4 Phase angles.....	253
3 <i>J</i> -integral and stress intensity factor computation	254
3.1 The energy domain integral	254
3.2 The interaction integral	256
4 Boundary element analysis.....	257
4.1 Multidomain BEM formulation	258
4.2 Displacement derivatives, stresses and strains.....	260
4.3 Boundary element implementation	262
5 Examples	264
5.1 An external circumferential crack in a cylindrical bar.....	264
5.2 Tension panel with a slant interface crack	266
5.3 Thick tension biomaterial plate with a center interface crack.....	266
6 Application example: fiber/matrix interface crack under transverse loading.....	273
6.1 Preliminaries	273
6.2 Boundary element model	276
6.3 Results and discussion	277
7 Conclusions	283
