*Preface*

xiii

## **Chapter 1 Introductory Concepts and Definitions**

1.1	Some Definitions	1
1.2	Degree of Polymerization	7
1.3	Polymerization and Functionality	7
1.4	Why Are Synthetic Polymers Useful?	13
1.5	Copolymers	17
1.6	Molecular Architecture	21
1.7	Thermoplastics and Thermosets	23
1.8	Elastomers, Fibers, and Plastics	24
1.9	Miscellaneous Terms	27
1.10	Polymer Nomenclature	28
	References	40

## **Chapter 2 Basic Principles of Polymer Molecular Weights**

2.1	Importance of Molecular Weight Control	41
2.2	Plan of This Chapter	43
2.3	Arithmetic Mean	43
2.4	Molecular Weight Averages as Ratios of Moments	48
2.5	Breadth of the Distribution	54
2.6	Summarizing the Distribution	58

2.7	$\bar{M}_z \geq \bar{M}_w \geq \bar{M}_n$	58
2.8	Integral and Summative Expressions	58
2.9	Direct Measurements of Average Molecular Weights	60
2.10	Colligative Properties and $\bar{M}_n$	62
2.11	Virial Equations	67
	Appendix 2-I Bienaymé–Tchebycheff Inequality	69
	Appendix 2-II Molecular Weight Averages of Blends of Broad Distribution Polymers	70
	Problems	72
	References	73

### Chapter 3 Practical Aspects of Molecular Weight Measurements

3.1	$\bar{M}_n$ Methods	74
3.2	Light Scattering	82
3.3	Dilute Solution Viscometry	93
3.4	Gel Permeation Chromatography	107
	Problems	118
	References	121

### Chapter 4 Effects of Polymer Isomerism and ~~Con~~formational Changes

4.1	Constitutional Isomerism	122
4.2	Configurational Isomerism	127
4.3	Polymer Conformation	132
4.4	Molecular Dimensions in the Amorphous State	136
4.5	Rubber Elasticity	142
4.6	Rodlike Macromolecules	151
	Problems	152
	References	154

### Chapter 5 Step-Growth Polymerization

5.1	Condensation and Addition Polymers	155
5.2	Step-Growth and Chain-Growth Polymerizations	158
5.3	Requirements for Step-Growth Polymerization	161
5.4	Polymer Size and Extent of Conversion of Functional Groups in Equilibrium Step-Growth Polymerizations	166
5.5	Interfacial and Solution Polymerizations of Acid Chlorides and Other Reactive Monomers	183
5.6	Step-Growth Copolymerizations	186
	Problems	187
	References	190

**Chapter 6 Free Radical Polymerization**

6.1	Scope	191
6.2	Polymerizability of Monomers	191
6.3	Overall Kinetics of Radical Polymerization	193
6.4	A Note on Termination Rate Constants	201
6.5	Methods of Producing Radicals	202
6.6	Length of the Kinetic Chain and Number Average Degree of Polymerization of the Polymer	209
6.7	Modes of Termination	210
6.8	Chain Transfer	211
6.9	Inhibition and Retardation	222
6.10	Readily Observable Features of Free Radical Polymerizations	225
6.11	Radical Lifetimes and Concentrations	226
6.12	Determination of $k_p$ and $k_t$	228
6.13	Deviations from Ideal Kinetics	228
6.14	Molecular Weight Distribution	231
6.15	Effects of Temperature	235
6.16	Free Radical Polymerization Processes	240
	Problems	240
	References	243

**Chapter 7 Emulsion Polymerization**

7.1	Emulsion Polymerization	244
7.2	Kinetics of Emulsion Polymerization	250
7.3	Deviations from Ideal Behavior	256
7.4	Other Ingredients in Emulsion Recipes	257
7.5	Emulsion Polymerization Processes	258
	Problems	259
	References	261

**Chapter 8 Copolymerization**

8.1	Chain-Growth Copolymerization	262
8.2	Simple Copolymer Equation	263
8.3	Copolymer Structure Inferences from Reactivity Ratios	266
8.4	Azeotropic Compositions	270
8.5	Integrated Binary Copolymer Equation	272
8.6	Determination of Reactivity Ratios	275
8.7	Multicomponent Copolymerizations	278
8.8	Sequence Distribution in Copolymers	280
8.9	Gel Formation during Copolymerization and Cross-Linking	282
8.10	Reactivities of Radicals and Monomers	285
8.11	Analysis of Reactivity Data	288
8.12	Effect of Reaction Conditions	290

8.13	Rates of Free Radical Copolymerizations	295
8.14	Alternative Copolymerization Models	297
	Problems	298
	References	301

## **Chapter 9 Ionic and Coordinated Polymerizations**

9.1	Comparison of Ionic and Free Radical Polymerizations	303
9.2	Anionic Polymerization	305
9.3	Cationic Polymerization	323
9.4	Coordination Polymerization	339
	Problems	345
	References	347

## **Chapter 10 Polymer Reaction Engineering**

10.1	Scope	348
10.2	Step-Growth Polymerizations	348
10.3	Chain-Growth Polymerizations	352
10.4	Homogeneous and Heterogeneous Polymerization Processes	353
10.5	Batch, Semibatch, and Continuous Processes	361
10.6	Polymerization Reactors	362
	Problems	371
	References	374

## **Chapter 11 Mechanical Properties of Polymer Solids and Liquids**

11.1	Introduction	375
11.2	Thermal Transitions	376
11.3	Crystallization of Polymers	379
11.4	The Glass Transition	394
11.5	Polymer Viscoelasticity	404
11.6	Dynamic Mechanical Behavior at Thermal Transitions	417
11.7	Stress–Strain Tests	420
11.8	Crazing in Glassy Polymers	423
11.9	Toughness and Brittleness	424
	Problems	425
	References	427

## **Chapter 12 Polymer Mixtures**

12.1	Compatibility	428
12.2	Thermodynamic Theories	429

Contents	<b>xi</b>
12.3 Solvents and Plasticizers	445
12.4 Fractionation	446
12.5 Practical Aspects of Polymer Blending	449
Problems	463
References	465
<b>Appendix</b>	<b>466</b>
<i>List of Symbols</i>	467
<i>Index</i>	475
