| <b>Chapter 5. Measuring and Modeling Growth of a Cell Population .....</b>                | <b>53</b>     |
| 5.1 Background .....                                                                      | 53            |
| 5.2 Learning Objectives .....                                                             | 57            |
| 5.3 Overview of Experiment .....                                                          | 57            |
| 5.4 Safety Notes .....                                                                    | 57            |
| 5.5 Materials .....                                                                       | 58            |
| 5.5.1 Reagents and Consumables .....                                                      | 58            |
| 5.5.2 Equipment and Supplies .....                                                        | 59            |
| 5.6 Recipes .....                                                                         | 59            |
| 5.7 Methods .....                                                                         | 59            |
| 5.7.1 Session 1: Initiate the Cell Cultures .....                                         | 59            |
| 5.7.2 Sessions 2–8: Terminate the Cultures .....                                          | 61            |
| 5.7.3 Final Session: Perform the PicoGreen® Assay .....                                   | 62            |
| 5.8 Data Processing and Reporting .....                                                   | 63            |
| 5.9 Prelab Questions .....                                                                | 64            |
| 5.10 Postlab Questions .....                                                              | 65            |
| References .....                                                                          | 65            |
| <br><b>Chapter 6. Purification of a Cell Population Using Magnetic Cell Sorting .....</b> | <br><b>67</b> |
| 6.1 Background .....                                                                      | 67            |
| 6.2 Learning Objectives .....                                                             | 69            |
| 6.3 Overview of Experiment .....                                                          | 71            |
| 6.4 Safety Notes .....                                                                    | 71            |
| 6.5 Materials .....                                                                       | 71            |
| 6.5.1 Reagents and Consumables .....                                                      | 71            |
| 6.5.2 Equipment and Supplies .....                                                        | 73            |
| 6.6 Recipes .....                                                                         | 73            |
| 6.7 Methods .....                                                                         | 73            |
| 6.7.1 Session 1: Sort Cells .....                                                         | 73            |
| 6.8 Data Processing and Reporting .....                                                   | 75            |
| 6.9 Prelab Questions .....                                                                | 76            |
| 6.10 Postlab Questions .....                                                              | 77            |
| References .....                                                                          | 78            |
| <br><b>Chapter 7. Decellularized Matrices for Tissue Engineering .....</b>                | <br><b>79</b> |
| 7.1 Background .....                                                                      | 79            |
| 7.2 Learning Objectives .....                                                             | 80            |
| 7.3 Overview of Experiment .....                                                          | 80            |
| 7.4 Safety Notes .....                                                                    | 81            |

7.5 Materials ..... 81

7.5.1 Reagents and Consumables..... 81

7.5.2 Equipment and Supplies ..... 82

7.6 Recipes ..... 82

7.7 Methods..... 83

7.7.1 Session 1: Prepare Samples and Begin the Decellularization  
Process ..... 83

7.7.2 Session 2: Embed Samples for Sectioning on the Cryostat ..... 84

7.7.3 Session 3: Cryosection Samples..... 85

7.7.4 Session 4: Perform Histology..... 86

7.8 Data Processing and Reporting..... 87

7.9 Prelab Questions ..... 87

7.10 Postlab Questions..... 88

|       |                                                                       |     |
|-------|-----------------------------------------------------------------------|-----|
| 9.6   | Recipes .....                                                         | 103 |
| 9.7   | Methods.....                                                          | 104 |
| 9.7.1 | Session 1: Prepare Scaffolds .....                                    | 104 |
| 9.7.2 | Session 2: Seed Cells .....                                           | 104 |
| 9.7.3 | Session 3: Digest Cell-Seeded Scaffolds and<br>Cell Suspensions ..... | 105 |
| 9.7.4 | Session 4: Quantify Cell Attachment .....                             | 106 |
| 9.8   | Data Processing and Reporting.....                                    | 106 |
| 9.9   | Prelab Questions .....                                                | 107 |
| 9.10  | Postlab Questions .....                                               | 108 |
|       | References .....                                                      | 108 |

## **Chapter 10. Cell Patterning Using Microcontact Printing .....** 109

|        |                                                 |     |
|--------|-------------------------------------------------|-----|
| 10.1   | Background .....                                | 109 |
| 10.2   | Learning Objectives .....                       | 111 |
| 10.3   | Overview of Experiment.....                     | 111 |
| 10.4   | Safety Notes .....                              | 112 |
| 10.5   | Materials .....                                 | 112 |
| 10.5.1 | Reagents and Consumables.....                   | 112 |
| 10.5.2 | Equipment and Supplies .....                    | 113 |
| 10.6   | Recipes .....                                   | 113 |
| 10.7   | Methods.....                                    | 114 |
| 10.7.1 | Session 1: Fabricate the PDMS Stamps .....      | 114 |
| 10.7.2 | Session 2: Microcontact Print the Laminin ..... | 114 |
| 10.7.3 | Session 3: Pattern the Cells.....               | 116 |
| 10.7.4 | Session 4: Image the Patterned Cells.....       | 116 |
| 10.8   | Data Processing and Reporting.....              | 117 |
| 10.9   | Prelab Questions .....                          | 117 |
| 10.10  | Postlab Questions .....                         | 118 |
|        | References .....                                | 118 |

## **Chapter 11. Measuring and Modeling the Motility of a Cell Population Using an Under-Agarose Assay .....** 121

|        |                                             |     |
|--------|---------------------------------------------|-----|
| 11.1   | Background .....                            | 121 |
| 11.1.1 | Signals That Direct Cell Migration .....    | 121 |
| 11.1.2 | In Vitro Migration Assays .....             | 122 |
| 11.1.3 | Modeling Cell Motility .....                | 123 |
| 11.1.4 | Measuring Cell Motility .....               | 126 |
| 11.1.5 | Platelet-Derived Growth Factor (PDGF) ..... | 126 |
| 11.2   | Learning Objectives .....                   | 127 |
| 11.3   | Overview of Experiment.....                 | 128 |
| 11.4   | Safety Notes .....                          | 128 |

|        |                                                                 |     |
|--------|-----------------------------------------------------------------|-----|
| 11.5   | Materials .....                                                 | 128 |
| 11.5.1 | Reagents and Consumables.....                                   | 128 |
| 11.5.2 | Equipment and Supplies .....                                    | 128 |
| 11.6   | Recipes .....                                                   | 129 |
| 11.7   | Methods.....                                                    | 129 |
| 11.7.1 | Session 1: Prepare the Agarose Plates .....                     | 129 |
| 11.7.2 | Session 2: Seed the Cells to Initiate the Migration Assay ..... | 130 |
| 11.7.3 | Session 3: Document Cell Motility .....                         | 131 |
| 11.8   | Data Processing and Reporting.....                              | 131 |
| 11.9   | Prelab Questions .....                                          | 133 |
| 11.10  | Postlab Questions .....                                         | 133 |
|        | References .....                                                | 133 |

## **Chapter 12. Characterizing Matrix Remodeling through Collagen Gel Contraction ..... 135**

|        |                                                              |     |
|--------|--------------------------------------------------------------|-----|
| 12.1   | Background .....                                             | 135 |
| 12.2   | Learning Objectives .....                                    | 137 |
| 12.3   | Overview of Experiment.....                                  | 137 |
| 12.4   | Safety Notes .....                                           | 137 |
| 12.5   | Materials .....                                              | 137 |
| 12.5.1 | Reagents and Consumables.....                                | 138 |
| 12.5.2 | Equipment and Supplies .....                                 | 139 |
| 12.6   | Recipes .....                                                | 139 |
| 12.7   | Methods.....                                                 | 139 |
| 12.7.1 | Session 1: Prepare Cell-Seeded Collagen Gels.....            | 139 |
| 12.7.2 | Session 2: Measure Gel Contraction and Cell Morphology ..... | 141 |
| 12.8   | Data Processing and Reporting.....                           | 141 |
| 12.9   | Prelab Questions .....                                       | 142 |
| 12.10  | Postlab Questions .....                                      | 143 |
|        | References .....                                             | 144 |

## **Chapter 13. Effect of Substrate Stiffness on Cell Differentiation ..... 145**

|        |                                   |     |
|--------|-----------------------------------|-----|
| 13.1   | Background .....                  | 145 |
| 13.2   | Learning Objectives .....         | 147 |
| 13.3   | Overview of Experiment.....       | 148 |
| 13.4   | Safety Notes .....                | 149 |
| 13.5   | Materials .....                   | 150 |
| 13.5.1 | Reagents and Consumables.....     | 150 |
| 13.5.2 | Equipment and Supplies .....      | 150 |
| 13.6   | Recipes .....                     | 151 |
| 13.7   | Methods.....                      | 151 |
| 13.7.1 | Session 1: Prepare Hydrogels..... | 151 |

|        |                                                                              |     |
|--------|------------------------------------------------------------------------------|-----|
| 13.7.2 | Session 2: Functionalize the Hydrogels with Collagen I .....                 | 152 |
| 13.7.3 | Session 3: Seed Cells onto the Functionalized Hydrogels .....                | 153 |
| 13.7.4 | Session 4: Calibrate the Microscope's Fine-Focus Knob .....                  | 154 |
| 13.7.5 | Session 5: Characterize Hydrogel Dimensions and<br>Material Properties ..... | 155 |
| 13.7.6 | Session 6: Stain Cells with von Kossa's Method .....                         | 156 |
| 13.8   | Data Processing and Reporting .....                                          | 157 |
| 13.9   | Prelab Questions .....                                                       | 157 |
| 13.10  | Postlab Questions .....                                                      | 158 |
|        | References .....                                                             | 159 |

## **Chapter 14. Effect of Culture Configuration (Two versus Three Dimensions) on Matrix Accumulation ..... 161**

|        |                                                                              |     |
|--------|------------------------------------------------------------------------------|-----|
| 14.1   | Background .....                                                             | 161 |
| 14.2   | Learning Objectives .....                                                    | 163 |
| 14.3   | Overview of Experiment .....                                                 | 163 |
| 14.4   | Safety Notes .....                                                           | 163 |
| 14.5   | Materials .....                                                              | 163 |
| 14.5.1 | Reagents and Consumables .....                                               | 163 |
| 14.5.2 | Equipment and Supplies .....                                                 | 164 |
| 14.6   | Recipes .....                                                                | 164 |
| 14.7   | Methods .....                                                                | 165 |
| 14.7.1 | Session 1: Initiate the Cultures .....                                       | 165 |
| 14.7.2 | Session 2: Terminate the Cultures .....                                      | 167 |
| 14.7.3 | Session 3: Measure Glycosaminoglycan Content of the<br>Culture Digests ..... | 168 |
| 14.7.4 | Session 4: Measure DNA Content of the Culture Digests .....                  | 168 |
| 14.8   | Data Processing and Reporting .....                                          | 169 |
| 14.9   | Prelab Questions .....                                                       | 170 |
| 14.10  | Postlab Questions .....                                                      | 171 |
|        | References .....                                                             | 172 |

## **Chapter 15. Combining In Silico and In Vitro Techniques to Engineer Pluripotent Stem Cell Fate ..... 173**

|        |                                |     |
|--------|--------------------------------|-----|
| 15.1   | Background .....               | 173 |
| 15.2   | Learning Objectives .....      | 179 |
| 15.3   | Overview of Experiment .....   | 179 |
| 15.4   | Safety Notes .....             | 180 |
| 15.5   | Materials .....                | 180 |
| 15.5.1 | Reagents and Disposables ..... | 180 |
| 15.5.2 | Equipment and Supplies .....   | 181 |
| 15.6   | Recipes .....                  | 182 |

|          |                                                                                |     |
|----------|--------------------------------------------------------------------------------|-----|
| 15.7     | Methods.....                                                                   | 182 |
| 15.7.1   | Session 1: Directed Model Simulation.....                                      | 182 |
| 15.7.1.1 | Stochastic Model of Autocrine and Paracrine<br>Signaling Users Guide.....      | 183 |
| 15.7.1.2 | Investigate Model Parameters .....                                             | 185 |
| 15.7.1.3 | Investigate Niche Size Parameters .....                                        | 186 |
| 15.7.2   | Session 2: Experiment Pattern Design and Proposal.....                         | 187 |
| 15.7.3   | Session 3: Fabricate Master .....                                              | 188 |
| 15.7.4   | Session 4: Fabricate PDMS Stamp.....                                           | 190 |
| 15.7.5   | Session 5: Microcontact Printing and Stem Cell Plating.....                    | 190 |
| 15.7.6   | Session 6: Label pSTAT3 as an Indicator of Jak-Stat Pathway<br>Activation..... | 191 |
| 15.7.7   | Session 7: Complete pSTAT3 Immunostaining and Pattern<br>Assessment.....       | 193 |
| 15.8     | Data Processing.....                                                           | 194 |
| 15.9     | Prelab Questions .....                                                         | 194 |
| 15.10    | Postlab Questions .....                                                        | 194 |
|          | References .....                                                               | 195 |

## **Chapter 16. The Fahraeus–Lindqvist Effect: Using Microchannels to Observe Small Vessel Hemodynamics ..... 197**

|        |                                                              |     |
|--------|--------------------------------------------------------------|-----|
| 16.1   | Background .....                                             | 197 |
| 16.2   | Learning Objectives .....                                    | 200 |
| 16.3   | Overview of Experiment.....                                  | 201 |
| 16.4   | Safety Notes .....                                           | 203 |
| 16.5   | Materials .....                                              | 203 |
| 16.5.1 | Reagents and Consumables.....                                | 203 |
| 16.5.2 | Equipment and Supplies .....                                 | 203 |
| 16.6   | Recipes .....                                                | 203 |
| 16.7   | Methods.....                                                 | 203 |
| 16.7.1 | Session 1: Measure Cell Velocity through Microchannels ..... | 203 |
| 16.8   | Data Processing.....                                         | 205 |
| 16.9   | Prelab Questions .....                                       | 205 |
| 16.10  | Postlab Questions .....                                      | 206 |
|        | References.....                                              | 206 |

## **Chapter 17. Examining Single-Cell Mechanics Using a Microfluidic Micropipette Aspiration System .....207**

|      |                             |     |
|------|-----------------------------|-----|
| 17.1 | Background .....            | 207 |
| 17.2 | Learning Objectives.....    | 210 |
| 17.3 | Overview of Experiment..... | 211 |
| 17.4 | Safety Notes .....          | 212 |

|        |                                                 |     |
|--------|-------------------------------------------------|-----|
| 17.5   | Materials .....                                 | 212 |
| 17.5.1 | Reagents and Consumables.....                   | 212 |
| 17.5.2 | Equipment and Supplies .....                    | 212 |
| 17.6   | Recipes .....                                   | 212 |
| 17.7   | Methods.....                                    | 213 |
| 17.7.1 | Session 1: Perform Micropipette Aspiration..... | 213 |
| 17.7.2 | Troubleshooting .....                           | 215 |
| 17.8   | Data Processing.....                            | 215 |
| 17.9   | Prelab Questions .....                          | 215 |
| 17.10  | Postlab Questions .....                         | 216 |
|        | References .....                                | 216 |

## **Chapter 18.** Contribution of Tissue Composition to Bone Material Properties..... 217

|        |                                            |     |
|--------|--------------------------------------------|-----|
| 18.1   | Background .....                           | 217 |
| 18.2   | Learning Objectives.....                   | 220 |
| 18.3   | Overview of Experiment.....                | 220 |
| 18.4   | Safety Notes .....                         | 221 |
| 18.5   | Materials .....                            | 221 |
| 18.5.1 | Reagents and Disposables.....              | 221 |
| 18.5.2 | Equipment and Supplies .....               | 222 |
| 18.6   | Recipes .....                              | 222 |
| 18.7   | Methods.....                               | 222 |
| 18.7.1 | Session 1: Prepare Bone Samples .....      | 222 |
| 18.7.2 | Session 2: Test Mechanical Properties..... | 223 |
| 18.8   | Data Processing.....                       | 224 |
| 18.9   | Prelab Questions .....                     | 225 |
| 18.10  | Postlab Questions .....                    | 225 |
|        | References.....                            | 225 |

## **Chapter 19.** Technical Communication: Presenting Your Findings ..... 227

|          |                                             |     |
|----------|---------------------------------------------|-----|
| 19.1     | Introduction .....                          | 227 |
| 19.2     | Technical Reports and Journal Articles..... | 228 |
| 19.2.1   | Abstracts .....                             | 228 |
| 19.2.2   | Introduction.....                           | 228 |
| 19.2.3   | Materials and Methods .....                 | 229 |
| 19.2.4   | Results.....                                | 230 |
| 19.2.4.1 | Reporting Results as Text.....              | 230 |
| 19.2.4.2 | Reporting Results in Tables.....            | 231 |
| 19.2.4.3 | Reporting Results in Figures.....           | 231 |
| 19.2.5   | Discussion .....                            | 232 |

|                                                                                                  |                          |            |
|--------------------------------------------------------------------------------------------------|--------------------------|------------|
| 19.2.6                                                                                           | References .....         | 232        |
| 19.2.7                                                                                           | Acknowledgments .....    | 232        |
| 19.3                                                                                             | Extended Abstracts ..... | 233        |
| 19.4                                                                                             | Technical Posters .....  | 234        |
| References                                                                                       | .....                    | 235        |
